## City of Alexandria, Virginia

# Phase 3 Chesapeake Bay TMDL Action Plan for 100% Compliance

November 1, 2024

### Executive Summary

The purpose of this Phase 3 Chesapeake Bay Total Maximum Daily Load (TMDL) Action Plan (Phase 3 Action Plan) is to comply with the Registration Statement requirements in the 2023 – 2028 General Virginia Pollution Discharge Elimination System (VPDES) Permit for Discharges of Stormwater from Small Municipal Separate Storm Sewer Systems (MS4), No. VAR040057.

The City's Phase 1 Chesapeake Bay TMDL Action Plan documenting the City's proposed strategies to achieve 5% of the overall goals for total nitrogen, total phosphorus, and total suspended solids (sediment) goals, respectively, by June 30, 2018, was approved by Virginia Department of Environmental Quality (DEQ) on January 12, 2016. The City's Phase 2 Chesapeake Bay TMDL Action Plan documenting the City's proposed strategies to achieve 40% of the overall goal for total nitrogen, total phosphorus, and total suspended solids (sediment) goals, respectively, by June 30, 2018, was approved by DEQ September 24, 2019.

Total suspended solids was removed as a pollutant of concern from the MS4 general permit by DEQ and is no longer includes a required pollution targets for Phase 3. EPA evaluated Virginia's Phase III Watershed Implementation Plan December 19, 2019, and noted that the "sediment targets will not affect the BMPs called for in the WIP [Watershed Implementation Plan] and are not intended to be the driver for implementation moving forward...". This was incorporated into the updated 2023-2028 MS4 general permit through the removal of sediment as a pollution target under Part II TMDL Special Conditions A. Chesapeake Bay TMDL special condition.

This Phase 3 Action Plan has been developed to document preliminary sufficient measures to be implemented to meet the 100% compliance targets identified in the 2023-2028 MS4 general permit. The focus of this Action Plan is to provide the means and methods and a general level of effort that will be needed for the City to meet the 100% cumulative Chesapeake Bay TMDL reduction targets in the MS4 permit for phosphorus and nitrogen developed by the United States Environmental Protection Agency (EPA) in December 2010.

During the Phase 1 Action Plan, the following tasks were completed and/or documented:

- Delineation of the MS4 service area including the breakdown of pervious and impervious area;
- Calculation of the pollutant baseline loads for MS4 service area;
- Calculation of the increased pollutant loads from redevelopment projects during July 1, 2009, to June 30, 2014 where an average land cover condition greater than 16% impervious cover was used;

- Calculation of pollutant loads from Grandfathered projects that are required to be offset prior to project completion;
- Mean and methods to meet the Phase 1 target pollutant load reductions;
- Calculation of the total pollutant reductions required for Phase 1; and
- Calculation of the pollutant reductions associated with the proposed strategies and corresponding costs.

The Phase 2 Action Plan addressed pollutant reductions to meet or exceed 40% of the L2 scoping run in addition to the offsets required from July 1, 2009, to June 30, 2019 redevelopment projects and grandfathered projects. Table E1 provides a summary of the required pollutant load reductions during Phase 2.

**Table E1 – Summary of Required Reductions for Existing Sources**

<b>Pollutant</b>	<b>40% Cumulative L2 Reduction (lbs/yr)</b>	<b>2009-2019 New Sources Offsets</b>	<b>Grandfathered Offsets (lbs/yr)</b>	<b>Total Phase 2 Reductions<sup>1</sup></b>
TN	3,038.8	13.0	-30.6	<b>3,021.3</b>
TP	401.8	2.3	-8.7	<b>395.4</b>
TSS	344,775	1,911	-3,676	<b>343,010</b>

<sup>1</sup> Total reductions to be addressed by the end of the second permit cycle.

The City has an “all of the above” strategy, which is an iterative, adaptive approach that considers a range of potential strategies based on extant conditions, which enables the City to ramp up planning and design to increase the likelihood of success in achieving the reduction goals required in the third MS4 permit cycle.

Means and methods to meet the target pollutant load reduction are described in Section 9 and include the following:

- Credits for January 1, 2006, to July 1, 2009, stormwater BMPs
- Credit for post July 1, 2009, stormwater BMPs
- Projected Redevelopment
- New Regional Facilities and Retrofits
- Retrofits on City Properties
- Retrofits of City Rights-of-Way
- Tree Planting
- Urban Stream Restoration
- Public-Private Partnerships (P3s)
- Urban Nutrient Management
- Land Use Change
- Forest Buffers
- Nutrient Trading
- Bi-Lateral Trading with AlexRenew

In addition to the strategies listed above, two specific projects have been identified to meet the required reductions for the Phase 2 permit cycle. The Lake Cook Retrofit project was substantially complete in September 2018; therefore, it was moved from the end of the Phase 1 permit cycle to the Phase 2 cycle. The Ben Brenman Pond Retrofit also was completed during the Phase 2 cycle and includes modifying an existing wet pond to meet the Virginia BMP Clearinghouse guidance for a Level 2 wet pond and increasing the acreage draining to the pond. This allowed the City to take credit for the variation in the pollutant removal.

### How is pollution removed through Best Management Practices?

Best management practices (BMPs), also known as Stormwater Management Facilities (SMFs), remove pollution by allowing rainwater and snowmelt to soak into the system which helps to filter out pollutants, such as nutrients and sediment, and allow ‘treated’ water to return to waterways. Each type of BMP (i.e., wet pond, green roof, infiltration practices, etc.) uses different processes engineered to treat stormwater and are defined in the Virginia BMP Clearinghouse. Each BMP type has a specific removal efficiency assigned to it based on several factors and the associated removals are calculated using the Virginia Runoff Reduction Method which is based on the acres treated, type of area draining to the BMP, and type of practice.

Phase 2 reductions were met through the projects listed in Table E2, which includes associated pollutant reductions and estimated costs. Due to the progress made during Phase 1, the reductions in Phase 2 exceeded the required reductions as indicated in Table E3. In addition to the projects and BMPs that helped to achieve pollution reductions, three BMPs had to be removed from the City’s inventory because they were found to be removed or in major disrepair during Phase 2. These are: 1) Vegetated Roof; 2) 2010 developer-lead stream restoration on the lower portion of Strawberry Run; and 3) a StormFilter™ Stormwater Treatment System that was no longer in operation and not able to be repaired. The Credits received for these facilities were removed from BMP Warehouse; the Bay TMDL calculations; and reflected in this Phase 3 Bay TMDL Action Plan.

**Table E2 – Phase 2 Permit Cycle Pollutant Reductions and Costs**

Project or BMPs	TN Removed (lbs/yr)	TP Removed (lbs/yr)	TSS Removed (lbs/yr)	Approximate City Cost
FY2019-FY2024 BMPs <sup>1</sup>	124	44	20,499	\$0
2009-2019 New Sources Offsets <sup>2</sup>	-13	-2.3	-1,911	\$0
Grandfathered Offsets <sup>2</sup>	30.6	8.7	3,676	\$0
Lake Cook Retrofit	1,587	163.3	131,334	\$4.5M
Ben Brenman Pond Retrofit	946.4	151.3	87,734	\$3.75M
<b>TOTAL PHASE 2</b>	<b>2,675</b>	<b>365</b>	<b>241,332</b>	<b>\$8.25M</b>
<sup>1</sup> Developer bears installation and long-term operation and maintenance costs for private facilities.				
<sup>2</sup> Negative values indicate net pollutant reductions.				

Table E3 summarizes the progress achieved at the end of the Phase 2 permit cycle. Based on progress made in the first and second permit cycles, the City far exceeded the 40% pollutant reduction requirement and made substantial progress towards meeting the 100% reduction goal. This is consistent with the City’s internal goal to exceed the mandated targets to smooth the ascent of the ramp up towards the third permit cycle’s 100% cumulative reductions.

Table E3 summarizes the final progress at the end of the Phase 2 permit cycle:

**Table E3 – Phase 1 and 2 Progress**

<b>Pollutant of Concern</b>	<b>City Phase 1 &amp; 2 Actual Reductions (lbs./yr)</b>	<b>L2 Total Required Reductions (lbs./yr)</b>	<b>Percent of L2 Total Required Reductions Met</b>
TN	5,309	7,597.03	70%
TP	736	1,004.40	73%
TSS	577,797	861,937	67%

The City anticipates meeting the required reduction goals by the end of the permit cycle per the strategies provided herein. This Phase 3 Action Plan details how the City will meet these goals through credits obtained from redevelopment along with the “all of the above” strategy, an iterative, adaptive approach that considers a range of potential strategies based on extant conditions. The main strategy to meet the remainder of the nitrogen and phosphorus targets are through the anticipated availability of pollution reduction credits generated from the Alexandria Renew Enterprises – the City’s wastewater treatment authority – River Renew Combined Sewer Overflow (CSO) mitigation project (River Renew) through the use of bi-lateral trading consistent with the executed agreement between the City and Alexandria Renew. This project will capture and store combined stormwater runoff and sanitary flows during wet weather and send the captured flow to the advanced wastewater treatment plant to be treated prior to discharge.

Though there are no direct City costs associated with the Project or BMPs indicated in Table E4 for the Phase 3 pollution reduction activities, there are still associated costs. For example, the Bi-Lateral Trading project cost \$615 million and the majority will be paid for by rate payers in the City over time, in addition to funds secured at the state-level. The City is also sharing in the funding of the Landmark Redevelopment and the North Potomac Yard Redevelopment through land leases, tax incentives, Metro funding, transportation upgrades, and other means. So while there is no cost listed in the table due to the lack of direct funding, the City does provide funding and proffers to fund these projects for the pollution reduction credits.

It should also be noted that the City has identified strategies to reach 98% and 80% of the phosphorus and nitrogen goals, respectively, through the Phase 2 requirements, with this Phase 3 Action Plan including strategies to achieve 100% of the total requirements ahead of the 2028 deadline. While credits available through bi-lateral trading will be used on annual basis as needed to fill the gap, the City continues to explore opportunities through the strategies to meet the requirements of the 2028 deadline through redevelopment and retrofits.

**Table E4 – Phase 3 Permit Cycle Anticipated Pollutant Reductions**

Project or BMPs	TN Removed (lbs/yr)	TP Removed (lbs/yr)	Approximate City Cost
Lucky Run Stream Restoration	658	257	\$1.8M
Bi-Lateral Trading	1,500	500	\$0
Anticipated Annual Redevelopment through FY2028	1,036	320	\$0
<b>TOTAL PHASE 3</b>	3,194	1,077	\$1.8M

<sup>1</sup>Numbers are estimated and dependent on the performance of the tunnel and storage system.

As mentioned above, the 2023 – 2028 MS4 permit removed total suspended solids/sediment from the Chesapeake Bay TMDL special conditions. Table E5 summarizes the Phase 3 expected reductions, which account for 100% of the TN and TP goal.

**Table E5 – Phase 3 Anticipated Reductions**

Pollutant of Concern	Total Phase 1 & Phase 2 Reductions (lbs/yr)	Anticipated Phase 3 Reductions (lbs/yr)	Total Phase 1 through 3 Reductions (lbs/yr)	Total Required Reductions (lbs/yr)	Percent of Total
TN	5,309	3,194	8,503	7,597.03	112%
TP	736	1,077	1,813	1,004.40	181%

## **Introduction**

The purpose of this Phase 3 Chesapeake Bay Total Maximum Daily Load (TMDL) Action Plan is to comply with Part II A “Chesapeake Bay TMDL special condition” of the 2023 – 2028 General Virginia Pollution Discharge Elimination System (VPDES) Permit for Discharges of Stormwater from Small Municipal Separate Storm Sewer Systems (MS4), No. VAR040057 issued to the City of Alexandria (City) effective November 1, 2023. Virginia Department of Environmental Quality (DEQ) also requested a draft of Action Plan be submitted with the MS4 Permit Registration Statement that has been revised into this current version.

Effective June 31, 2024, the City achieved 101% of the 100% pollution reduction target through stormwater best management practices based on tracking phosphorus pollution (TP). This Phase 3 Action Plan provides an outline of the City’s path to achieve 100% pollution reduction goals. This action plan process began with the issuance of the 2013 – 2018 MS4 permit which required the submission and approval of a Phase 1 Chesapeake Bay TMDL Action Plan (approved by DEQ in 2016) to meet at least 5% of the targeted pollutant reductions and the subsequent issuance of the 2018 – 2023 MS4 permit requiring the submission and approval of a Phase 2 Action Plan (approved by DEQ in 2019) to meet at least a cumulative 40% of the targeted pollutant reductions.

The Phase 3 Action Plan is developed to document that sufficient measures will be implemented to meet the compliance targets identified in the 2023 – 2028 MS4 permit to demonstrate compliance with the required final 60% reductions (for a total of 100%) from existing sources as of June 30, 2009, increased loads from 2009-2019 New Sources, and increased loads from Grandfathered projects (9VAC25-870-48). The Phase 3 Action Plan includes the requisite planning items found in the 2023-2028 Permit Part II A and is developed according to the procedures provided in Virginia DEQ Guidance Memo No. 15-2005 dated May 18, 2015 (Phase 1 Guidance). In a letter dated May 2, 2018, regarding the reissuance of VPDES General Permit No. VAR040057, it was stated that while the Action Plan guidance is currently being updated, the most current guidance document is still Guidance Memo No. 15-2005.

The focus of the Phase 3 Action Plan is to provide the means and methods and a general level of effort that will be needed for the City to meet the final 60% Chesapeake Bay TMDL reduction targets in the current MS4 general permit for phosphorus and nitrogen developed by the United States Environmental Protection Agency (EPA) in December 2010. Due to the City’s approach to front load achievement through an aggressive water quality program, 101% and 80% of the TMDL targets for phosphorus and nitrogen, respectively, have been accounted for during Phase 1 and 2. While DEQ removed the requirement to continue to report on sediment removal in the 2023-2028 MS4 general permit, based on the guidance from EPA, it is of note that one hundred and twenty-four percent (126%) of the sediment target was achieved through the Phase 2 Action Plan. This Phase 3 Action Plan focuses on the remaining pollution reduction requirements for phosphorus and nitrogen.

The TMDL contains aggregate wasteload allocations (WLAs) for regulated stormwater with no specific WLAs for the City’s MS4 service area. The Virginia Chesapeake Bay TMDL Phase I Watershed Implementation Plan (WIP I) submitted by the Commonwealth to EPA on November 29, 2010, contains general requirements for permittees. The Phase II Watershed Implementation Plan (WIP II) submitted to EPA on March 20, 2012, builds on the WIP I as the state’s primary planning tool to establish strategies,

targets, and expectations for different sectors, including urban stormwater for local governments. The Phase II WIP requires the implementation of urban stormwater controls to meet specific nutrient and sediment reductions – Level 2 (L2) scoping implementation – to address the TMDL. The Draft Phase III Watershed Implementation Plan (WIP III) submitted April 5, 2019, includes new state initiatives as well as existing federal, state and local programs, and local area planning goals for unregulated areas provided by the planning district commissions and soil and water conservation districts and augmented by DEQ. The WIPs identify the use of state-issued stormwater permits – such as MS4 permits – as the tool for compliance by requiring target reductions for the TMDL.

The MS4 general permit reissued by DEQ, effective July 1, 2013, contained special conditions which required the implementation of strategies to meet 5% reductions of the overall L2 scoping for nitrogen, phosphorus and sediment, along with offsets for new sources and grandfathered projects. This 5% goal (Phase I) was to be implemented no later than June 30, 2018. The 2018-2023 MS4 general permit, effective November 1, 2018, requires implementation of strategies to meet an additional 35% of the L2 scoping run for a total reduction at the end of the permit term of 40% of L2. The 2023-2028 MS4 general permit, effective November 1, 2023, requires the implementation of strategies to meet the final 60% of the L2 scoping run for the final reduction at the end of 2028 of 100% of L2. Of note is the requirement to reduce total suspended solids has been removed from the permit.

According to the WIP II, WIP III, and MS4 general permit, the City would get three full MS4 general permit cycles to implement the required L2 scoping reductions (Phase 1: 2013-2018; Phase 2: 2018-2023; and Phase 3: 2023-2028). During the first cycle (Phase 1), the City was required to implement practices sufficient to achieve 5% of the reduction targets. During the second cycle (Phase 2), the City was required to implement additional practices sufficient to achieve 35% reductions for a total of 40%. Finally, the remaining 60% for the total reduction target must be achieved by 2028 (Phase 3). Pursuant to the permit, this Phase 3 Action Plan is required to address the final 60%, or Phase 3, reductions required during the permit term. While the WIP II and WIP III contain a range of strategies applicable to urban land uses, the City can only be required to implement strategies that are enforceable through the MS4 general permit based on the City's regulated land contained in the MS4 service area as defined.

The technical and fiscal challenges of meeting the Chesapeake Bay TMDL as required in the MS4 general permit are significant. Since the development of the TMDL and WIPs, the City engaged internal and external support to assist in an analysis to meet the reduction requirements and to develop a better overall understanding of the potential cost and feasibility of different combinations of stormwater best management practices (BMPs). This Phase 3 Action Plan builds on the previous technical and planning-level work, to include the previous action plans, and refines previous analysis of the potential strategies discussed by the City's internal stakeholders – the Water Quality Steering Committee and Water Quality Work Group – and external stakeholders to meet the MS4 general permit target reductions.

The “means and methods” or reduction strategies discussed require significant resources. This report focuses on strategies to meet the total 100% reduction goals that must be implemented by October 31, 2028. To get ahead of this large final push, the City set an internal goal to go beyond the permit requirements for the first and second permit cycles to achieve the escalating total reductions in the required timeframe towards meeting the overall total. Concrete strategies to achieve the final 60% are presented, with the

flexibility to choose from a menu of options as contingency measures. The City’s “all of the above” strategy is an iterative, adaptive approach that considers a range of potential strategies based on extant conditions, which enables the City to ramp up planning and design to increase the likelihood of success in achieving the reduction goals required in the third MS4 permit cycle.

Following development of the Bay TMDL and during the development of the WIPs, the City engaged in the process of planning and analyses of potential strategies, including the implementation of structural stormwater quality BMPs, towards meeting the target pollutant reductions. The first official planning-level exercise in development of the Phase 1 Action Plan began in fall 2011 with the first draft of the “Chesapeake Bay TMDL Analysis and Options” in February 2012 and the final draft in August of 2012. This planning effort focused first on the overall requirements by examining potential strategies, identifying potential gaps, and order of magnitude costs to implement the reductions. The City’s Phase 1 Action Plan – approved by DEQ on January 12, 2016 – outlined means and methods to not only meet the required 5% reduction targets but to make substantial progress in meeting the Phase 2 reduction targets. The City’s Phase 2 Action Plan (approved 2019) focused on meeting the 40% requirements in the 2018-2023 MS4 general permit. The Phase 3 Action Plan focuses on meeting 100% of the total pollution reduction goals.

The Phase 3 Action Plan:

1. Documents the progress made during the first and second permit cycles including updated calculations based on final project data;
2. Provides general information regarding the City’s process for the L2 required reductions; and
3. Outlines potential strategies that may be implemented in the 2023 – 2028 permit cycle.

This Phase 3 Action Plan includes the following sections:

- Current Program and Legal Authority
- Delineation of the MS4 Service Area
- Existing Source Loads and Calculating Target Reductions
- Increased Loads from 2009 – 2019 New Sources
- Increased Loads from Grandfathered Projects
- Estimated Future Grandfathered Projects
- Phase 1 Action Plan and Progress
- Phase 2 Action Plan and Progress
- Means and Methods to Meet Target Reductions
- Estimated Cost of Implementation

## **1. Current Program and Legal Authority**

The City takes pride in being a waterfront community on the Potomac River – the nation’s river – and understands the integral part that our water resources play in our economy, our environment and the social well-being of our community. Being a waterfront community in the Chesapeake Bay, the City has long enacted local environmental ordinances to protect our water resources. In 1992, the City incorporated requirements of the Chesapeake Bay Act for protection of land in the watershed and stormwater quality into local ordinance through Article XIII of the Zoning Ordinance – the Environmental Management

Ordinance. During the process of adopting Bay Act requirements, the City took a more conservative route and chose to be more protective by implementing 100-foot Resource Protection Area (RPA) requirements in the City, and designating all other non-RPA land acreage as Resource Management Areas (RMAs). The City exceeded the Bay Act requirements by implementing a 50-foot buffer requirement for natural intermittent streams and isolated wetlands. In addition to meeting the minimum water quality requirements for development and redevelopment, the City adopted a more stringent requirement to provide stormwater treatment for the first one-half-inch of runoff from all onsite impervious surfaces, known as the “water quality volume default”, which provides reductions beyond those mandated. The City adopted amendments to the Environmental Management Ordinance that incorporate the Virginia Stormwater Management Program (VSMP) regulations, while retaining the more stringent water quality volume default requirements and 50-foot buffer application, and currently operates the VSMP locally.

The City was initially issued an MS4 general permit in 2003 to regulate stormwater discharges. Successive five-year permits have been reissued, with the City currently regulated under the 2018-2023 MS4 general permit and the 2023-2028 MS4 general permit effective November 1, 2023. Since the Phase 2 Action Plan, there have not been any new or modified legal authorities that have been implemented to meet the City’s Chesapeake Bay required pollutant reductions.

## **2. Delineation of the MS4 Service Area**

The City’s MS4 general permit is the regulatory mechanism used to require implementation of stormwater quality BMPs or other strategies necessary to meet the Chesapeake Bay TMDL. The permit requires the City to define the size and extent of the MS4 service area, to include the existing impervious and pervious area within the service area – the regulated area. Areas of the City that sheet flow directly to waters of the state, or otherwise drain to waters of the state through means other than a regulated outfall, are not considered part of the MS4 service area – the unregulated area. Properties within the jurisdictional boundary that are regulated under a separate VPDES stormwater permit, forested areas, wetlands, and open waters are also not considered part of the MS4 service area.

As part of the Phase 1 Action Plan, areas were distinguished between regulated and unregulated land areas to define the MS4 service area. To perform this analysis, the City utilized local ArcGIS data and tools, a review of other state stormwater permits under the VPDES program, and discussions with regulating agencies. A digital elevation model (DEM) for the entire City was built using two-foot contour data. Storm sewer pipes, represented as lines, were burned into the DEM. MS4 outfall locations, stored as points in ArcGIS, were treated as small watershed outlets and the ArcGIS Desktop Hydrology toolset was utilized to generate small watersheds draining to each MS4 outfall. These small watersheds were manually reviewed and edited for greater accuracy. Finally, the breakdown of impervious and pervious area was determined by clipping the impervious surface cover to the MS4 service area, with the assumption that all non-impervious areas were pervious.

The above approach coupled with GIS impervious surface data rendered a delineation of impervious versus pervious areas within the regulated and unregulated areas. Unregulated areas include land with direct drainage to surface waters with no connection to the MS4, stream corridors, and areas covered under separate MS4 or VPDES industrial stormwater permits. The exclusion of these categories from the MS4 regulated area was initially confirmed by the Virginia Department of Conservation and Recreation

(DCR) during their previous administration of the MS4 program. Additional confirmation of this approach is provided in the Phase 1 Guidance and current 2013-2018 MS4 general permit. Federal lands not covered under a separate stormwater permit were not simply excluded but were categorized as regulated or unregulated based on this above approach. The Combined Sewer System (CSS) in the Old Town area is covered under a separate non-stormwater related VPDES permit and is considered independently of the MS4 in the Chesapeake Bay TMDL.

Lands associated with separate individual or general MS4 or industrial stormwater permits were removed from the Alexandria MS4 service area totals and are listed in Table 1.

**Table 1 – Permit Holders Excluded from MS4 Service Area**

Permit Holder	Permit
National Park Service: George Washington Parkway & Jones Point Park	MS4
Northern Virginia Community College	MS4
VDOT	MS4
United Parcel Service - Alexandria	Industrial
US Postal Service - Alexandria Vehicle Maintenance Facility	Industrial
Covanta Alexandria Arlington Incorporated	Industrial
WMATA - Alexandria Metro Rail Yard	Industrial
Virginia Paving Company Alexandria Plant	Industrial
Alexandria Renew Enterprises Wastewater Treatment Plant	Industrial
NS Thoroughbred Bulk Terminal Alexandria	Industrial

Based on the above analysis, the estimated land areas draining to the Alexandria MS4 service area, non-Alexandria MS4, and CSS is presented in Table 2. Figure 1 shows the size and extent of the delineated pervious and impervious land uses for the MS4 service area in green. A map of the MS4 service area is also available online via the [“Sewer Viewer”](#).

**Table 2 – Alexandria MS4, Non-Alexandria MS4, and CSS Land Area<sup>1</sup>**

Land Area	Impervious (ac)	Pervious (ac)	Totals (ac)
<b>Alexandria MS4 Service Area (regulated)</b>	3417.24	3991.57	7408.81
<b>CSS (regulated)</b>	398.75	177.85	576.60
<b>Non-Alexandria MS4 (unregulated)</b>	452.17	1387.68	1839.85

<sup>1</sup>Approximate acreage in Old Town – the historic portion of the City.

**Figure 1 – Regulated City of Alexandria MS4 (in Green)**

### **3. Existing Loads and Compliance Reductions**

Baseline loads for nitrogen, phosphorus, and sediment were established using the City’s impervious surface GIS data that represent the best available data for total existing acres served by the MS4 as of June 30, 2009, along with loading rate data for each pollutant of concern found in Table 2b (Potomac River Basin) of the 2013-2018 MS4 general permit. In working with the City’s consultant, AMEC Environment and Infrastructure, ALERT (AMEC Loading Estimation and Reduction Tool) was used to calculate total loads from the MS4 service area and generate spatial data to help visualize areas of higher and lower loading rates.

Total loads from existing impervious and pervious sources are presented in Table 3. Figure 2 is a “heat map” that presents existing nitrogen loads in a graphic format that was generated using ALERT. Existing loads for phosphorus and sediment will generally show similar intensity differentials. The gradient of the colors presented on the map represent the estimated intensity of nitrogen loads across the City with the darker, red color showing areas of more intense loading and lighter yellow color being less intense.

**Table 3 – Existing Source Loading Rates for Nitrogen, Phosphorus, and Sediment**

Subsource	Pollutant of Concern	Est. MS4 Service Area (ac)	Loading Rates (lbs./ac)	Load per Land Cover (lbs.)	Total Existing Load (lbs.)
Regulated Impervious	Nitrogen	3417.24	16.86	57,614.67	<b>97,809.78</b>
Regulated Pervious		3991.57	10.07	40,195.11	
Regulated Impervious	Phosphorus	3417.24	1.62	5,535.93	<b>7,172.47</b>
Regulated Pervious		3991.57	0.41	1,636.54	
Regulated Impervious	Total Suspended Solids	3417.24	1,171.32	4,002,681.56	<b>4,704,399.56</b>
Regulated Pervious		3991.57	175.8	701,718.01	

**Figure 2 – Graphic Representation of Existing Nitrogen Loads**

The Phase I WIP and MS4 general permit special conditions state that MS4 permittees will need to meet L2 scoping reduction requirements for existing sources. During the first MS4 general permit cycle (2013-2018), the L2 reduction requirements were 5% while during the second cycle, 35% reductions are required, for a total of 40%. This report focuses on the final 60%, or Phase III, reductions. The L2 reductions for total nitrogen (TN), total phosphorus (TP), and total suspended solids (TSS) applied to the regulated MS4 service area are presented in Table 4.

**Table 4 – Level 2 Reduction Requirements**

Land Cover Type	Required Reduction		
	TN	TP	TSS
<b>Regulated Impervious</b>	9.00%	16.00%	20.00%
<b>Regulated Pervious</b>	6.00%	7.25%	8.75%

Table 5 presents the total required reductions through all three permit cycles. The total loads were calculated using 2018-2023 MS4 general permit Table 3b loading rates for the Potomac River Basin and the impervious and pervious areas within the MS4 service area. Estimated total required reductions were calculated using the total L2 scoping requirements in the Phase I WIP (Table 4, above). These represent the estimated 100% target reductions to be met by the end of the third MS4 general permit cycle.

**Table 5 – Existing Source Loads and Total L2 Pollutant Reductions<sup>1</sup>**

Land Cover Type	Pollutant	Total Existing Loads (lbs)	Estimated Total Required Reductions (lbs/yr)
Regulated Impervious	TN	97,809.78	<b>7,597.03</b>
Regulated Pervious			
Regulated Impervious	TP	7,172.47	<b>1,004.40</b>
Regulated Pervious			
Regulated Impervious	TSS	4,704,399.56	<b>861,936.64</b>
Regulated Pervious			

<sup>1</sup>Approximate L2 scoping total reductions.

Table 6a presents the final estimated pollutant reductions broken out by MS4 general permit cycle based strictly on meeting 5%, 35%, and 60% (or total) of the L2 scoping requirements.

**Table 6a – Estimated Pollutant Reductions Broken Out by MS4 Permit Cycle<sup>1</sup>**

Permit Cycle	TN (lbs/yr)	TP (lbs/yr)	TSS (lbs/yr)
<b>First MS4 Cycle Target (5%)</b>	379.85	50.21	43,096.83
<b>Second MS4 Cycle Target (35%)</b>	2,658.96	351.54	301,677.82
<b>Third MS4 Cycle Target (60%)</b>	4,558.22	602.64	517,161.98 <sup>2</sup>
<b>TOTAL REDUCTION (100%)</b>	<b>7,597.03</b>	<b>1,004.40</b>	<b>861,936.64</b>

<sup>1</sup>These estimates are based on percentages of the L2 requirements.

<sup>2</sup>The 2023-2028 MS4 general permit removed the TSS requirement from the Third MS4 Cycle Target.

The 2018-2018 MS4 general permit requires the City to use permit Table 3b for the Potomac River Basin to determine the reductions required by the end of the permit cycle. For reference purposes, the 5% reduction requirements associated with the first permit cycle were TN = 379.9 lbs/ac; TP = 50.2 lbs/ac; and TSS = 43,097 lbs/ac. The second permit cycle 40% reductions can be seen in Table 6b. It should be

noted that for the City, the 2010 Census urbanized area did not change from the 2000 nor the 2020 Census urban area.

**Table 6b – Second Permit Cycle Pollutant Reductions Calculated per the MS4 Permit<sup>1</sup>**

Permit Table 3b Calculation Sheet for Estimating Existing Source Loads and Reduction Requirement for the Potomac River Basin								
		A	B	C	D	E	F	G
Pollutant	Subsource	Loading rate (lbs/ac/yr) <sup>1</sup>	Existing developed lands as of 6/30/09 served by the MS4 within the 2010 CUA (acres) <sup>2</sup>	Load (lbs/yr) <sup>3</sup>	Percentage of MS4 required Chesapeake Bay total L2 loading reduction	Percentage of L2 required reduction by 3/30/2023	40% cumulative reduction required by 6/30/2023 (lbs/yr) <sup>4</sup>	Sum of 40% cumulative reduction (lbs/yr) <sup>5</sup>
Nitrogen	Regulated urban impervious	16.86	3417.24	57,614.7	9%	40%	2,074.1	3,038.8
	Regulated urban pervious	10.07	3991.57	40,195.1	6%	40%	964.7	
Phosphorus	Regulated urban impervious	1.62	3417.24	5,535.9	16%	40%	354.3	401.8
	Regulated urban pervious	0.41	3991.57	1,636.5	7%	40%	47.5	
Total suspended solids	Regulated urban impervious	1171.32	3417.24	4,002,682	20%	40%	320,215	344,775
	Regulated urban pervious	175.8	3991.57	701,718	9%	40%	24,560	

<sup>1</sup>Edge of stream loading rate based on Chesapeake Bay Watershed Model Progress Run 5.3.2

<sup>2</sup>To determine the existing developed acres required in Column B, permittees should first determine the extent of their regulated service area based on the 2010 Census Urbanized Area (CUA). Next permittees will need to delineate the lands within the 2010 CUA served by the MS4 as pervious or impervious as of the baseline date of June 30, 2009.

<sup>3</sup>Column C = Column A x Column B

<sup>4</sup>Column F = Column C x (Column D /100) x (Column E /100)

<sup>5</sup>Column G = The sum of the subsource cumulative reduction required by 6/30/23 (lbs/yr) as calculated in Column F.

The 2023-2028 MS4 general permit requires the City to use permit Table 3b for the Potomac River Basin to determine the final 100% reductions required by the end of the permit cycle (see Table 6c). It should be noted that the Census urbanized area did not change for the City. Further, total suspended solids was removed from the MS4 general permit as a pollutant of concern and is no longer includes a required pollution target. EPA evaluated Virginia’s Phase III Watershed Implementation Plan December 19, 2019<sup>1</sup> and notes that the “sediment targets will not affect the BMPs called for in the WIP [Watershed Implementation Plan] and are not intended to be the driver for implementation moving forward...”.

<sup>1</sup> EPA Letter to DEQ, December 19, 2019. Available at <https://www.epa.gov/sites/default/files/2019-12/documents/va.pdf>

<sup>3</sup>Column C = Column A x Column B

<sup>4</sup>Column E = Column C x Column D

#### 4. Increased Loads from 2009 – 2019 New Sources

The City first adopted the Chesapeake Bay Act requirements into local ordinance in 1992. This included land protection and water quality requirements being adopted locally. The Bay Act required that post-construction stormwater quality requirements be calculated based on an average land cover condition. While localities were required to adopt the new stormwater quality requirements, they were given the option of setting the average land cover condition at 16% impervious – the calculated average for the Bay watershed – or using the existing average impervious area for a local watershed. Using the average impervious land cover condition existing in the City at that time was the most feasible alternative for urbanized communities like Alexandria. Requiring development to go back to 16% impervious cover would be overly burdensome given the existing urbanized conditions. Consistent with the Act, the City adopted a local average land cover condition of 41% impervious for post-construction stormwater quality design and required development to meet these criteria. This represented the existing condition, so that new development and redevelopment projects could not increase the pollutant load above this average. However, in addition to meeting the Bay Act stormwater requirements the City went a step further and adopted the more stringent “water quality volume default” requirements for development and redevelopment projects to also treat the first one-half inch depth of stormwater runoff over the site’s entire impervious surface – “first flush” – for post-construction stormwater design. This more stringent requirement reduced pollution beyond the 41% impervious land cover condition. The City amended Article XIII of the Zoning Ordinance (the Environmental Management Ordinance) effective July 1, 2014, to incorporate the water quality technical criteria in the Virginia Stormwater Management Regulations

(formerly 9VAC25-870, revised to 9VAC25-875). The 2018-2023 MS4 general permit Part II.A.4 requires the City to offset increased loads from new sources initiating construction between July 1, 2009 and June 30, 2019, that disturb one acre or greater and result in a total phosphorous load greater than 0.45 lbs./ac/yr. With the implementation of the July 1, 2014, stormwater regulations and the Virginia Runoff Reduction Method, the target total phosphorous loading after construction is 0.41 lbs./ac/yr or less, which is more conservative than the 0.45 lbs./ac/yr requirement. Therefore, there have been no increased loads from new sources initiating construction between July 1, 2014, to June 30, 2019. Please note that the majority of land-disturbing activities in the City do not reach the one acre or greater threshold.

The increased loads from projects that initiated construction between July 1, 2009, to June 30, 2014, were calculated for the Phase 1 Action Plan. The City used the aggregate approach discussed in the Phase 1 Guidance to determine the increased loads from projects disturbing greater than one acre. Loading rates in permit Table 3b were used to calculate the existing (pre-site) and resultant (post-site) loads for changes in impervious and pervious area as a result of these projects. The estimated full offset was calculated by subtracting the pre-site from the post-site loadings. Since 40% reductions need to be addressed during Phase 2, the required offsets were calculated as 40% of the total. Table 7 provides net change in pollutant load, required reduction for this permit cycle, and total required offset. Detailed supporting calculations for the net load change was submitted with the Phase 1 Action Plan. It should be noted that credits from BMPs installed as part of the July 1, 2009, to June 30, 2014, projects are included in the Post-2009 BMPs in Section 9.2 and are not reflected in Table 7.

**Table 7 – Increased Loads and Pollutant Reductions 2009-2019 New Sources**

Pollutant	Net Load Change (lbs/yr)*	Required Reduction during second permit cycle	Additional Red. Req. by the end of second permit cycle (lbs/yr)
Nitrogen	32.6	40%	13.0
Phosphorus	5.8	40%	2.3
Total Suspended Solids	4,778	40%	1,911

*\*Reductions for BMPs related to development and/or redevelopment projects during this time are included in the July 1, 2009 to June 30, 2014 BMP Credits.*

## 5. Increased Loads from Grandfathered Projects

The Virginia Stormwater Management Regulations (9VAC25-870-48) provides the opportunity for qualifying development and redevelopment projects to calculate post-construction stormwater quality requirements in accordance with the old water quality technical criteria in place in the City prior to the implementation of the new state stormwater requirements effective July 1, 2014. However, 2013-2018 MS4 general permit Section I.C.2.a.(8) required the City to offset increased loads from grandfathered projects disturbing one acre or greater that initiate construction after July 1, 2014.

As discussed in the previous section, the City implemented the Chesapeake Bay Act stormwater quality requirements utilizing an average land cover condition of 41% impervious. Additionally, the City continues to retain the more stringent requirement for projects to treat the first one-half inch of runoff associated with impervious surfaces – the water quality volume default. The permit requires that the City

offset the difference between the existing impervious condition of the project and the final impervious condition when applying the 41% land cover condition requirement. The City maintains a BMP database in a Microsoft Access format. Required BMP information and additional pertinent information is added to the database during the plan and construction record drawings review and approval processes. Projects where post-construction stormwater quality requirements were calculated using the old technical criteria and have not commenced construction but are certain to initiate construction during this MS4 general permit term, are labeled in the database as “planned.” Increased loads associated with planned projects disturbing equal to or greater than one acre must be offset by the City prior to completion of the grandfathered project. Given that the permit and Phase 1 Guidance do not provide details regarding what constitutes completion, this plan assumes that approval of as-built plans and certification by a professional engineer that the stormwater management BMP is functioning properly is a reasonable measure of completion for each project.

Appendix II of the Phase 1 Guidance was followed to calculate the offsets. The simple method was used to determine the loading rate from the existing pre-site impervious cover. The simple method was also used to determine the loading rate from the final or post-site impervious cover condition. The pre-site loading rate (lbs./ac/yr) was subtracted from the post site loading rate (lbs./ac/yr), and the difference was multiplied by the post site area (ac) to yield the increased load (lbs./yr). As instructed in the 2018-2023 MS4 general permit, Table 4 was used to develop the equivalent pollutant loads for nitrogen and total suspended solids. These are the loads that must be offset prior to applying the credit received for BMPs implemented for these projects. The credits for installed BMPs were calculated according to Part III of the Phase 1 Guidance using the Chesapeake Bay Program BMP efficiencies in Table V.C.1.

These Grandfathered projects generate minimal offsets, due in large part to the existing impervious cover of the site and the City’s more stringent requirements to treat the water quality volume default. Considering the most aggressive scenario that all the projects are completed before October 31, 2023, the minimal loads requiring offsetting would be in place through other strategies such as credit generated from 2006-2009 BMPs or Post-2009 BMPs discussed in Section 10. For the Phase 1 Action Plan, the City identified 14 projects implementing 25 BMPs to meet the old water quality technical criteria and the more stringent Alexandria water quality volume default. For the Phase 2 update, the City reviewed the list of these grandfathered projects and potential grandfathered projects and updated and refined the project list and corresponding pollutant calculations. There have only been two grandfathered projects constructed thus far. As often seen with development projects, many were not built due to funding issues or other complications and others lost grandfathering status. Summary calculations are presented in Table 8.

**Table 8 – Summary of Remaining Offset Loads from Grandfathered Projects**

	<b>TN (lbs/yr)</b>	<b>TP (lbs/yr)</b>	<b>TSS (lbs/yr)</b>
<b>Offset Loads to Reduce</b>	20.4	3.0	1,390
<b>Loads Removed by BMPs<sup>1</sup></b>	51.0	11.6	5,066
<b>Total Load Remaining<sup>2</sup></b>	<b>-30.6</b>	<b>-8.7</b>	<b>-3,676</b>

<sup>1</sup>These BMP reductions are not included in Post-2009 BMP credits.

<sup>2</sup>Negative values indicate net pollutant credit.

## 6. Estimated Future Grandfathered Projects

Estimated future grandfathered projects may disturb greater than one acre and qualify as future grandfathered in accordance with 9VAC25-870-48. These projects have been approved or have an obligation of funding prior to July 1, 2012, but have not received coverage under the VPDES Construction General Permit prior to July 1, 2019. It is uncertain if or when these projects may initiate construction as they all have been delayed or on hold for a significant period. The City documents six projects associated with 47 acres are considered as grandfathered and have yet to begin construction. It is likely that many of these projects will never be constructed, but the City will maintain a list of these projects until the grandfathering status expires in 2024. The list of future grandfathered projects is provided in Appendix A.

## 7. Summary of Required Phase 2 Reductions

The 2018-2023 MS4 general permit contains special conditions requiring the implementation of strategies to meet 40% reductions of the overall L2 scoping for nitrogen, phosphorus and sediment, along with offsets for new sources and grandfathered projects. This 40% goal (Phase 2) was to be implemented no later than the end of the permit cycle. Appendix B includes the BMP calculations.

Table 9 presents a summary of the required total reductions for each pollutant of concern (POC), 2009-2019 offsets, grandfathered projects, and 40% required reductions.

**Table 9 – Summary of Required Reductions for Existing Sources**

<b>Pollutant</b>	<b>40% cumulative L2 reduction (lbs/yr)</b>	<b>2009-2019 New Sources Offsets</b>	<b>Grandfathered Offsets (lbs/yr)</b>	<b>Total Phase 2 Reductions<sup>1</sup></b>
TN	3,038.8	13.0	-30.6	<b>3,021.3</b>
TP	401.8	2.3	-8.7	<b>395.4</b>
TSS	344,775	1,911	-3,676	<b>343,010</b>

<sup>1</sup> Total reductions addressed by the end of the second permit cycle.

## 8. Summary of Required Phase 3 Reductions

The 2023-2028 MS4 general permit contains special conditions requiring the implementation of strategies to meet 100% reductions of the overall L2 scoping for nitrogen and phosphorus. This 100% goal (Phase 3) is to be implemented no later than the end of the permit cycle.

Table 10 presents a summary of the required total reductions for each pollutant of concern (POC) in the permit. TSS pollution reduction requirements were removed from the 2023-2028 MS4 general permit.

**Table 10 – Summary of Required Phase 3 Reductions**

<b>Pollutant</b>	<b>100% cumulative L2 reduction (lbs./yr)</b>
TN	7,597
TP	1,004

## **9. Means and Methods to Meet Target Reductions**

The BMP strategies discussed in this Action Plan are part of the City’s “means and methods” to meet target pollutant reductions. While the WIP II and WIP III contain a range of strategies applicable to urban land uses, the City can only be required to implement strategies that are enforceable through the MS4 general permit based on the City’s regulated land contained in the MS4 service area. This Action Plan focuses specifically on means and methods to meet the 100% reduction goals that must be implemented by the end of the permit cycle.

The City has used an iterative approach in continually refining the list of potential pollutant reduction strategies through a series of planning level exercises to address meeting the TMDL target reductions. In addition to this Action Plan, this includes the following documents:

1. Chesapeake Bay TMDL Analysis and Options - Final Draft August 2012
2. The City’s February 1, 2012, response to the Virginia Department of Conservation and Recreation (DCR) “local letter” - November 9, 2011
3. Draft Chesapeake Bay TMDL Phase 1 (5%) Action Plan - June 26, 2014
4. Feasibility Study for Retrofit of Existing Ponds and Construction of New Stormwater Management Ponds” – Final December 2014
5. Final Chesapeake Bay TMDL Phase 1 (5%) Action Plan with updated attachments – February 2016
6. Draft Chesapeake Bay TMDL Phase 2 (40%) Action Plan
7. Final Chesapeake Bay TMDL Phase 2 (40%) Action Plan with updated attachments – September 2019

The City will employ a wide variety of means and methods to meet the required target pollutant for reductions total nitrogen, total phosphorus, and total suspended solids. This includes reductions to meet pollution related to:

1. Existing Sources
2. New Sources
3. Increased Loads from 2009 – 2019 New Sources
4. Increased Loads from Grandfathered Projects.

The Phase 1 Guidance stipulates BMPs implemented for credit should be in the Virginia Stormwater BMP Clearinghouse or be approved by the Chesapeake Bay Program. The City is using a menu of means and methods that fit this stipulation to meet the reduction requirements for each of the categories listed above. This type of adaptive management approach is an iterative “all of the above” strategy to identify likely

candidate projects for implementation. This approach puts the greatest number of strategies on the table and allows the City to consider all of the strategies based on conditions present at the time.

The means and methods in this Action Plan represent the synthesis of analysis and options reports, planning-level exercises, feasibility studies, and historical staff knowledge regarding project needs. In considering an iterative approach that employs adaptive management principles and retains maximum flexibility in choosing the appropriate means and methods, the City has identified numerous potential strategies to reach target reduction goals. A mix of the following strategies will be implemented, where practicable, to address the reductions due by the end of the final permit cycle.

Projected redevelopment requiring the implementation of stormwater management BMPs meeting the new technical criteria for projects initiating construction after July 1, 2014, can be credited towards reductions and reported as credits following implementation. Structural BMPs such as retrofitting existing facilities and implementing new facilities to retrofit existing impervious areas are included in the means and methods to meet reductions.

### ***Focus on Green Infrastructure***

The City recognizes that Green Infrastructure (GI) can reduce stormwater runoff volumes, peak flow, and pollutant loads. As such, GI practices is the first option in selecting BMPs to retrofit existing impervious areas. Retrofits of City properties or rights-of-way will be considered using GI approaches, including but limited to, urban bioretention, bio-swales, permeable pavers, and vegetated green roofs. The City also requires development and redevelopment projects to implement GI practices through small area planning (Old Town North Small Area Plan, Eisenhower West Small Area Plan, etc.) and through the January 2018 release of a Memorandum to Industry requiring all new development and redevelopment to use non-proprietary surface BMPs approved by the Virginia Stormwater BMP Clearinghouse (Clearinghouse) to treat a minimum of 65% of the TP removal required by the VSMP regulations incorporated into the City's zoning ordinance. The memo also prohibits MTDs from being used on single-family detached residential projects. The City continues to look for targets of opportunity to incorporate additional GI into City projects. The City's "all of the above" approach is focused on strategies that are complete, under construction, or in the design phase are listed below. However, other strategies not listed below may also be implemented.

- ***Redevelopment.*** Stormwater quality BMPs implemented to meet the new VSMP regulations, as adopted into the City's Environmental Management Ordinance effective July 1, 2014, and the City's more stringent ordinance. Note that new development also must comply with the more stringent water quality volume default and treat at least 65% of the TP removal requirement through non-proprietary surface BMPs.
- ***New Regional Facilities and Retrofits.*** Installing new facilities to treat stormwater and retrofitting existing facilities originally installed with the primary purpose of addressing stormwater quantity to enhance their ability to improve water quality.
- ***Retrofits on City Properties.*** Retrofitting City-owned properties that are currently undertreated or not treated by stormwater quality BMPs and overtreating redevelopment.
- ***Right-of-Way Retrofits.*** Retrofitting public streets, especially in coordination with Capital Improvement Program (CIP) road projects where implementation is deemed feasible.

- **Tree Planting.** Planting trees on developed land to increase tree canopy but not to mimic forest-like conditions or to plant trees within a contiguous area.
- **Urban Stream Restoration.** Restoration using natural channel design methods for urban streams.
- **Public Private Partnerships (P3).** May consist of (1) an informal arrangement for implementation of regional facilities during the development process that provide for treatment of impervious area beyond the required site area, in exchange for other onsite consideration as well as treating offsite stormwater; or (2) an agreement between the City and a private owner to construct a BMP on private property.
- **Bi-Lateral Trading.** Applying credits generated through the implementation of combined sewer overflow and wet-weather treatment controls implemented by Alexandria Renew Enterprises – the River Renew project mandated through Virginia’s 2017 CSO Law – to address the VPDES Combined Sewer System (CSS) permit requiring bacteria reductions that will also generate total nitrogen and total phosphorus credits that can be applied towards addressing MS4 general permit requirements.

The following additional strategies may be pursued by the City to address the targeted reductions; however, these are currently not part of the core strategies anticipated for Phase 3 but may be investigated during this phase.

- **Urban Nutrient Management.** Pollutant reductions from nutrient management plans implemented beyond those required by law or statute.
- **Land Use Change.** Credit for converted lands to a land use with a lower associated pollutant load.
- **Forest Buffers.** Implementing buffers and enhancing RPAs to protect local waterways and receive pollutant reduction credits.
- **Nutrient Trading.** Purchasing pollutant credits through the expanded nutrient credit exchange.

Acknowledging the significantly higher reduction requirements for the 2018-2023 and 2023-2028 permit cycles, the City set an internal planning goal for the first permit cycle that extended beyond the 5% target to approximately 15-20% of the anticipated total reductions. Similarly, the City set an internal goal for the second permit cycle that extended beyond the required 40% target. The City’s adaptive management approach allows the City to realize efficiencies through maximization of benefits and minimize of cost and external impacts. Due to the higher internal goals, the City is on track to reach the required 100% target reductions prior to the deadline of 2028. The mix of potential strategies presented above are discussed in further detail in the following sections.

## 9.1 Projected Redevelopment

Redevelopment over time is a significant opportunity for the City to achieve pollutant reductions, since corresponding pollutant reductions will be credited towards Bay TMDL targeted reductions. The City is almost completely built out and was done so largely prior to stormwater quality regulations adopted in 1992. The Virginia Stormwater Management Regulations, implemented by the City on July 1, 2014, through the updated Environmental Management Ordinance, require that all redevelopment greater than or equal to one acre must achieve a 20% reduction in phosphorus from existing site conditions. Redevelopment less than an acre must reduce phosphorus 10% from existing conditions. New development and redevelopment that is subject to these stormwater management regulations have to meet nitrogen and phosphorus loading rates associated with pervious area, or a 0.41 lbs./ac/yr TP loading rate. The City has adopted the updated Virginia Erosion and Stormwater Management Regulations into the local ordinance effective July 1, 2024 has updated this loading rate. However, this updated loading rate continues to equate to no net pollution increase and is therefore considered neutral with respect to loads. However, in addition to the state water quality standards, the City has retained the more stringent requirement of treating the first one-half inch of runoff associated with all the impervious area of the site – the water quality volume default. This more stringent requirement will continue to translate to increased reductions beyond the state minimum water quality requirements for both development and redevelopment projects.

## 9.2 New Regional Facilities and Retrofits

Several existing and potential stormwater pond sites were considered to evaluate planning-level retrofit feasibility for new or enhanced water quality benefits. The viability of retrofitting existing regional ponds and potential construction of new stormwater management ponds was addressed through a multi-year “*Feasibility Study for Retrofit of Existing Ponds and Construction of New Stormwater Management Ponds*” that was finalized December 2014. That report represents a refinement from the previous planning-level exercise for large regional projects, and provides more specificity based on the City’s Water Quality Steering Committee and Water Quality Work Group internal stakeholder discussions about viability and potential for these projects to go forward. Some barriers to implementation included minimal water quality benefits and site-specific restraints which included lack of available area, ownership and competing interests, among others. The potential strategy involves the retrofit of existing water quantity-only facilities (detention ponds) to provide water quality benefits by, enhancing the pollutant removal of an existing pond, or increasing the amount of treated impervious area draining to the facility.

For regional facilities that provide no effective water quality benefit, the improved stormwater treatment would provide a removal efficiency, and the entire associated pollutant reduction will be credited. For existing regional BMPs that are enhanced to provide an extra water quality benefit, the increased pollutant reductions will be credited. In the Phase 1 Action Plan, potential regional facilities were identified for retrofits. Five projects were completed during Phase 1 and 2 and described in Section 10 and 11. These are Four Mile Run wetland, Windmill Hill living shoreline, Lake Cook, Eisenhower Block 19 Pond, and Ben Brenman Pond (previously referred to as Cameron Station Pond). The Lucky Run stream restoration was completed during the first year of Phase 3.

### **9.3 Retrofits on City Property**

This strategy involves retrofits on City properties to treat existing impervious areas that are not currently treated by stormwater quality BMPs and overtreating when redevelopment occurs. Even prior to the Bay TMDL reduction requirements, the City actively sought opportunities to retrofit existing impervious areas on City properties to provide water quality benefits for local streams, the Potomac River, and the Chesapeake Bay. A number of these retrofits were implemented prior to June 30, 2009, and cannot be credited towards the current reduction targets. However, the City continues to look for opportunities to retrofit City properties. Treatment of these previously untreated areas are strictly retrofits and generate credits towards meeting the required reductions. During earlier planning exercises, the City refined a list of existing properties as candidates for BMP retrofits. This list of potential projects was based on the following criteria:

- 1) Greater than one-acre of untreated impervious area; and
- 2) No planned redevelopment for the property in the near term.

For planning purposes, the list of potential City properties was assumed to be retrofitted with an average type of technology for the range of BMPs that may be installed to generate pollutant reductions. For planning purposes, it is assumed that approximately 50% of existing untreated impervious area could be treated by retrofits. Also, for planning and discussion purposes, a range of technologies was assumed for implementation. Pollutant removal efficiencies for this range of technologies were derived by averaging the efficiencies for several types of BMPs that would be likely candidates for this application on City properties: Filtering Practices, Bioretention, Dry Swale and Grass Channel. The resulting average efficiencies assigned to this range of technologies is: 30% TN, 50% TP, and 60% TSS. These were used to generate possible pollutant reductions for this range of technologies that may be implemented. The identification of specific practices can then be refined during subsequent onsite planning and design when the project becomes feasible. Final retrofits implemented and the associated removal efficiencies will determine the reductions achieved.

The City is currently evaluating conducting a green infrastructure assessment for projects on City properties which would build on the analyses already completed. The study would assess, evaluate, and rank potential project sites for implementation of green infrastructure. Section 10 includes a list of completed retrofits on City properties and corresponding pollutant removals.

### **9.4 Retrofits of City Rights-of-Way**

City right-of-way retrofits is a potential strategy for treating smaller areas with each practice, but collectively may net large areas of impervious surface cover being treated. This approach has the benefit of using public property, which avoids the cost of land acquisition. These retrofits treat public spaces such as public streets and medians. Retrofits may include low impact development (LID) such as bioretention for the medians and sidewalks, inlet tree box filters or various manufactured BMPs such as hydrodynamic or filters to treat roadways. These retrofits tend to treat relatively small areas due to size constraints and gradient changes. As a result, many facilities are required to achieve meaningful reductions. Considering median retrofits in conjunction with inlet retrofits generally provides for the treatment of a greater contiguous area.

The City has identified possible medians and nearby stormwater inlets as retrofit candidates. Potential medians considered as likely candidates for retrofit were wide enough to accommodate the typical dimensions of a bioretention facility. Inlets considered were located in the vicinity of the potential median projects. The location of utilities and mature street trees were not considered and must be taken into consideration when performing more in-depth onsite investigations.

Pursuant to the City's memo to industry No. 04-2014 issued on June 1, 2014, entitled 'Treatment of Roadway Runoff Associated with Development Projects', projects are required to install BMPs to treat runoff from any new public roadways created as a consequence of development or redevelopment. This requirement serves to treat new roadways. For existing roadways within a project limit or adjacent to a project are often treated by the developer to comply with the City's more stringent water quality requirement in Sec. 13-110 of the Alexandria zoning ordinance that development and redevelopment projects must treat the first one-half inch of runoff from all impervious surfaces within the project by installing BMPs. If drainage patterns make this impractical, the project may treat adjacent existing roadways to meet this local more stringent requirement. Because of these requirements, new roadways associated with development and adjacent roadways are often treated during development and redevelopment. Additionally, based on input provided by a convened stakeholder group comprised of staff and the development community, the City's memo to industry No. 01-18 requires that at least 65% of the state's phosphorus reduction requirements be met through implementation of green infrastructure practices.

For planning purposes, acres treated and the impervious acres treated may vary since it may not be practical that the entire median area can be directed to a BMP and treated. Average efficiencies assigned to this range of technologies is: 30% TN, 50% TP, and 60% TSS. These efficiencies consider a range of technologies that may be implemented. The identification of specific practices and the target locations will be further refined during subsequent onsite planning and design. The most advantageous time to implement such practices is during planned transportation improvements. The City continues to look for ways to implement these types of retrofits through coordination with other departments and divisions during the internal planning and review process for CIP transportation projects. Implementation of retrofit practices will determine the actual pollutant loads removed to be reported.

## **9.5 Tree Planting**

The "Final Recommendation of the Expert Panel to Define BMP Effectiveness for Urban Tree Canopy Expansion" was approved in September 2016. This report includes two different implementation options for determining pollutant credits.

- Urban Tree Canopy Expansion BMP – Tree plantings on developed land (impervious or turfgrass) that result in an increase in tree canopy but are not intended to result in forest-like conditions. The pollutant reduction associated with the tree is dependent on the underlying land use.
- Urban Forest Planting BMP – Trees planted in a contiguous area with the intent of establishing a forest or similar ecosystem processes and function.

The City currently has a tree planting program and property owner can receive a tree planting credit or a tree preservation credit as part of the Stormwater Utility. The City anticipates using the expert panel guidance for the Urban Tree Canopy Expansion BMPs for pollution reductions.

## **9.6 Urban Stream Restoration**

*The Recommendations of the Expert Panel to Define Removal Rates for Individual Stream Restoration Projects* (Expert Panel Report) contains the pollutant removal computation methodologies accepted by the Chesapeake Program to address Bay TMDL reductions enforced through the City's MS4 general permit

The Four Mile Run Stream Restoration project was substantially completed in the summer of 2016 and brought online in the Phase 2 PY4 reporting period. Additional details can be found in Section 10.6 and a memorandum documenting the associated pollutant removal credits was submitted with the Phase 1 Action Plan.

### ***Lucky Run Stream Restoration***

The City received a FY2017 SLAF grant for the Lucky Run Stream Restoration project which involved restoring 950 linear feet of stream. The project is bounded by residential developments to the north and east, West Braddock Road to the west, and by Interstate 395 to the south. Lucky Run eventually outfalls to Four Mile Run, which ultimately outfalls to the Potomac River, and then the Chesapeake Bay. Approximately 224 acres of highly urban land drains to Lucky Run. The restoration reestablished a stable pattern and profile in the stream and addressed areas of severe erosion near a sanitary line and nature trail. The project was considered substantially complete in December 2023 and the pollution removals are included in Phase 3.

### ***Strawberry Run and Taylor Run Stream Restoration***

In 2018, the City completed a study to assess, evaluate, and rank five potential stream restoration projects using a decision matrix with a comprehensive list of criteria to prioritize the projects. The two top ranking projects were segments along Strawberry Run (900 feet) and Taylor Run (1,800 feet). These projects would mitigate channel and bank erosion, preventing sediment and phosphorous associated with that erosion from being delivered downstream from an actively incising urban stream. The City applied for and was awarded FY2019 SLAF grants for these two projects.

It was anticipated that the Taylor Run and Strawberry Run stream restorations would be part of the strategies to meet the 100% target reductions in the 2023 – 2028 MS4 general permit. However, in response to community pushback, the City Council 'paused' the projects in April 2021 to perform extended public engagement based on the community's concerns. The City brought in a neutral third-party to lead extended public engagement to build a consensus on the design approach for these two stream restoration projects. Each stream had a tailored list of consensus derived recommendations that went before City Council in June 2023. City Council decided to adopt the consensus approach to stabilize the exposed sanitary sewer infrastructure using a minimal approach that did not comport to the Expert Panel stream restoration approach and therefore would not earn credits towards the Bay goals. Additionally, at the June 2023 meeting, City Council decided to 'table' the Strawberry Run stream restoration project with no further action. These actions removed the projects from the planned reductions.

## 9.7 Public-Private Partnerships

The use of public-private partnerships (P3) can optimize all available technical and financial resources to reduce the cost burden borne by the City. These partnerships are often used to provide more cost-effective financial strategy to build and manage public infrastructure that can carry huge financial obligations. Examples include toll roads, military housing, and wastewater and recycling services. Historically, wastewater has been the leader in this arena related to water quality. Today, governments at all levels are considering public-private partnerships to address fiscal challenges related to the construction, operation, and maintenance of infrastructure, expansion of services, and repair of aging infrastructure. However, stormwater retrofits to meet the Bay TMDL has provided a new set of financial concerns.

Municipalities are considering this approach to help reduce costs and risks related to retrofits. Prince George's County, Maryland is pioneering this P3 effort in the region to address Bay TMDL requirements. The County has established an innovative P3 pilot program to help fund projects to retrofit of about 8,000 acres of existing impervious surfaces at an estimated cost of \$1.2B. The private partners will get paid from stormwater utility fees collected by the County that are based on impervious area, while the County may reduce its costs of the retrofit program by 40%.

While the P3 for stormwater retrofits and infrastructure is modeled on past approaches, a related but somewhat different approach being promoted by EPA through their Green Infrastructure initiative is Community Based Public-Private Partnerships (CBP3s). While a CBP3 uses many of the same financial and procurement arrangements as a traditional P3, there are differences as well. The nature of the contract, wider range of retrofit opportunities and the flexibility of the adaptive management approach are a few of the key differences. The biggest difference is the optimization of equity and the focus on the community inherent in the approach. In a CBP3, conditions must be appropriate for the community and the contractor so that both receive equitable benefits for all actions and gains from efficiencies. (EPA Region 3, April 2015)

The Prince George's P3 pilot program and the CBP3 may prove to be the most efficient and equitable models for localities trying to meet the overwhelming cost of the retrofits required by the Bay TMDL. This program is complicated, and processes are still being defined; however, these P3 and CBP3 strategies are being considered to help achieve reductions required in Phases II and III. The City will continue to monitor the effectiveness of Prince George's P3 program and stay abreast of other cases that may materialize.

Until further consideration provides for information on the suitability of a P3 or CBP3 approach, the City has taken a less formal collaborative approach. Negotiations between the City and developers may produce reduction credits beyond those required in local ordinance. This strategy may include the implementation of regional facilities during the development process that provide for treatment of impervious area beyond the required site area in exchange for other onsite considerations as well as treating offsite water. Credits generated under this strategy would be negotiated during construction and be the property of the City. Based on desktop analyses and current conditions, it was concluded that private parcels with greater than five acres of untreated impervious area could be potential candidates for the program. This threshold was chosen because the level of effort would outpace the

return on investment for parcels with smaller untreated areas. Projects which had a significant possibility of being developed between 2015 and 2028 were identified. The City may enter into discussions with these properties to determine if over treatment of the site is a possibility.

### **9.8 Urban Nutrient Management**

According to Section II.B.6.c of the MS4 general permit, the City is required to develop and implement nutrient management plans (NMPs) for lands owned and operated by the City which receive nutrients and are greater than one contiguous acre. The Commonwealth has also implemented the ban of use phosphorus-containing fertilizers during routine applications. The City does not receive pollutant reduction credits for reductions required by Virginia statute or law. However, the City can receive pollution reduction credits for the development and implementation of NMPs for unregulated lands outside the MS4 service area, on public lands less than one contiguous acre, and on private lands, other than golf courses, where nutrients are applied. (Expert Panel, March 2013)

The City has developed all necessary NMPs according to the MS4 general permit and continues to update and implement them. Following the Phase 1 Guidance and the Expert Panel report, the City is considering the feasibility for the implementation of NMPs on unregulated lands, private lands, and City lands receiving nutrients that are less than one contiguous acre. The option for residential condominiums to develop NMPs has been included as a method to receive stormwater utility fee credit. The City can receive pollution reduction credit for these non-MS4 general permit required NMPs. If additional NMPs are developed, they will be included in the City's annual report.

### **9.9 Land Use Change**

As part of the "all of the above" approach, the City will look for opportunities to receive credit for land use change conversions and apply the appropriate credit per Appendix V.G of the Guidance. This may include converting impervious to forest, impervious to grass, impervious to pervious, pervious to forest, or pervious to grass. Upon completion of a land use change BMP, the City will use the Table V.G.1 Land Use Change Conversion Efficiency table found in the Phase 1 Guidance to calculate the reductions. Pollutant reductions credited will be reported in the annual report for the appropriate period.

### **9.10 Forest Buffers**

This BMP is another tool in the "all of the above" approach and similar to the previous BMP. The City will look for opportunities to protect local waterways and create credits by implementing forest buffer BMPs and/or providing enhancements to existing RPAs. Focus will be placed on identifying areas on City properties. Credits will be calculated using the efficiencies found in Table V.H.1 of the Phase 1 Guidance and will be reported with the appropriate annual report.

### **9.11 Nutrient Trading**

The Commonwealth of Virginia allows urban stormwater to be included in the sectors that may trade nutrient credits to meet reduction requirements. The City has identified nutrient trading as a potential strategy to meet target reductions. Nutrient credits to meet overall stormwater reductions must be kept in perpetuity to meet final goals. However, wastewater dischargers currently use the program to trade

credits annually. This annual trading can also be a valuable tool to assist localities in complying with their MS4 general permits while working to implement the required reductions.

Likewise, urban stormwater pollutant reduction practices functioning beyond the pollutant reductions required in each MS4 general permit cycle generate credits in advance of permitted requirements. These credits should be available for “annual” trading in the expanded nutrient credit exchange. For instance, if the City exceeds the 40% pollutant reduction requirements for 2023, these credits should be available for the City to trade in 2023 to other permittees that may need more time to reach the required June 30, 2023 pollutant reductions. The pollutant credits would be purchased by another MS4 permittee until the City is required to use the credits per the MS4 general permit. This approach protects water quality by incentivizing early implementation of urban stormwater reduction practices and helping to ensure that the largest number of MS4 permittees are in compliance. This expansion of the program would complement the current nutrient trading program which allows for annual trading and provide sediment credits for trading.

### **9.12 Bi-Lateral Trading**

A Combined Sewer System (CSS) exists in the older historic district of the City and includes four combined sewer outfalls. The Bay TMDL assigns a wasteload allocation (WLA) to these four combined sewer overflow (CSO) outfalls (CSO 001 at Oronoco Bay, CSO 002 at Hunting Creek, and CSOs 003 and CSO 004 at Hooffs Run) for nutrients and sediment. Additionally, the Hunting Creek Bacteria TMDL assigns a WLA to three (CSO 002, CSO 003, and CSO 004) of the four CSO outfalls and requires substantial reductions that are enforced through CSO legislation enacted in 2017 (2017 CSO Law). The Virginia General Assembly enacted the 2017 CSO Law on April 26, 2017, which requires the implementation of CSO controls to address the Hunting Creek Bacteria TMDL and reduction of overflows at CSO 001 to meet the EPA CSO Control Policy Presumption Approach by July 1, 2025. In 2024, the General Assembly extended the deadline to July 1, 2026.

In response to the 2017 CSO Law, the City and AlexRenew developed a revised long term control plan update (LTCPU) to comply with the CSO reduction requirements and compliance deadline. AlexRenew owns and operates the Water Resource Recovery Facility (WRRF) which provides sanitary and combined sewage treatment services to the City and parts of Fairfax County. The LTCPU, currently known as the RiverRenew project, is constructing new sewer infrastructure to meet CSO control requirements, which includes storage and conveyance tunnels strategically coupled with AlexRenew’s WRRF, to maximize the volume of CSO flow receiving treatment. The LTCPU was approved by City Council in April 2018 and subsequently by DEQ in June 2018. The controls implemented as the result of the LTCPU will achieve substantial nitrogen, phosphorus and sediment reductions and are on schedule to be constructed by July 1, 2026.

AlexRenew and the City are working together to leverage the WRRF to achieve CSO control requirements by the extended legislative deadline and have made significant progress towards meeting this overall water quality goal. On June 6, 2018, City Council approved the Outfall Transfer Agreement between the City of Alexandria, Virginia and the City of Alexandria Sanitation Authority Concerning Wet Weather Wastewater Storage and Conveyance Facilities (Outfall Transfer Agreement). The Outfall Transfer Agreement makes AlexRenew responsible for the financing, design, construction, operation and maintenance of the RiverRenew project. (However, note that the City’s rate payers are

funding the project through increased fees.) Additionally, the Outfall Transfer Agreement outlined “Secondary Benefits” following the implementation of CSO controls with respect to the Chesapeake Bay TMDL.

On July 1 2018, the City transferred ownership of these outfalls to AlexRenew, who is now the VPDES permit holder for the outfalls. Section 15 of the Outfall Transfer Agreement states that AlexRenew will apply the Bay TMDL CSO WLAs that are in effect for nitrogen, phosphorus and sediment to any CSO overflows and to combined sewer flows that are measured, captured, and treated through AlexRenew’s WRRF once the RiverRenew project is complete. If after this analysis, allocation of nitrogen, phosphorus, and sediment remains unapplied, such credits will be calculated using AlexRenew’s actual previous year annual reported nitrogen, phosphorus and sediment performance and traded to the City for its use. As such, the City may use these credits towards meeting the Bay TMDL pollutant reductions in the MS4 general permit.

The cost of the RiverRenew project is currently \$615M, while infrastructure investments for compliance with the MS4 general permit are estimated at \$100 - \$200M. Note that the same ratepayers in the City fund the RiverRenew project as well as the MS4 capital costs to mitigate stormwater discharges. By integrating these two water quality efforts to help identify efficiencies in how to best prioritize capital investments and facilitate the use of sustainable and comprehensive solutions, the City can minimize the overall additive cost to the City ratepayers as well as funding for the Stormwater Utility fee that was adopted to fund costly stormwater infrastructure retrofits to meet MS4 general permit requirements and the Bay TMDL. Therefore, this bi-lateral trading approach will provide water quality benefits to the City’s local streams, the Potomac River and the Chesapeake Bay through maximizing the economic benefits to the City’s rate payers through the most cost-effective approach (EPA Memo, June 2012).

## **10. Phase 1 Permit Cycle Progress**

The following sections discuss the progress that the City has made in meeting the L2 Scoping Target Reductions. Each project or group of BMPs below was initially presented in the City’s Phase 1 Action Plan and is complete. The reductions for Lake Cook were added to Phase 2 due to the timing of the project. Section 10.9 summarizes the pollutant reductions for the Phase 1 permit cycle. BMP calculations are found in Appendix B.

### **10.1 Credits for 2006 – 2009 Historical Stormwater BMPs**

Structural stormwater BMPs implemented prior to January 1, 2006, are included in the calibration and baseline conditions of the Bay Model and are not available for credit towards reductions. The credits for structural BMPs implemented on or after January 1, 2006, and prior to July 1, 2009, were approved by DEQ in the Phase 1 Chesapeake Bay Action Plan. These historical BMPs were submitted by September 1, 2015, as part of the “Historical Data Clean-up” and so that they could be incorporated into the Phase 6 Chesapeake Bay Model. The Phase 1 Guidance stated that if the data submitted prior to September 1, 2015, the permittee would receive credit toward target pollutant reductions.

The City BMP database was queried for BMPs installed during this timeframe. Pollutant loads associated with the impervious and pervious area draining to project BMPs were calculated using the

Potomac River Basin loading rates from 2013-2018 Table 2b. Removal efficiencies for the BMPs were assigned using the Chesapeake Bay Program Efficiencies found in Guidance Table V.C.2. A full list of BMPs per project with all pertinent data and calculations was submitted with the Phase 1 Action Plan and can be found in Appendix B. The summary of the 2006 – 2009 BMP reductions for nitrogen, phosphorus and sediment are presented in Table 11.

**Table 11 – Reductions Achieved for 2006 – 2009 BMPs**

Number of Projects	Total Number of BMPs	TN Removed (lbs/yr)	TP Removed (lbs/yr)	TSS Removed (lbs/yr)	Approx. City Cost <sup>1</sup>
40	62	1,305.1	158.0	150,452	\$0

<sup>1</sup>Developer bears installation and long-term operation and maintenance costs for private facilities.

## 10.2 Credits for Post-2009 Stormwater BMPs

The City maintains a current digital inventory of stormwater management BMPs that are required as part of the development process or that have been implemented as retrofits on City properties. This database was used to identify and gather data on BMPs for projects initiating construction on or after July 1, 2009, which qualify for water quality treatment credit according to Part III 3 of the Guidance. In addition to the Chesapeake Bay ordinance water quality requirements, the City implemented the water quality volume default requirement for development and redevelopment during this time period. BMPs installed prior to January (Credit for BMPs installed on or after January 1, 2006, and before July 1, 2009 are discussed in Section 9.1.) An analysis was conducted to determine the total load reductions achieved by post-June 30, 2009, BMPs within the MS4 service area.

The BMP database was used to determine the acres treated per type of BMP installed after the 2009 baseline. Pollutant loads for impervious and pervious areas draining to each BMP were calculated using the Potomac River Basin loading rates. Specific BMP types and associated pollutant removal efficiencies were based on the Chesapeake Bay Program Efficiencies and Retrofit Curves data, as applicable.

Two separate calculation tables were developed:

- Table 12 with pollutant reductions associated with BMPs installed between 2009 and June 30, 2014; and
- Table 13 with pollutant reductions associated with BMPs installed between July 1, 2014, and June 30, 2018.

The differentiation was made due to the implementation of the updated VSMP regulations on July 1, 2014 and the need to compare these reductions to the increased loads from the 2009 to June 30, 2014 redevelopment projects (Section 4). The full calculation tables with the pollutant removals for the BMPs installed during these time periods can be found in the Appendix B.

**Table 12 – Reductions Achieved for July 1, 2009 – June 30, 2014 BMPs**

Total Acres Treated	Impervious Acres Treated	TN Removed (lbs/yr)	TP Removed (lbs/yr)	TSS Removed (lbs/yr)	Approx. City Cost <sup>1</sup>
230.7	165.2	610.9	117.9	125,640	\$0

<sup>1</sup>Developer bears the cost of installation and long-term operation and maintenance for private facilities.

**Table 13 – Reductions Achieved for July 1, 2014 – June 30, 2018 BMPs**

Total Acres Treated	Impervious Acres Treated	TN Removed (lbs/yr)	TP Removed (lbs/yr)	TSS Removed (lbs/yr)	Approx. City Cost <sup>1</sup>
130.28	102.78	263.4	36.7	34,583	\$0

<sup>1</sup>Developer bears the cost of installation and long-term operation and maintenance for private facilities.

### 10.3 Lake Cook, Regional Facility

Funding for the feasibility and design of Lake Cook were included in the City’s FY2013 CIP. This existing fishing pond was identified in early planning-level exercises initiated in late 2011 as a retrofit candidate, included in the City’s Response to DCR’s November 2011 Information Request, and was considered in a subsequent feasibility study initiated in March 2013. Lake Cook is an existing facility that is currently used as a fishing pond that provides water quantity only (detention). Lake Cook is being retrofitted to provide enhanced pollutant removal or to increase the capture volume and level of treatment. In December 2013, the City received a Stormwater Local Assistance Fund (SLAF) 50% matching grant from DEQ to help fund the conversions of Lake Cook from a recreational fishing lake to a stormwater management BMP. Lake Cook drains approximately 390 acres of urban land, with approximately 127 acres of the drainage area being impervious. The lake’s primary use is recreational and it is regularly stocked with fish by the Virginia Department of Game and Inland Fisheries.

A Technical Memorandum providing the approach of the planned retrofit, the calculated pollutant removal efficiencies, and the associated pollutant removal credits was submitted and approved with the Phase 1 Action Plan and included as Appendix C.

Note that the project wasn’t substantially complete until September 2018, so the associated reductions are not included in Phase 1 but with the Phase 2 pollutant reductions. Table 14 provides a summary of acres treated, pollutant reductions, and costs for this retrofit project. The total cost of the project was \$4.5M.

**Table 14 – Lake Cook Retrofit - Pollutant Reductions**

Total Acres Treated	Impervious Acres Treated	TN Removed (lbs/yr)	TP Removed (lbs/yr)	TSS Removed (lbs/yr)	Approx. City Cost <sup>1</sup>
390.3	127.5	1587.0	163.3	131,334	\$4.5M

<sup>1</sup>Value includes funds from a SLAF grant. Operation and maintenance is projected at \$103,000 annually beginning in FY 2019 with a three percent annual inflation factor included each year thereafter.

### 10.4 Eisenhower Pond 19, Regional Facility

This regional facility was constructed by the private developer of the property; however, the impervious area treated was negotiated by City staff to be greater than that required during the development review process. Any pollutant reductions beyond those required are credited towards the City’s Bay TMDL reduction requirements. Since this practice goes well beyond the reductions required for development and redevelopment, this pond is not included in the previous section as a “Credit for Post-2009 BMPs”. The pond assumes efficiencies based on the stormwater retrofit curves/equations and the runoff depth treated per impervious acre. The efficiency values of 35.0% TP; 22.2% for TN and 44.5% for TSS were subsequently derived. Table 15 presents the pollutant removal data for this regional facility. The Eisenhower Block 19 Pond was brought online in June 2015.

**Table 15 – Eisenhower Block 19 Pond – Pollutant Reductions**

Total Acres Treated	Impervious Acres Treated	TN Removed (lbs/yr)	TP Removed (lbs/yr)	TSS Removed (lbs/yr)	Approx. City Cost <sup>1</sup>
67.1	53.7	166.8	39.2	23,644	\$0

<sup>1</sup>Developer bears the cost of installation and long-term operation and maintenance. Opportunity costs for alternate uses of the land are considered inconsequential given the current use and therefore not factored into the costs.

### 10.5 Retrofits on City Properties

The City has completed several BMP retrofit projects on City properties. Table 16 presents the retrofits that have been implemented on City properties after June 30, 2009, and the related pollutant reductions. Note: This table was revised and updated in FY2025 and included in this Plan as Table 21.

**Table 16 – Retrofits on City Property – Pollutant Reductions**

Project	Total Treated (ac)	Impervious Treated (ac)	TN Removed (lbs/yr)	TP Removed (lbs/yr)	TSS Removed (lbs/yr)	Approximate Total City Cost <sup>2</sup>
Fire Station #206	0.55	0.55	2.66	0.40	515.38	\$252,240
Burke Library BMP#1	0.53	0.51	2.52	0.38	480.71	\$71,686 <sup>1</sup>
Burke Library BMP#2	0.78	0.41	2.66	0.37	299.91	\$71,686 <sup>1</sup>
Charles Barrett Elementary BMP#1	0.73	0.62	3.31	0.47	596.45	\$252,240 <sup>1</sup>
Charles Barrett Elementary BMP#2	1.62	1.38	6.42	1.05	912.24	\$252,240 <sup>1</sup>
<b>Totals</b>			<b>17.6</b>	<b>2.7</b>	<b>2,805</b>	<b>\$900,092</b>

<sup>1</sup>The total cost was evenly divided, however actual costs varied for each.

<sup>2</sup>Average operational costs based on published studies of such facilities with enhanced amenities and visibility are estimated at \$25,000 annually beginning in FY 2019, with a three percent annual inflation factor included each year thereafter.

### 10.6 Four Mile Run, Urban Stream Restoration

Following years of design, public outreach and inter-jurisdictional collaboration, the Four Mile Run Stream Restoration began construction in May 2015 and substantial completion in the Summer of 2016. The project involved a tidal wetland restoration that the City assessed using Protocol 3 – Credit

for Floodplain Reconnection Volume. The protocol provides mass sediment and nutrient reduction credit since the project will provide a reconnection of the main Four Mile Run stream channel to the floodplain over a wide range of storm events. The approach and the determination of pollutant removal credits is discussed in the Technical Memorandum submitted with the Phase 1 Action Plan and included in Appendix B. Please note that although the memo references an older version of the expert panel report, staff has reviewed the memo against the most recent expert panel report and deemed that the approach remains valid, and the calculated credits are consistent with the latest expert panel recommendations. Table 17 presents the reductions for each pollutant of concern and the approximate project cost. This project was brought online in July 2016.

**Table 17 – Four Mile Run Stream Restoration – Pollutant Reductions**

TN (lbs./yr)	TP (lbs./yr)	TSS (lbs./yr)	Approximate City Cost <sup>1</sup>
194.8	40.0	14,914	\$1.8M

<sup>1</sup>Estimate from the total costs of multiple projects in one package; construction only.

### 10.7 Windmill Hill Living Shoreline

Construction of the living shoreline at Windmill Hill Park was substantially complete in June 2018. This project was not documented during the Phase 1 Action Plan because it was not known at the time that the scope of the project would include the installation of a natural living shoreline, and the Expert Panel Report for Shoreline Management Projects had not obtained final approval. The project was initiated because of a failing bulkhead along the Potomac River at Windmill Hill Park. Several options for replacement were studied with the most cost effective and beneficial being the installation of a living shoreline. Pollutant removal calculations can be found in Table 18.

**Table 18 – Windmill Hill Living Shoreline Pollutant Reductions**

TN (lbs/yr)	TP (lbs/yr)	TSS (lbs/yr)	Approximate City Cost <sup>1</sup>
131.3	8.0	9,951	\$3.6M

<sup>1</sup>Total cost of project; construction only.

### 10.8 Phase 1 Action Plan

The Phase 1 Action Plan was approved by DEQ on January 12, 2016. Correspondence between the City and DEQ along with the Action Plan approval letter can be found in Appendix D. The following list documents the updates and additions to the anticipated Phase 1 reductions documented in the Phase 1 Action Plan:

1. The as-built conditions for Pond 19 produces pollutant reductions slightly less than the values submitted (differences of TN = -2.1 lb/yr; TP = -3.5 lb/yr; TSS = -275.3 lb/yr).
2. A summation error was discovered in the pollutant reduction table for the July 1, 2009, to June 30, 2014 BMP table. The updated values are significantly higher than what was submitted (differences of TN = 500.6 lb/yr; TP = 103.0 lb/yr; TSS = 108,589 lb/yr).
3. The inclusion of the reductions associated with the BMPs installed from July 1, 2014, to June 30, 2018 (differences of TN = 263.4 lb/yr; TP = 36.7 lb/yr; TSS = 34,583 lb/yr).

4. The list of grandfathered projects which began construction was updated and refined. There were several projects that did not move forward or were updated to use the Virginia Runoff Reduction methodology (differences of TN = -722.6 lb/yr; TP = -85.2 lb/yr; TSS = -25,798 lb/yr).
5. The pollutant reductions associated with Windmill Hill Shoreline Restoration were added (TN = 131.3 lb/yr; TP = 8.0 lb/yr; TSS = 9,951 lb/yr).
6. The pollutant reduction associated with Lake Cook Retrofit were removed and are included with the Phase 2 pollutant reductions since the project was substantially complete in September 2018. (TN = 1,587 lb/yr; TP = 163.3 lb/yr; TSS = 131,344 lb/yr).

## 10.9 Phase 1 Reductions

The following table summarizes the pollutant reductions related to the projects which have been completed, fully or substantially, by the end of the 2017-2018 permit year.

**Table 19 – Phase 1 Permit Cycle Pollutant Reductions**

Project or BMPs	TN Removed (lbs/yr)	TP Removed (lbs/yr)	TSS Removed (lbs/yr)	Approximate City Cost <sup>1</sup>
2006-2009 BMPs	1305.1	158.0	150,452	\$0
2009-2014 BMPs <sup>2</sup>	610.9	117.9	125,640	\$0
2014-2018 BMPs <sup>3</sup>	263.4	36.7	34,583	\$0
Eisenhower Pond 19 <sup>4</sup>	166.8	39.2	23,644	\$0
Retrofits on City Properties	17.6	2.7	2,805	\$900,000
Four Mile Run Restoration	194.8	40.0	14,914	\$1.8M
Windmill Hill Living Shoreline <sup>3</sup>	131.3	8.0	9,951	\$3.6M
<b>TOTAL PHASE 1</b>	<b>2,689.8</b>	<b>402.4</b>	<b>361,990</b>	<b>\$6.3M</b>

<sup>1</sup>Developer bears installation and long-term operation and maintenance costs for private facilities.

<sup>2</sup>Calculation error discovered in Phase 1 Action Plan (values have been increased by TN = 500.6 lb/yr; TP = 103.0 lb/yr; TSS = 108,589 lb/yr as compared to the Phase 1 Action Plan)

<sup>3</sup>Was not included in Phase 1 Action Plan

<sup>4</sup>Values have changed from the Phase 1 Action Plan based on the as-built survey

## 10.10 Phase 1 Reductions Update

During FY2023, two BMPs initially reported under Phase 1 were found to be removed or in major disrepair. BMP ID 2007-0102 is a Vegetated Roof and was found to be completely removed from the facility. BMP ID 2004-0038 01 is a stream restoration completed in 2010 and was found to have “failed” based on a forensic analysis that was completed. The stream project restored approximately 600 linear feet of the downstream portion of Strawberry Run and the City calculated 40.80 lbs/yr of TP reductions using the linear foot method from this project. However, the published [Strawberry Run Downstream Forensic Investigation](#) (June 2022) found that the restoration no longer functions as designed. During FY2024, one BMP was found to be removed which was also initially reported under Phase 1. BMP ID 2008-0012 04 was a StormFilter™ Stormwater Treatment System that was no longer in operation. The Credits received for these three SMFs are shown in Table 20 and were be removed

from the BMP Warehouse; the Bay TMDL calculations; and reflected in this Phase 3 Action Plan. These BMPs were originally reported with Phase 1, removed from the BMP Calculation Tables, and reflected in the updated Phase 1 reductions in Table 22.

**Table 20 – Credits Received from BMPs Removed from Inventory**

Project	TN Reductions (lbs/yr)	TP Reductions (lbs/yr)	TSS Reductions (lbs/yr)
2010 Strawberry Run Restoration (2004-0038 01)	45	40.80	26,928
Vegetated Green Roof, Windsor Ave. (2007-0102 01)	0.06	0.01	5
StormFilter™ Stormwater Treatment System (2008-0012 04)	0.42	2.85	532

The City revisited Table 16 presented in this Action Plan, *Retrofits on City Property – Pollutant Reductions*, and cross referenced the BMPs with the City’s most up to date inventory. Table 21 provides an updated accounting of the Retrofits on City Property completed during Phase 1.

**Table 21 – Updated Retrofits on City Property – Pollutant Reductions**

BMP Type	TN Removed (lbs/yr)	TP Removed (lbs/yr)	TSS Removed (lbs/yr)
Manufactured Treatment Device - Filtering	0	0.24	112.61
Manufactured Treatment Device - Filtering	0	0.22	103.22
Rainwater Harvesting	0	0	0.00
Rainwater Harvesting	0	0	0.00
Rainwater Harvesting	0	0	0.00
Manufactured Treatment Device - Filtering	0	0.27	126.68
Manufactured Treatment Device - Filtering	0	0.27	126.68
Bioretention	13.67	1.64	769.49
<b>Total</b>	<b>13.67</b>	<b>2.64</b>	<b>1,238.69</b>

In October 2024, the City reviewed the full suite of BMPs reported to the Commonwealth of Virginia in compliance with the Chesapeake Bay TMDL. BMPs were reviewed for duplicates and the nutrient removal rates were calculated in accordance with current policy and regulations. This exercise produced more accurate pollution removals associated with Phase 1 which are an essential component of providing an accurate roadmap to 100% compliance by FY2028, as described in this Action Plan. Table 22 provides an updated accounting of the Phase 1 BMPs and the attached BMP Calculation Tables provide more detailed information for individual BMPs.

**Table 22 – Updated Phase 1 Permit Cycle Pollutant Reductions**

Project or BMPs	# of BMPs	TN Removed (lbs/yr)	TP Removed (lbs/yr)	TSS Removed (lbs/yr)
2006-2009 BMPs	61	1,305	158	150,445
2009-2014 BMPs	190	552	75	96,345
2014-2018 BMPs	84	270	48	39,927
Eisenhower Pond 19	1	167	39	23,644
Retrofits on City Properties	8	14	3	1,239
Four Mile Run Restoration	1	195	40	14,914
Windmill Hill Living Shoreline	1	131	8	9,951
<b>TOTAL PHASE 1</b>	<b>346</b>	<b>2,634</b>	<b>371</b>	<b>336,465</b>

## 11. Phase 2 Permit Cycle Progress

The following sections discuss the progress that the City has made in meeting the L2 Scoping Target Reductions. Each project or group of BMPs below initially presented in the City’s Phase 2 Action Plan is complete.

### 11.1 Lake Cook Retrofit

Construction of the Lake Cook Retrofit project was substantially complete in September 2018 or during the beginning of permit year 2018-2019. The project was awarded Stormwater Local Assistance Fund (SLAF) grant funding from DEQ.

**Table 23 – Lake Cook Retrofit – Pollution Reductions**

Total Acres Treated	Impervious Acres Treated	TN Removed (lbs/yr)	TP Removed (lbs/yr)	TSS Removed (lbs/yr)	Approx. City Cost <sup>1</sup>
390.3	127.5	1587.0	163.3	131,334	\$4.5M

<sup>1</sup>Value includes funds from a SLAF grant. Operation and maintenance is projected at \$103,000 annually beginning in FY 2019 with a three percent annual inflation factor included each year thereafter.

### 11.2 Ben Brenman Pond Retrofit

The Ben Brenman Pond retrofit was substantially complete in June 2020. This City-owned and maintained facility drains approximately 290 acres of urban land with an impervious percentage of 62%. The pond is in Ben Brenman Park and is in the Backlick Run watershed. Design plans improving the pond to meet the Level 2 Wet Pond criteria were finalized in November 2017. Improvements include increased pond and forebay volume, multiple cells, aquatic benches, wetland areas, aerators, and diversion of an additional 35 acres that was previously untreated. The project received a SLAF 50% matching grant in December 2014. The pollutant removals have been refined since they were reported for reference purposes in the Phase 1 Action Plan. The Pollution Calculations for Ben Brenman Pond is included in Appendix B.

**Table 24 – Ben Brenman Pond Retrofit – Pollutant Reductions<sup>1</sup>**

Total Acres Treated	Impervious Acres Treated	TN Removed (lbs/yr)	TP Removed (lbs/yr)	TSS Removed (lbs/yr)	Approx. Cost <sup>1</sup>
290.1	179.1	946.4	151.3	87,734	\$3.75M

<sup>1</sup>Opportunity costs for alternate uses of the land are considered inconsequential given the current use and therefore not factored into the costs.

### 11.3 Development SWM Facilities

In accordance with the Phase 1 and Phase 2 Action Plans, BMPs installed as part of redevelopment projects have been certified, documented, and uploaded to the DEQ BMP Warehouse. The BMP calculations for these BMPs are found in Appendix B.

**Table 25 – Development SWM Facilities – Pollution Reductions**

Total Acres Treated	Impervious Acres Treated	TN Removed (lbs/yr)	TP Removed (lbs/yr)	TSS Removed (lbs/yr)	Approx. City Cost <sup>1</sup>
54	40	124	44	20,499	\$0

### 11.4 Phase 2 Summary of Progress

Table 26 presents a summary of the progress at the end of the Phase 2 permit cycle. Based on progress made in the first cycle and strategies to be implanted in the second permit cycle, the City will far exceed the 40% pollutant reduction requirement and has made substantial progress in achieving 100% reduction goals.

**Table 26 – Phase 2 Permit Cycle Pollutant Reductions**

Project or BMPs	TN Removed (lbs/yr)	TP Removed (lbs/yr)	TSS Removed (lbs/yr)	Approximate City Cost
FY2019-FY2024 BMPs <sup>1</sup>	124	44	20,499	\$0
2009-2019 New Sources Offsets <sup>2</sup>	-13	-2.3	-1,911	\$0
Grandfathered Offsets <sup>2</sup>	30.6	8.7	3,676	\$0
Lake Cook Retrofit	1,587	163.3	131,334	\$4.5M
Ben Brenman Pond Retrofit	946.4	151.3	87,734	\$3.75M
<b>TOTAL PHASE 2</b>	<b>2,675</b>	<b>365</b>	<b>241,332</b>	<b>\$8.25M</b>

<sup>1</sup>Developer bears installation and long-term operation and maintenance costs for private facilities.  
<sup>2</sup>Negative values indicate net pollutant reductions.

**Table 27 – Phase 1 and 2 Progress**

Pollutant of Concern	City Phase 1 & 2 Actual Reductions (lbs./yr)	L2 Total Required Reductions (lbs./yr)	Percent of L2 Total Required Reductions Met
TN	5,309	7,597.03	70%
TP	736	1,004.40	73%
TSS	577,797	861,937	67%

## 12. Phase 3 Permit Cycle Anticipated Reductions and Final TMDL Compliance

In addition to redevelopment credits, the City completed the Lucky Run stream restoration project during FY 2024, and will use redevelopment and new BMP retrofits, along with credits obtained through the bi-lateral trading program with River Renew to achieve over 100% TMDL compliance by FY2028 as required through the 2023-2028 MS4 general permit. As noted above, DEQ removed the TSS requirement from the 2023-2028 MS4 general permit and that update is reflected in the tables below. Please note that the City has achieved over 100% of the previously required sediment reduction requirements. An overview of the reductions and credits are included in Table 26 and described herein.

The new 2023-2028 MS4 general permit removed total suspended solids/sediment from the Chesapeake Bay TMDL special conditions. Table 30 summarizes the completed expected reductions, which account for over 100% of the TN and TP goal.

**Table 28 – Phase 3 Anticipated Reductions**

Pollutant of Concern	Total Phase 1 & Phase 2 Reductions (lbs/yr)	Anticipated Phase 3 Reductions (lbs/yr)	Total Phase 1 through 3 Reductions (lbs/yr)	Total Required Reductions (lbs/yr)	Percent of Total
TN	5,309	3,160	8,469	7,597.03	111%
TP	736	905	1,641	1,004.40	163%

### 12.1 Stream Restoration

The City will complete the Lucky Run Stream Restoration project during Phase 3 (December 2023). The City received an FY2019 SLAF grant for the project, which involves restoring 950 linear feet of stream. The project is bounded by residential developments to the north and east, West Braddock Road to the west, and by Interstate 395 to the south. Lucky Run eventually outfalls to Four Mile Run, which ultimately outfalls to the Potomac River, and then the Chesapeake Bay. Approximately, 224 acres of highly urban land drain to Lucky Run. The restoration has reestablished a stable pattern and profile in the stream as well as addressing areas of severe erosion near a sanitary line and nature trail. Construction was completed during the Phase 3 permit cycle. The pollutant removals for the project are based on the 2014 Stream Restoration Expert Panel Report using protocols 1 and 2.

**Table 29 – Phase 3 Progress: Lucky Run**

Project	TN Removed (lbs/yr)	TP Removed (lbs/yr)	Approx. Cost to City <sup>1</sup>
Lucky Run Stream Restoration	658	257	\$1.8M

<sup>1</sup>The cost of the Lucky Run project has been updated from the Phase 2 Action Plan and is based on more current information. This cost includes SLAF funding.

## 12.2 Bi-Lateral Trading

During Phase 3, the City will engage in bi-lateral trading with Alexandria Renew Enterprises (AlexRenew) for the pollution reduction credits generated from the River Renew project funded by the City’s rate payers. Section 15 of the Outfall Transfer Agreement states that AlexRenew will apply the Bay TMDL Combined Sewer Overflow (CSO) WLAs that are in effect for nitrogen, phosphorus, and sediment to any CSO overflows and to combined sewer flows that are measured, captured, and treated through AlexRenew’s Water Resource Recovery Facility (WRRF) once the RiverRenew project is complete. If after this analysis, allocation of nitrogen, phosphorus, and sediment remains unapplied, such credits will be calculated using AlexRenew’s actual previous year annual reported nitrogen, phosphorus and sediment performance and traded to the City for its use. As such, the City may use these credits towards meeting the Bay TMDL pollutant reductions in the MS4 general permit. The funding for the RiverRenew project is being born by the City’s ratepayers. These are the same ratepayers that pay the City’s Stormwater Utility Fee. The anticipated annual trading credits are provided in Table 28.

**Table 30 – Phase 3 Progress: Anticipated Bi-Lateral Trading Credits**

Project	TN Removed (lbs/yr)	TP Removed (lbs/yr)	Approx. Cost to City <sup>1</sup>
Bi-Lateral Trading <sup>2</sup>	1,500	500	\$0

<sup>1</sup>The cost of the RiverRenew Project is \$615 million that is funded by rate payers in the City as described above.

<sup>2</sup>Numbers are estimated and dependent on the performance of the tunnel system.

## 12.3 Redevelopment SWM Credits

During Phase 3, two large redevelopment projects are anticipated to be completed as well as routine redevelopment. Stormwater quality BMPs implemented to meet the VSMP regulations, as adopted into the City’s Environmental Management Ordinance effective July 1, 2014, and the City’s more stringent requirements to treat the first one-half inch of runoff – the first flush – from all impervious surfaces. Note that development also must comply with the City’s memo to industry that requires at least 65% of the TP removal requirement be accomplished through non-proprietary surface BMPs, i.e. Green Infrastructure.

- **Landmark.** The Landmark Redevelopment Project was approved on July 6, 2021 by City Council. This project will result in up to approximately four million square feet of new development. The project will be anchored by the relocation and expansion of Inova’s new state-of-the-art Alexandria Hospital bringing more than 2,000 health care workers to the medical campus. This transformational project—led by developer Foulger-Pratt—was named by the Washington Business Journal as the 2020 Real Estate Deal of the Year.

- **North Potomac Yard.** The 2010 North Potomac Yard Small Area Plan established the vision and guiding principles for the redevelopment of the approximately 70-acre site as a sustainable, mixed-use, walkable community oriented around the construction of the Potomac Yard Metrorail station and established the framework to determine funding sources for the Metrorail Station and potential phasing options for redevelopment of the Plan area.

**Table 31 – Phase 3 Progress: Anticipated Redevelopment Credits**

Project	TN Removed (lbs/yr)	TP Removed (lbs/yr)	Approx. Cost to City <sup>1</sup>
Anticipated Annual Redevelopment through FY2028	1,036	320	\$0

<sup>1</sup>Developer bears installation and long-term operation and maintenance costs for private facilities.

#### 12.4 Summary of Projected Credits for Phase 3 (2023 – 2028)

Table 30 provides a summary of anticipated pollution credits and estimated costs anticipated during Phase 3.

**Table 32 – Phase 3 Permit Cycle Anticipated Pollutant Reductions**

Project or BMPs	TN Removed (lbs/yr)	TP Removed (lbs/yr)	Approximate City Cost
Lucky Run Stream Restoration	658	257	\$1.8M
Bi-Lateral Trading	1,500	500	\$0
Anticipated Annual Redevelopment through FY2028	1,036	320	\$0
<b>TOTAL PHASE 3</b>	3,194	1,077	\$1.8M

### 13. Costs of Implementation

The cost for credits for BMPs implemented during development and redevelopment are borne by the developer. But much of the cost to implement the strategies outlined herein will largely fall to the City. While small amounts of grant funding may be available from state and federal agencies, Virginia has acknowledged that the planning, implementation, operation, and maintenance of BMPs “will be costly and likely borne by local government.” (Virginia Senate Finance Committee, November 2011)

Order of magnitude costs were developed in previous planning-level exercises to estimate the total cost of 100% compliance with the target loads to determine the impact on the CIP budget over the short and long terms. Cost assumptions were based on best engineering practices, local assumptions, discussions with regional partners, and a draft report researching the costs of various BMPs (King and Hagen, 2011) prepared for the Maryland Department of Environment. The analyses employed during the previous planning level exercise identified specific possible retrofit strategies that may be implemented based on assumptions about the type of retrofit most likely to be implemented for each specific strategy, and limitations associated with each strategy. A range of technologies were assumed applicable and an average removal efficiency and unit cost per acre treated were derived for each strategy. For instance, most

Retrofits of City Rights-of-Way would likely involve manufactured BMPs (such as tree box filters) or similar structures with an average removal efficiency of approximately 45% at a unit cost of approximately \$112,000 per acre treated. This and other assumptions for other types of strategies, along with the assumed long-term operations and maintenance costs, may or may not hold true. Regarding those strategies needed to fill the pollutant reduction gap (that is, those generic strategies needed to reach reduction targets after implementation of the specific strategies addressed in this report), no assumptions were made regarding whether these would be sited on public or private land. As a result, cost estimates do not include the cost of purchasing land or easements – which could be considerable.

To meet increased costs, the City adopted a Stormwater Utility Fee on May 4, 2017, with the Fiscal Year 2018 budget to provide a dedicated source to fund the City’s Stormwater Management Program, to be billed starting May 2018. The fee funds stormwater management, to include federal and state mandates to clean up the Chesapeake Bay, more equitably than through real estate taxes by shifting stormwater management costs to residential and nonresidential property owners with greater impact on stormwater runoff. The fee was effective January 1, 2018, and the first bill was mailed on in May 2018. The fee is billed twice a year with the City’s real estate billing.

#### **14. Public Comment**

The draft Phase 3 Action Plan was shared with the public for review from August 28 – September 16, 2024 (20-calendar days). The City shared an eNews announcing the public comment period August 22, 2024. The public comment information was shared in the Alexandria Gazette Packet on August 29, 2024. Comments were received via an online form and via email. City staff shared the draft Phase 3 Action Plan with the City’s Environmental Policy Commission in an email on August 29, 2024. City staff also presented on the draft Phase 3 Action Plan to the EPC on September 16, 2024. During the meeting, Commission members discussed possible future goals for the Chesapeake Bay TMDL and its anticipated impact on the City and they inquired if the City does water quality testing for the TMDL parameters and/or how that is calculated. The draft Phase 3 Action Plan comment and response table is included as Table 31.

**Table 33. Phase 3 Action Plan Public Comment and Response Table**

Commentor	Comment	Response and Action Taken	Action Taken
Russell Bailey, Roy Byrd, Jeremy Flachs, Carter Flemming, Bill Gillespie, Kathie Hoekstra, Andrew Macdonald, Kurt Moser	<p>Comments on Alexandria’s Draft Phase 3 Chesapeake Bay TMDL Action Plan for 100% Compliance We were all community member participants in the City staff-community consensus building groups on the Taylor Run proposed reengineering project. We welcome the City’s August 2024 Draft Phase 3 Chesapeake Bay TMDL Action Plan for 100% Compliance (“AP”). That plan shows that Alexandria is on track to well exceed the nutrient reduction requirements in its 2023-2028 MS4 general permit. The AP sets out specific measures that have been, or will be, implemented to meet the 100% compliance targets. Because total suspended sediment reductions have been dropped as a requirement, the plan focuses on reduction mechanisms for nitrogen and phosphorus.</p> <p>The AP describes the reductions that were reached through its Phase 1 and Phase 2 efforts as well as those that will be, or have been, reached as a result of its Phase 3 efforts. It is those later efforts that we address here. While Alexandria identifies a range of actions that can be taken to reduce TN and TP, the City details three major reduction measures: 1) the receipt of nutrient reduction credits due to bi-lateral trading with Alexandria Renew Enterprises, which will soon be operating a new waste water treatment system, 2) the reengineering of Lucky Run, and 3) Best Management Practices (BMP’s) that will be put in place as part of redevelopment projects in the City that will take place by the end of 2028. AP, pages 32-34. The plan does not include any stream reengineering beyond that done at Lucky Run and specifically states that previously proposed projects at Taylor Run and Strawberry Run have been removed as nutrient reductions options. AP, page 20. While several of the undersigned opposed the Lucky Run project, it is done. We appreciate the development of a compliance plan that achieves sufficient measurable nutrient reductions without undertaking additional stream projects. We look forward to working with the City on infrastructure fixes that may need to be undertaken at Taylor Run. Russell Bailey, Roy Byrd, Jeremy Flachs, Carter Flemming, Bill Gillespie, Kathie Hoekstra, Andrew Macdonald, Kurt Moser</p>	<p>The City confirms that the Phase 3 Action Plan focuses on the three major reduction measures described in the comments.</p>	<p>No Action Taken</p>
Philip Mobilia, EPC Commissioner	<p>1. p. E-4, 4th paragraph (and in numerous other sections further down the document): Reference is made to “Bi-lateral Trading project”. A brief description of what is meant by this would be helpful.</p>	<p>Bi-lateral trading is further detailed in Section 9, Means and Methods to Meet Target Reductions, section 9.12.</p>	<p>No Action Taken</p>

Commentor	Comment	Response and Action Taken	Action Taken
Philip Mobilia, EPC Commissioner	2. Many of the tables show values for TN and TP removal rates. I saw no description of how the nitrogen and phosphorous were/will be removed. A brief discussion of the treatment methods used would be helpful.	Best management practices (BMPs), also known as Stormwater Management Facilities (SMFs), remove pollution by allowing rainwater and snowmelt to soak into the system which helps to filter out pollutants, such as nutrients and sediment, and allow 'treated' water to return to waterways. Each type of BMP (i.e., wet pond, green roof, infiltration practices, etc.) uses different processes engineered to treat stormwater and are defined in the Virginia BMP Clearinghouse. Each BMP type has a specific removal efficiency assigned to it based on several factors and the associated removals are calculated using the Virginia Runoff Reduction Method which is based on the acres treated, type of area draining to the BMP, and type of practice.	A text box was added to the Executive Summary on Page E-3.
	3. Figure 2 – Graphic Representation of Existing Nitrogen Loads, p. 7: There is no key to assist with interpreting what the graph represents. What does yellow represent? Red? Orange?	The gradient of the colors presented on the map represent the estimated intensity of nitrogen loads across the City with the darker, red color showing areas of more intense loading and lighter yellow color being less intense.	Additional information about Figure 2 was added to page 6, which highlights the difference between the different colors.
	4. p. 11, 1st paragraph (and in several other locations) reference is made to requirements for projects exceeding 1 acre. What about projects <1 acre? Exempt?	The regulations specific to grandfathered projects within Phase 1 outlined the requirement to identify and account for projects disturbing one acre or greater.	No Action Taken
	5. Several locations: "reduction credits" are discussed. What are these, how are they determined, how are they used?	Reduction credits are generated when a water quality BMP is installed under any of the strategies listed in the Action Plan. These BMPs reduce the amount of pollution in stormwater runoff. The amount of the reduced pollution or "reduction credits" is applied to the target reductions that are mandated by the MS4 general permit. So any BMP installed will provide reduction credits.	No Action Taken
	6. General: Is any actual water sampling conducted to verify the projected reductions or are we relying solely on calculations based on estimated values?	No, water sampling is not conducted. The City relies on the state guidance for calculating pollution reductions.	No Action Taken

Commentor	Comment	Response and Action Taken	Action Taken
Philip Mobilia, EPC Commissioner	7. p. 24, Section 10: The opening paragraph of this section states, in part: “Each project or group of BMPs below was initially presented in the City’s Phase 1 Action Plan and is complete or is expected to be substantially completed by the end of the 2017-2018 permit year.” (emphasis added). This sounds like a “cut and paste” from a prior report. This should be updated to reflect the actual status of each item.	Please note that the Lake Cook project initially shown in Phase 1 was considered substantially complete in Phase 2. This update is reflected in the Final Phase 3 Action Plan.	Text on page 24 has been revised to indicate that the projects are complete and Lake Cook credits are taken in Phase 2. Text on page 29 also has been slightly revised as well for proper wording (Phase 2).
	8. Table titled: July 1, 2009 to June 30, 2014 BMP Calculation Table. There is a column heading: “TN BMP Efficiency*”, but there is no description of what the “*” refers to (none that I could find).	The Asterisk refers to the BMP removal efficiency utilized for the individual BMP which is shown as "Efficiency Method" in the last column of the table. However, each of the tables presented within Appendix B include the Efficiency Method so the Asterisk is not needed in this table.	The table has been updated to remove the Asterisk.

## **15. Summary of Phase 3 Action Plan Updates Prior to Submission to DEQ**

Prior to submission of the Phase 3 Action Plan to DEQ, staff further refined and checked all of the tables, calculations, and information presented in the draft Phase 3 Action Plan and determined that several adjustments should be made in order to present the most accurate and updated information in the final document. These updates are summarized as follows:

- Updates to Table E2 and corresponding tables E3 and E5, as well as Table 24, 25, and 26 were updated based on revised calculations that accurately captured the values shown.
- The percentage towards the goals were updated in the Introduction section based on the revised calculations reflected in Tables 24 – 26.
- Removed the erroneous footnote on Table 29.
- Updated the BMP Calculation Tables in Appendix B for all fiscal years and removed duplicates and BMPs that were removed from the calculations and warehouse. Added in the 2006 – 2009 BMP Calculations.
- Moved Credits Received from BMPs Removed from Inventory during FY2023 and FY2024 into Phase 1 calculations and updated Phase 1 totals accordingly.
- Updated the City retrofit BMPs included in Phase 1 to reflect actual BMPs installed.
- Added a new section to discuss updates to Phase 1 and included a new table to reflect updates to Phase 1 calculations.
- Updated Table 26 to align with the values presented in Table 30.
- Adjusted the totals in Phase 2 based on the updated BMP Calculation Tables.
- Added Appendix E to provide information on the Phase 3 public notification and outreach activities.

## **Appendix A**

### **Future Grandfathered Projects**

<b>Future Grandfathered Projects</b>		
<b>Project Name</b>	<b>Address</b>	<b>Approx. Project Site Area (ac)</b>
Carlyle Plaza Two (Amendments)	DSP2013-00025	6.92
Hoffman Properties Blocks 11 and 12	DSP2016-00012 (DSUP2013-00008)	4.27
Carlyle Plaza One	DSP2006-00003	1.39
Mark Center Plaza 1A Building 5	DSP2007-00027	7.24
	<b>Total</b>	<b>19.82</b>

Potomac Yard Landbay G - Block D (Institute for Defense Analyses at Potomac Yard) (DSP2012-00008) was removed from the list of future grandfathered projects during the Phase 3 Action Plan update. The calculations for this BMP are included in the Phase 2 calculations and reflected herein. Eisenhower Block 20 (DSP2015-00008 (DSUP2007-00017)) also was removed and will be go back through the planning process.

**RE: City of Alexandria- Lake Cook Retrofit Design  
Draft Technical Memorandum- Chesapeake Bay TMDL Water Quality Credits  
URS No. 15304189**

## **Executive Summary**

The City of Alexandria has identified retrofitting existing ponds as an initial step in meeting the Chesapeake Bay Total Maximum Daily Load TMDL reductions specified in its Municipal Separate Storm Sewer System (MS4) permit. A study commissioned by the City in March 2013 identified Lake Cook as a candidate for water quality retrofits. In December 2013, the City received a Stormwater Local Assistance Fund (SLAF) Grant from the Virginia Department of Environmental Quality (VA DEQ) to help fund the conversion of Lake Cook from a recreational fishing lake to a stormwater best management practice (BMP). The purpose of this technical memorandum is to describe the proposed BMPs for Lake Cook and summarize the water quality benefits in terms of pounds of nitrogen, phosphorus, and total suspended solids that will be removed annually by Lake Cook after retrofits are made.

With the exception of treatment volume storage, proposed retrofits to Lake Cook will meet the criteria for a Level 1 Design Wet Pond, as listed in the *Virginia DEQ Stormwater Design Specification No. 14 – Wet Pond, Version 1.9*, dated March 1, 2011. The design specification can be found on the Virginia Stormwater Management BMP Clearinghouse website (<http://www.vwrrc.vt.edu/swc/>). As a retrofitted wet pond with an upflow filter, Lake Cook will remove approximately 1,610 pounds of nitrogen, 167 pounds of phosphorus, and 134,140 pounds of total suspended solids annually.

While Lake Cook is considered to be a recreational lake in its existing state, it appears on the City's BMP inventory with a credit for the treatment of 15 acres draining to it from the adjacent Animal Welfare League property and a portion of Cameron Run Regional Park. According to DEQ's Draft Revised Guidance Memo No. 14-2012, and the SLAF Program Guidelines, if an existing BMP is retrofitted, nutrient removal credit will be allowed for the differences between the reported annual pollutant removals of the BMP before retrofits were made (existing condition) and the calculated removals after

retrofitting. The existing pollutant removal rates for Lake Cook were calculated using the methods outlined in VA DEQ's Draft Revised Guidance Memo No. 14-2012 for the 15 acres draining from the Animal Welfare League property and Cameron Run Regional Park. The annual removal rates for Lake Cook in its existing condition are 23, 3, and 2,806 pounds of nitrogen, phosphorus, and total solids, respectively. Since the 15 acres the City is taking credit for treating represents less than four percent of the total watershed actually draining to Lake Cook, the City will get credit for the annual removal of approximately 1,587 pounds of nitrogen, 163 pounds of phosphorus, and 131,334 pounds of total solids after completing retrofit improvements. The methods used to calculate the existing and post-retrofit annual pollutant removal rates are discussed below as well as design criteria that will be met as part of the Lake Cook retrofit.

Other design elements such as floating wetlands were included as additional features in the feasibility study, which may be incorporated into the overall project. However, this memorandum addresses only those water quality retrofits approved for nutrient removal credit by the Virginia Stormwater Management BMP Clearinghouse.

### **Background**

Located in the Cameron Run watershed, Lake Cook was originally constructed in the 1970s, and drains approximately 390 acres of urban land in Alexandria. Approximately 127 acres, or 33 percent, of the area draining to Lake Cook, is impervious. The lake has a surface area of approximately 3 acres, and receives stormwater inflows primarily from Strawberry Run. As part of Cameron Run Regional Park, the lake's primary use is recreational and it is regularly stocked by the Virginia Department of Game and Inland Fisheries.

### **Description of Proposed Retrofits**

Improvements to Lake Cook include retrofitting the lake to meet the criteria for a Level 1 Wet Pond, with the exception of treatment volume storage, as outlined by [VA DEQ's Stormwater Design Specification No. 14](#), and the installation of an upflow filter. Some design elements, such as multiple storage cells meet the criteria for a Level 2 Wet Pond design. The following is a description of the required retrofits:

***Treatment Volume*** – A treatment volume of approximately 14.8 acre-feet is required for a Level 1 design, based on the Virginia Runoff Reduction Methodology spreadsheets. This treatment volume may consist of storage entirely below the normal pool elevation, or a combination of extended detention storage above the normal pool elevation plus the storage volume below the normal pool elevation. Because Lake Cook is located within a

Federal Emergency Management Agency (FEMA) regulated floodplain, URS recommends that extended detention storage not be used to achieve the required treatment volume, and that treatment volume storage be contained below the normal pool elevation. Due to site constraints and conditions within the existing pond, the City believes that providing a storage volume of 14.8 acre-feet below the normal pool elevation is not feasible. The City would like to propose creating a storage volume that correlates to a runoff treatment depth of 1 inch over the impervious area within the Lake Cook watershed. With approximately 127.5 impervious acres in the watershed, that volume is approximately 10.6 acre-feet.

***Single Pond Cell*** – Currently, storage in the lake is provided within a single area. The proposed design calls for a two-cell design. Multiple pond cells meet the criteria for a Level 2 Wet Pond design.

***Sediment Forebay*** – A significant amount of accumulated sediment can be seen in aerial photographs at the mouth of Strawberry Run. Two sediment forebays will be incorporated into the proposed design. Each pond cell will have a separate sediment forebay.

***Aquatic Benches*** – Aquatic benches will be provided according to the Level 1 Design criteria. The location of the benches is yet to be determined.

***Upflow Filter*** – Additional water quality improvements will be provided by the construction of an upflow filter. While not a requirement for a Level 1 Design, it will provide additional water quality benefits within the lake.

The proposed upflow filter design does not meet the Virginia Stormwater Management BMP Clearinghouse criteria and has not been approved by VA DEQ as a water quality BMP; therefore, the City will not get any additional nutrient removal credit.

The use of an upflow filter meeting the Virginia Stormwater Management BMP Clearinghouse criteria would provide an additional 40-percent reduction in phosphorus. When applied to the remaining phosphorus load untreated by the wet pond itself, an additional 65 pounds of phosphorus could be removed annually.

**Nutrient Removal Credit for Design Retrofits.**

In order to calculate the pounds of nutrients removed by Lake Cook after retrofits are completed, the pollutant loads of nitrogen, phosphorus, and total suspended solids generated by the Lake Cook watershed were calculated first. The pollutant loading rates for the three pollutants were taken from Table 2b: *Calculation Sheet for Estimating Existing Source Loads for the Potomac River Basin*, found in Alexandria's 2013-2018 MS4 permit for Regulated Urban Impervious and Regulated Urban Pervious land uses. The pollutant loading rates for forested land were taken from Table III.1 *Forested loading rates by basin*: from DEQ's Draft Revised Guidance Memo 14-2012. Table 1 shows the land use acres served by Lake Cook, the pollutant loads for each nutrient by land use, and the total pollutant loads generated by the Lake Cook watershed.

**Table 1. Lake Cook Watershed Pollutant Loads**

Land Use	Pollutant	Total Acres Served	Loading Rate (lbs/ac/yr)	Pollutant Load (lbs/yr)	Total Load (lbs/yr)
Regulated Urban Impervious	Nitrogen	127.54	16.86	2,150.32	<b>4,599.20</b>
Regulated Urban Pervious	Nitrogen	221.51	10.07	2,230.61	
Forest	Nitrogen	41.26	5.29	218.27	
Regulated Urban Impervious	Phosphorus	127.54	1.62	206.61	<b>302.80</b>
Regulated Urban Pervious	Phosphorus	221.51	0.41	90.82	
Forest	Phosphorus	41.26	0.13	5.36	
Regulated Urban Impervious	Total Suspended Solids	127.54	1,171.32	149,390.15	<b>191,628.70</b>
Regulated Urban Pervious	Total Suspended Solids	221.51	175.80	38,941.46	
Forest	Total Suspended Solids	41.26	79.91	3,297.09	

Because the proposed wet pond design does not strictly meet all of the Virginia Stormwater BMP Clearinghouse standards for a Level 1 Wet Pond, the Clearinghouse removal efficiencies, strictly speaking, cannot be used to calculate the annual pollutant removals for the pond. Virginia DEQ’s Draft Revised Guidance Memo No. 14-2012 (dated March 19, 2015) states that the Chesapeake Bay Program Retrofit Curves should be used to determine pollutant removal efficiencies when a BMP cannot meet the Virginia Stormwater BMP Clearinghouse criteria. Based on a treatment depth of 1 inch over the impervious acres in the Lake Cook watershed, the Chesapeake Bay Program Retrofit Curves give removal efficiencies of 35% for nitrogen, 55% for phosphorus and 70% for sediment for Stormwater Treatment Practices (ST) such as wet ponds. Table 2 shows the annual pollutant removal rates based on the Lake Cook watershed pollutant loads and nutrient removal efficiencies from the Bay Program Retrofit Curves (without the benefit of an approved upflow filter). The City would like to use the removal efficiencies from Bay Program Retrofit Curves to calculate the nutrient reduction credit

for the proposed retrofit design for three reasons. First, recent correspondence with DEQ confirmed that the Bay Program Retrofit curves must be used to calculate nutrient reduction efficiencies for BMPs that do not meet the BMP Clearinghouse criteria, and given a lack of other methods to compute efficiencies, permittees may use those efficiencies calculated by the curves. Secondly, the proposed retrofit design meets all other criteria for a Level 1 Wet Pond design, and even meets the criteria for a Level 2 Wet Pond design by providing multiple cells, each having its own sediment forebay.

Thirdly, the proposed retrofit design still provides storage for a runoff treatment depth of 1 inch over the impervious acreage within the watershed.

**Table 2. Annual Nutrient Removal by Lake Cook After Retrofitting**

<b>Pollutant</b>	<b>Annual Pollutant Load Input from Watershed (lbs/yr)</b>	<b>Removal Efficiency (%)</b>	<b>Annual Pollutant Removal (lbs/yr)</b>
Nitrogen	4,599.20	35	<b>1,609.72</b>
Phosphorus	302.80	55	<b>166.54</b>
Total Suspended Solids	191,628.70	70	<b>134,140.09</b>

The conversion of Lake Cook to a Level 1 Design Wet Pond through retrofitting will result in the removal of approximately 1,610 pounds of nitrogen, 167 pounds of phosphorus, and 134,140 pounds of total suspended solids.

#### **Existing BMP Nutrient Removal**

Per DEQ’s Draft Revised Guidance Memo No. 14-2012 and the SLAF Program Guidelines, pollutant removal rates for an existing BMP must be calculated and subtracted from the removal rates for the BMP after upgrades and retrofitting are complete. In the case of Lake Cook, the nutrient removal provided by the lake in its existing state was calculated for the 15-acre Animal Welfare League that drains to the lake, which is the reported acreage serviced by Lake Cook in the City’s BMP inventory. Since the lake does not meet the Virginia Stormwater Management BMP Clearinghouse standards for a wet pond in its existing state, the Chesapeake Bay Program BMP removal efficiencies for a wet pond (nitrogen – 20 percent, phosphorus – 45 percent, and total suspended solids – 60 percent) were used as a starting point for the calculations, per Example V.D.2 in the Draft Revised Guidance Memo 14-2012.

Due to the age of the lake and the lack of original design criteria, downward modifications were made to the Chesapeake Bay Program’s removal efficiencies. Specifically, 10-percent reductions in efficiency were taken for age since the lake was constructed in the 1970s. The age of the lake combined with the lack of a sediment forebay and the lack of aquatic benches resulted in a total downward reduction of 30 percent. The resulting pollutant removal efficiencies used for calculating the existing pollutant removal rates are: 14 percent, 31.5 percent, and 42 percent for nitrogen, phosphorus, and sediment, respectively.

Tables 3 and 4 show the existing pollutant loads and the pollutant removal rates credited to Lake Cook for treatment of the 15-acre Animal Welfare League site. The pollutant

loads were based on 4.44 acres of urban impervious, 6.64 acres of urban pervious, and 3.92 acres of forested land.

**Table 3. Existing Pollutant Loads from the Animal Welfare League/Cameron Run Regional Park**

Land Use	Pollutant	Total Acres Served	Loading Rate (lbs/ac/yr)	Pollutant Load (lbs/yr)	Total Load (lbs/yr)
Regulated Urban Impervious	Nitrogen	4.44	16.86	74.86	<b>162.46</b>
Regulated Urban Pervious	Nitrogen	6.64	10.07	66.86	
Forest	Nitrogen	3.92	5.29	20.74	
Regulated Urban Impervious	Phosphorus	4.44	1.62	7.19	<b>10.42</b>
Regulated Urban Pervious	Phosphorus	6.64	0.41	2.72	
Forest	Phosphorus	3.92	0.13	0.51	
Regulated Urban Impervious	Total Suspended Solids	4.44	1,171.32	5,200.66	<b>6,681.22</b>
Regulated Urban Pervious	Total Suspended Solids	6.64	175.80	1,167.31	
Forest	Total Suspended Solids	3.92	79.91	313.25	

**Table 4. Pollutant Removals for Existing Lake Cook**

Pollutant	Annual Pollutant Load Input from Watershed (lbs/yr)	Removal Efficiency (%)	Annual Pollutant Removal (lbs/yr)
Nitrogen	162.46	14	<b>22.74</b>
Phosphorus	10.42	31.5	<b>3.28</b>
Total Suspended Solids	6,681.22	42	<b>2,806.11</b>

Based on the differences between the annual pollutant removal rates calculated for Lake Cook as an existing BMP treating 15 acres of the Lake Cook watershed (as reported by

the City) and the pollutant removal rates that will be provided by the new water quality retrofits, the City of Alexandria should be allowed to take credit for an incremental increase of 1,587 pounds of nitrogen, 163 pounds of phosphorus, and 131,334 pounds of total suspended solids towards meeting its Chesapeake TMDL reductions. Table 5 summarizes the existing and future pollutant removals, and incremental increase in nutrient removal credit.

**Table 5. Existing, Future, and Incremental Pollutant Load Reductions**

<b>Pollutant</b>	<b>Existing Annual Pollutant Load Reductions (lbs/yr)</b>	<b>Annual Pollutant Removal Rates After Retrofitting (lbs/yr)</b>	<b>Incremental Difference Between Annual Pollutant Removal Rates (lbs/yr)</b>
Nitrogen	22.74	1,609.72	<b>1,586.97</b>
Phosphorus	3.28	166.54	<b>163.25</b>
Total Suspended Solids	2,806.11	134,140.09	<b>131,334</b>

*Four Mile Run Stream Restoration Technical Memorandum*

# Technical Memorandum

To: City of Alexandria

From: Brian Finerfrock, Eliana Rios  
Rummel, Klepper & Kahl, LLP

Date: September 11, 2014

Subject: Four Mile Run Stream Restoration – Tidal Wetland Pollutant Removal – Protocol 3

---

The following memorandum documents the use of the “Recommendations of the Expert Panel to Define Removal Rates for Individual Stream Restoration Projects” prepared by Tom Schueler (Chesapeake Stormwater Network) and Bill Stack (Center for Watershed Protection) to determine the pollutant removal amount for the proposed tidal wetland restoration site associated with the Four Mile Run Tidal Restoration project.

## Introduction

The tidal wetland restoration site will be assessed using Protocol 3-Credit for Floodplain Reconnection Volume. The intent of this protocol is to provide mass sediment and nutrient reduction credit for projects which provide a reconnection of stream channels to their flood plains over a wide range of storm events. This criteria matches the intended function of the proposed wetland by providing a floodplain connection to the main channel (Four Mile Run). It should be noted that the Virginia Runoff Reduction Methodology Standard Constructed Wetland, is not an appropriate assessment of the pollutant removal conditions of the proposed wetland because the Constructed Wetland design and function relies on the long term storage of water over a wetland vegetation which is a function of a stand riser. Whereas the pollutant removal capability of the proposed wetland will be a function of the sediment deposition, plant pollutant uptake, denitrification, and other biological and physical processes.

### METHOD AND QUALIFYING CONDITIONS

The applicable mass sediment and nutrient reduction credit is limited to the volume of water, up to 1 foot, captured by the wetland (floodplain reconnection).

A few criteria are required to be evaluated to determine applicability:

1. Is the project primarily designed to protect public infrastructure by bank armoring or riprap?- NO
2. Is the stream reach greater than 100 feet in length and still actively enlarging or grading in response to upstream development or adjustment to previous disturbances in the watershed? Yes
3. Does the project utilize a comprehensive approach to the stream/wetland restoration design? Yes
4. Will the project comply with state and federal permitting?- Yes
5. Are activities being proposed in a high function portion of the urban stream corridor?- No

### Site Conditions

The proposed wetland is a tidally influenced wetland, located in the Four Mile Run Park, in the City of Alexandria. The proposed wetland is planned to be 2 acres in size, with a design intended to minimize phragmite colonization.

**Site Computations:**

**Step 1: Estimate Floodplain Connection Volume**

The proposed wetland is tidally influenced, therefore there is a baseflow condition. For pollutant removal efficiencies we determined which portion of the 1-inch storm event (Water Quality Volume event) will be available to the wetland for potential treatment. We determined the full range of 1-inch watershed inches if available to the wetland for potential treatment.

It should be noted that determination of the use of 1-inch storm events for purposes of treatment volume for the runoff reduction methodology was based an analysis of rainfall data at Reagan National Airport, which is very close to the project site and applicable for use in determining rainfall-runoff

characteristics of Four Mile Run.

**Step 2: Estimate Phosphorus, Nitrogen and Total Suspended Solids (TSS) Removal Rate Available to Floodplain Reconnection**

Under the guidance of the protocols, the maximum removal efficiency for wetland/floodplain reconnection is 30%. Based on the available volume in the proposed wetland with a maximum depth of 1.0 feet, we conclude that for treatment purposes, storm events up to the 0.5 inch storm event with a floodplain storage volume (watershed inches) of 1-inch, will allow for our wetland to achieve a

Tidal Wetland Pollutant Removal- Protocol 3

phosphorus (P), nitrogen (N) and total suspended solids (TSS) removal efficiency of 10%, 6.8% and 6.8% respectively.

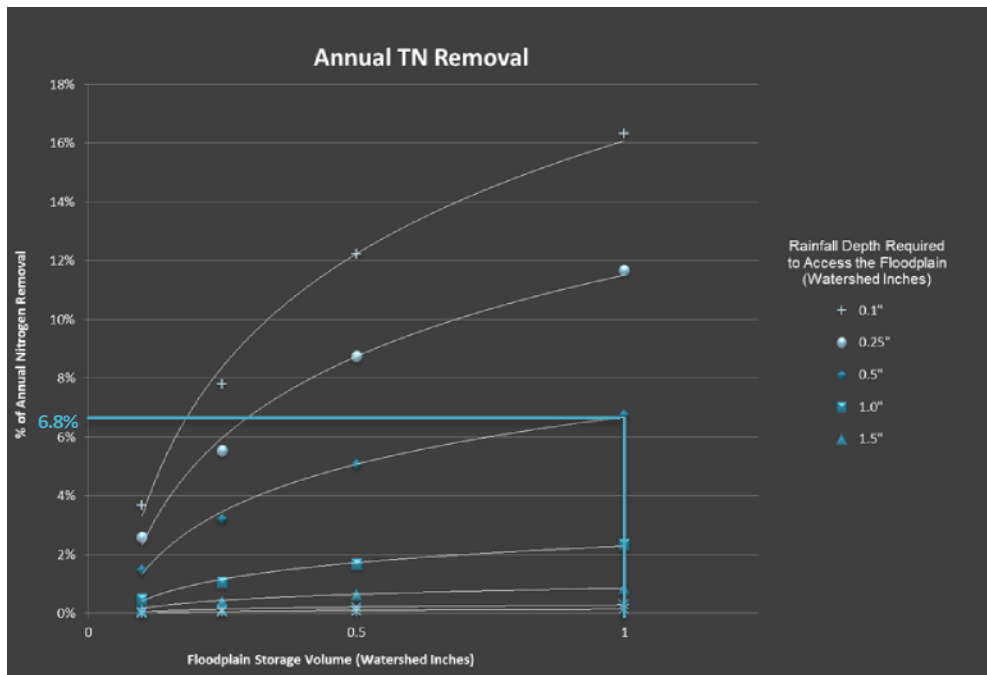

Figure 1-Annual Total Phosphorus (TP) removal as a function of floodplain storage volume for several rainfall thresholds that allow runoff to access the floodplain.

## Tidal Wetland Pollutant Removal- Protocol 3

Figure 3-Annual Total Suspended Solids (TSS) removal as a function of floodplain storage volume for several rainfall thresholds that allow runoff to access the floodplain

### Step 3: Compute Annual Phosphorus, Nitrogen and Total Suspended Solids Load

Our analysis performed a watershed analysis of the watershed to determine the potential phosphorus loading for Four Mile Run. Four Mile Run watershed drainage area to the wetland is approximately 10,560 acres, comprised of a highly urbanized watershed, with 10% B soils and 90% D soils in average.

Our analysis utilized two methodologies of determining the potential phosphorus and nitrogen loads: Virginia Runoff Reduction

Methodologies and Chesapeake Bay Watershed Model projections (CBWM). The later methodology was also used for computing TSS loads. Using these two methods, the results for phosphorus and nitrogen loads were comparable:

- **Runoff Reduction Methodology:** 21,074 lbs/yr for Phosphorus and 150,759 lbs/yr for Nitrogen.
- **Chesapeake Bay Watershed Model (CBWM):** 21,648 lbs/yr (using 2.21 lbs/acre/yr of impervious cover & 0.6 lbs/acre/yr for pervious cover) for Phosphorus, 142,879 lbs/yr (using 13.9 lbs/acre/yr of impervious cover & 10.2 lbs/acre/yr for pervious cover) for Nitrogen and

## Tidal Wetland Pollutant Removal- Protocol 3

*11,355,168 lb/yr (using 1,175 lbs/acre/yr of impervious cover & 178 lbs/acre/yr for pervious cover)for Total Suspended Solids.*

Due to the wide acceptance of Runoff Reduction, we chose to utilize the Runoff Reduction Methodology Loadings: 21,074 lbs/yr for Phosphorus and 150,759 lbs/yr for Nitrogen. As only one methodology was evaluated for Total Suspended Solid the Chesapeake Bay model loadings will be utilized: *11,355,168 lb/yr.*

**Step 4: Compute Annual Pollutant Reduction Credit**

From step 2, we determined the wetland will have a phosphorus removal rate of approximately 10%. With an estimated pollutant loading of 21,074 lbs/year the total potential phosphorus removal would be 2,107.4 lbs/year. But, due to the wetland area being less than 1% of the watershed area, we cannot take full credit for the load reduction, but rather a portion of the removal (0.019%), this yields a phosphorus credit of **40.0 lbs/year of removal.**

Again, from step 2, we determined the wetland will have a nitrogen removal rate of approximately 6.8%. With an estimated pollutant loading of 150,759 lbs/year the total potential nitrogen removal would be 10,252 lbs/year. But, due to the wetland area being less than 1% of the watershed area, we cannot take full credit for the load reduction, but rather a portion of the removal (0.019%), this yields a nitrogen credit of **194.8 lbs/year of removal.**

Lastly, from step 2, we determined the wetland will have a Total Suspended Solids (TSS) removal rate of approximately 6.8%. With an estimated pollutant loading of 11,355,168 lbs/year the total potential TSS removal would be 784,933 lbs/year. But, due to the wetland area being less than 1% of the watershed area, we cannot take full credit for the load reduction, but rather a portion of the removal (0.019%), this yields a TSS credit of **14,914 lbs/year of removal.**

Projects (May 2013)**

*Ben Brenman Pollutant Calculations*

# City of Alexandria, Virginia

---

## TECHNICAL MEMORANDUM

**DATE:** August 21, 2017

**SUBJECT:** Ben Brenman Pond Retrofit Pollutant Removal Calculations

**PREPARED BY:** City of Alexandria and URS

---

### **Purpose**

The City of Alexandria has been proactive in its approach to meeting the Chesapeake Bay Total Maximum Daily Load (TMDL) reductions specified in its Municipal Separate Storm Sewer System (MS4) permit. The City identified retrofitting its existing stormwater ponds as a first step towards meeting its required Chesapeake Bay TMDL reductions. A study commissioned by the City in August 2012 identified several wet ponds as candidates for water quality improvement retrofits. In December 2014, the City received a Stormwater Local Assistance Fund (SLAF) grant from the Virginia Department of Environmental Quality (VA DEQ) to help fund retrofitting Ben Brenman Pond to meet the design criteria for a Virginia Best Management Practice (BMP) Clearinghouse Level 2 Wet Pond.

The purpose of this technical memorandum is to describe the proposed retrofits to Ben Brenman Pond and to summarize the water quality benefits in terms of pounds of nitrogen, phosphorus, and total suspended solids.

### **Background**

Ben Brenman Pond, also referred to as Cameron Station Pond, is located in Ben Brenman Park and was originally constructed in the late 1990s as a stormwater management facility for the adjacent Cameron Station residential development. The pond receives drainage from approximately 255 acres of urban land in the City and is located in the Backlick Run watershed. Backlick Run is a tributary to Holmes Run which flows into Cameron Run and then the Potomac River. Approximately 179 acres (62 percent) of the drainage area for Ben Brenman Pond is impervious. The pond has a surface area of approximately 6.1 acres. In addition to serving as a stormwater management facility, the pond is a popular amenity to the Cameron Station residents, and Ben Brenman Park is heavily used by the local residents.

### **Proposed Retrofits**

Improvement to the existing Ben Brenman Pond will involve adding or retrofitting water quality features in order for the pond to meeting the Level 2 Wet Pond criteria as outlined in *Virginia DEQ Stormwater Design Specification No. 14 – Wet Pond, Version 1.9, dated March 1, 2011*.

Also, the retrofitted pond will provide water quality treatment for previously untreated stormwater in the Backlick Run watershed. Low flows from adjacent storm sewer systems will be diverted to the pond, which will provide water quality treatment for an additional 35 acres of regulated urban pervious and impervious land. The following sections provide detailed descriptions of the proposed retrofits.

### ***Pond and Forebay Treatment Volume***

A treatment volume of 24.5 acre-feet is required to meet Level 2 design criteria for the proposed 290 acres (after diversion of the additional 35 acres) being routed to the pond. As outlined in the Virginia DEQ Stormwater Design Specification for Wet Ponds, this treatment volume may consist of the volume entirely below the normal pool elevation, or a combination of the volume associated with extended detention above the normal pool elevation and the volume below the normal pool elevation. Currently, Ben Brenman Pond has a storage volume of approximately 23.8 acre-feet. After the pond is retrofitted, the treatment volume will increase to approximately 27 acre-feet.

### ***Multiple Cell Design***

Storage in the pond is currently provided within two cells: a sediment forebay and the larger main pond. Since the entire treatment volume will be contained below the normal pool elevation, the pond must have at least 3 internal cells to meet the Level 2 design criteria. The proposed design includes dividing the main pond cell into two cells using a weir structure across the narrowest portion of the pond.

### ***Sediment Forebay***

The sediment forebay is located on the west side of the pond and is separated from the main pond by an earthen berm. The design plans for the pond show a storage volume of 1.7 acre-feet for the forebay, which is approximately 0.5 acre-feet smaller than what the VA DEQ Stormwater Design Specification require for a Level 1 Wet Pond. Bathymetry conducted in Fall of 2012 indicates that a significant amount of sediment has accumulated in the forebay and the volume has been reduced to approximately 1.1 acre-feet. The proposed retrofit will dredge the existing forebay area to its original constructed volume and increase its volume to 3.7 acre-feet by shifting the location of the earthen weir further into the main pond. The volume of 3.7 acre-feet is consistent with the necessary volume for a sediment forebay of a Level 2 Wet Pond draining 290 acres. The retrofitted forebay will have a surface area of approximately 0.7 acres and account for 11% of the retrofitted pond's surface area.

### ***Aquatic Benches***

The existing pond does not include aquatic benches and the as-built plans confirmed that benches were not included in the original construction. The VA DEQ Stormwater Design Specification requires aquatic benches for a Level 2 Wet Pond and, as part of the retrofit, they will be constructed around the perimeter of the pond. The aquatic benches will be 5 feet wide around the perimeter of the sediment forebay and 10 feet wide around the perimeter of the two internal pond cells. They will also serve as a safety feature in the event of someone or something falls into the pond.

### ***Wetlands***

The VA DEQ Stormwater Design Specification for Wet Ponds specify that wetlands make up more than 10 percent of the pond area. Based on the *High Marsh Zone* definition found in *Virginia DEQ Stormwater Design Specification No. 13 – Constructed Wetlands*, those portions of the aquatic benches that are within 6 inches (above or below) the normal pool elevation will be considered wetland areas for the purpose of meeting this requirement. The proposed aquatic benches will provide approximately 0.4 acres of wetlands around the perimeter of the pond. In addition, floating wetlands will be added to the pond to meet the remaining 10 percent requirement. Together, the floating wetlands and aquatic bench wetlands will be equal to or greater than the 0.61 acres in size, given the pond surface area of approximately 6.1 acres.

### ***Aerators***

The existing pond contains two types of aerators. Originally, the pond was equipped with five aerators that pumped surface water in the form of fountains. Since the pond's construction, the City's park service added additional underwater aerators closer to the bottom of the pond. There is no plan to alter the existing aerators, and they will continue to remain in the pond.

### ***Upflow Filter***

Additional water quality improvements are provided by an existing upflow filter consisting of aggregate media. Although, it is not a requirement for a Level 1 or 2 design, the upflow filter will remain in the pond, and will not be altered as part of the retrofit design.

The City has noted improved water quality downstream from Ben Brenman Pond that has not been observed downstream from other City-owned retention ponds. This is believed to be at least partially attributed to the upflow filter. A similar upflow filter was added to the retrofit design for nearby Lake Cook, which the City is also retrofitting to help comply with its required Chesapeake Bay TMDL reductions.

## **Pollutant Calculations**

The following sections describe the methodologies and procedures used to compute the existing conditions and proposed retrofit conditions pollutant removals for Ben Brenman Pond. The procedures and methodologies found in Guidance Memo No. 15-2005 (GM15-2005), also referred to as the Chesapeake Bay TMDL Action Plan Guidance, were used in the pollutant calculations.

### ***Existing Conditions***

Ben Brenman Pond currently treats 255 acres of urban land due to the existing drainage infrastructure. Since the initial/existing pond was not built to meet the VA Stormwater BMP Clearinghouse standards, the existing pollutant removal rates for Ben Brenman Pond were calculated based on the Chesapeake Bay Program (CBP) established efficiencies for Wet Ponds and Wetlands provided in Table V.C.1 Chesapeake Bay

Program BMPs, Established Efficiencies of GM15-2005.

**Table V.C.1 – Chesapeake Bay Program BMPs, Established Efficiencies**

Chesapeake Bay Program BMPs	TN	TP	TSS
Wet Ponds and Wetlands	20%	45%	60%

Due to the existing forebay being substantially undersized and the lack of aquatic benches, a downward modification to the Chesapeake Bay Program efficiencies was used. Example V.D.2 in GM15-2005 provides an example of this same approach.

<i>Design Deficiency</i>	<i>Downward Modification</i>
Undersized Forebay	10%
No Aquatic Benches	10%
<b>TOTAL</b>	<b>20%</b>

After incorporating the downward modifications, the resultant adjusted pollutant removal efficiencies were as follows:

*Table 1: Ben Brenman Pond Existing Conditions Pollutant Load Reduction Efficiencies*

Pollutant	CBP Efficiency	Downward Modification	Adjusted Efficiency
<b>TN</b>	20%	20%	16%
<b>TP</b>	45%	20%	36%
<b>TSS</b>	60%	20%	48%

The Potomac River Basin 2009 edge of stream loading rates (lbs/acre/yr) can be found in the table below and in Table 2 b of GM15-2005.

*Table 2: Potomac River Basin Pollutant Loadings*

Pollutant	Land Use	Loading
Nitrogen	Reg Urb Imp	16.86
	Reg Urb Per	10.07
	Forest	5.29
Phosphorus	Reg Urb Imp	1.62
	Reg Urb Per	0.41
	Forest	0.13
Total Suspended Solids	Reg Urb Imp	1171.32
	Reg Urb Per	175.8
	Forest	79.91

It should be noted that the forest loading rate was not used in the calculations because no land within the pond's contributing drainage area was considered to be forested. There are areas of tree cover within the drainage area; however, the Chesapeake Bay Phase 6 TMDL Model categorizes these areas as Tree Canopy over Turf Grass or trees within 30' to 80' of non-road impervious surfaces where the understory is assumed to be turf grass or otherwise altered through compaction, removal of surface organic material, and/or

fertilization. Subsequently, the forest loading rates were not used in the existing condition or proposed retrofitted condition pollutant calculations.

Using the loadings and efficiencies determined above, the total nitrogen, total phosphorus, and total suspended solids removed by the existing pond were computed as shown below.

*Table 3: Ben Brenman Pond Existing Conditions Pollutant Load Reductions*

Area Treated (ac)	Impervious Treated (ac)	TN Load (lb/yr)	TP Load (lb/yr)	TSS Load (lb/yr)	TN Removed (lb/yr)	TP Removed (lb/yr)	TSS Removed (lb/yr)
255.11	144.1	3547.40	278.96	188,303	567.58	100.42	90,385.33

***Proposed Retrofitted Conditions***

The retrofitted pond will be designed to treat runoff from the 255 acres of urban land currently draining to it, as well as previously untreated runoff from an additional 35 acres of urban land that will be diverted to the pond.

After retrofitting, the pond will meet the Level 2 design criteria and will be eligible to receive the corresponding pollutant load reductions as presented in Table V.A.1 Virginia Stormwater BMP Clearinghouse BMPs, Established Efficiencies of GM15-2005. The Level 2 Wet Pond efficiencies for TN are 40% (30% in the coastal plain terrain) and for TP are 75% (65% in the coastal plain terrain). Some physiographic maps indicate that the majority of the City of Alexandria falls within the coastal plain region; however, a closer examination of the terrain and other determining characteristics suggests that the west side of the City more closely resembles the piedmont physiographic region. This includes the area where Ben Brenman Pond is located. As a result, the higher efficiencies associated with the non-coastal plain region are used to calculate the pollutant removals for the proposed retrofitted pond.

**Table V.A.1 - Virginia Stormwater BMP Clearinghouse BMPs, Established Efficiencies**

Practice Number	Practice	TN	TP
14	Wet Pond 1	30% (20%) <sup>2</sup>	50% (45%) <sup>2</sup>
	Wet Pond 2	40% (30%) <sup>2</sup>	75% (65%) <sup>2</sup>

<sup>2</sup>Lower nutrient removal in parentheses apply to wet ponds in coastal plain terrain

Since there are no established efficiencies for TSS in the Virginia Stormwater BMP Clearinghouse, Appendix V.A of GM15-2005 states that permittees should use the retrofit curves developed by the Bay Program or the CBP Established Efficiencies. Using the treatment volume of the proposed retrofitted pond (27 acre-feet) and the impervious area treated (179.1 acres), a treated runoff depth of 1.81 inches was computed. Using the equations for the retrofit curves, a TSS efficiency value of 77.7% was calculated.

*Table 4: Ben Brenman Pond Proposed Conditions Pollutant Load Efficiencies*

TN Efficiency	TP Efficiency	TSS Efficiency
40%	75%	77.7%

Using the loadings and efficiencies determined above, the total nitrogen, total phosphorus, and total suspended solids removed by the proposed retrofitted Level 2 pond were computed as shown below.

*Table 5: Ben Brenman Pond Proposed Conditions Pollutant Load Reductions*

Area Treated (ac)	Impervious Treated (ac)	TN Load (lb/yr)	TP Load (lb/yr)	TSS Load (lb/yr)	TN Removed (lb/yr)	TP Removed (lb/yr)	TSS Removed (lb/yr)
290.11	179.1	3785.05	335.66	229,299	1,514.02	251.74	178,119.26

***Incremental Difference in Pollutant Removals***

According to GM15-2005, permittees will calculate the credit associated with BMP enhancement, conversion, and restoration using an incremental rate.

The difference between the pollutant loads currently being removed by the existing pond and the loads which will be removed by the proposed retrofitted pond will be equal to the amount that can be associated with the project. Using the existing and proposed pollutant removals, the following values are the pollutant removals associated with the retrofit project and can be applied toward the City’s required Chesapeake Bay TMDL pollutant load reductions.

*Table 6: Ben Brenman Pond Incremental Pollutant Load Reductions (Credits)*

TN Removed (lb/yr)	TP Removed (lb/yr)	TSS Removed (lb/yr)
946.44	151.32	87,733.93

## **Appendix D**

### DEQ Correspondence and Action Plan Approval

*Phase 1*

*Phase 2*

*Phase 3*

*Phase 1: DEQ Correspondence and Action Plan  
Approval*

**From:** Brooks, Kelsey (DEQ) <Kelsey.Brooks@deq.virginia.gov>  
**Sent:** Monday, November 30, 2015 11:43 AM  
**To:** Jesse Maines  
**Subject:** VAR040057 Chesapeake Bay TMDL Action Plan - Additional Info Required

**Follow Up Flag:** Flag for follow up  
**Flag Status:** Flagged

Hello Jesse,

The Chesapeake Bay TMDL Action Plan for the City of Alexandria is currently under review. However, the following supplemental and/or clarifying information is necessary before the review of the Action Plan can be completed:

1. **Current Program and Legal Authority** – Please provide an affirmative statement that the permittee has sufficient legal authorities in place to meet the requirements of the TMDL.
2. **Service Area Delineation** – Please provide additional information on the method the permittee used to verify the forested acres that were excluded from the service area are greater than or equal to 900m<sup>2</sup> contiguous and are otherwise undeveloped.
3. **Gordon Recycling Limited Liability Corporation** – Our records indicate this facility is no longer active. The permittee should not exclude the lands draining from this site from its service area. Please revise the loading calculations appropriately.
4. **Historical BMPs** – Please provide the list of Historical BMPs that are being submitted for credit towards the TMDL. The list should include the following for each BMP:
  1. The date the BMP was installed
  2. The BMP type
  3. The method that was used to determine the BMP efficiency for each POC
  4. The BMP efficiency for each POC
  5. The reductions for each POC
5. **Lake Cook** – Please clarify if the lake is being expanded – it is unclear from the information provided how the lake is treating 15 acres in its present condition, but will treat 390 acres once it is upgraded.
6. **Eisenhower Pond 19** – The method the permittee used to determine the efficiencies used to determine the reductions for this pond is unclear from the information provided. Please provide the following information:
  1. The project's required reductions (total acres, percent impervious)
  2. The pond's total reductions
  3. The RD value that was used to determine the BMP's efficiencies
  4. The date the BMP was implemented.

In addition the TSS value provided in the description does not appear to match the value for TSS provided in Table 15. Please verify which value is correct.

7. **Cameron Station Pond** – Similarly to the Lake Cook project it is unclear to the Department why the pond is treating 94 acres prior to the ponds upgrade and 248.1 acres after the ponds upgrade if the facility's footprint is not increasing. Please provide additional information concerning the change in the pond's drainage area.
8. **Section 8.5** – Please provide the following information for each BMP summarized in Table 12:
  1. The date the BMP was installed
  2. The BMP type

3. The BMP efficiency for each POC

Please note the values in Table 12 do not appear to match the values in Table 15. Please verify which of the reported values are correct.

9. **Four Mile Run Stream Restoration** – Please note that it is not appropriate to apply the stream restoration protocols to streams that are tidally influenced. Based on the information provided in this section, it does not appear that the application of Protocol 3 is appropriate.
10. **Aggregate Method Applications** – Please note that the calculations the permittee provided in Table 7 do not appear to match the method provided in Guidance Memo 15-2005. The permittee should also take in to account the change in pervious acres when applying the aggregate accounting method. Please revise the provided calculations.
11. **Grandfathered Projects** – Please provide the list of grandfathered projects summarized in Table 8. Also, please provide the same information as requested in comment 3 for the BMPs that were included in Table 8.
12. **Public Comment Period** – This process should have been completed prior to the Action Plan submittal. If the permittee has posted the plan and solicited comments, please let us know. If not, this process should be undertaken as soon as possible.

Please provide the above information no later than **December 14, 2015**. If there is information in the Action Plan that explains these issues that has been overlooked, please let me know.

If you have any questions, please contact me at **804-698-4321** or [kelsey.brooks@deq.virginia.gov](mailto:kelsey.brooks@deq.virginia.gov).

Thank you,  
Kelsey Brooks

RE: City of Alexandria Response to DEQ Additional Information Request: MS4 VAR040057  
Chesapeake Bay TMDL 5% Action Plan

Ms. Brooks:

The City received the electronic correspondence entitled “VAR040057 Chesapeake Bay TMDL Action Plan – Additional Info Request” on November 30, 2015 in response to the City’s June 30, 2015 “Chesapeake Bay TMDL Action Plan for 5% Compliance” submitted to the Virginia Department of Environmental Quality (DEQ) on October 1, 2015 in compliance with the MS4 permit. The responses below are provided to address the additional information and/or clarifications requested to aid in review of the submitted action plan and will be considered as an addendum to the action plan.

Your request is provided in italics below in its entirety, along with the City’s responses in non-italics.

*Hi Jesse,*

*The Chesapeake Bay TMDL Action Plan for the City of Alexandria is currently under review. However, the following supplemental and/or clarifying information is necessary before the review of the Action Plan can be completed:*

1. ***Current Program and Legal Authority*** – *Please provide an affirmative statement that the permittee has sufficient legal authorities in place to meet the requirements of the TMDL.*

**Response:** Please note that Section 2 of the action plan contains detailed information illustrating the City’s ability to meet the requirements of the TMDL. The City affirms that it has sufficient legal authorities in place to meet the requirements of the TMDL.

2. ***Service Area Delineation*** – *Please provide additional information on the method the permittee used to verify the forested acres that were excluded from the service area are greater than or equal to 900m<sup>2</sup> contiguous and are otherwise undeveloped.*

**Response:** The City took a conservative approach to forested acres in delineating the MS4 service area. Forested areas located in Resource Protection Areas that are undeveloped and/or greater than 900 square meters were excluded. Forested areas draining to a regulated outfall that are not associated with an undeveloped RPA were considered as pervious, regardless of size.

3. ***Gordon Recycling Limited Liability Corporation*** – *Our records indicate this facility is no longer active. The permittee should not exclude the lands draining from this site from its service area. Please revise the loading calculations appropriately.*

**Response:** This property was previously not included in the service area and loading calculations due to the active VPDES permit and that the property does not drain to the delineated service area. In the absence of an active permit, the property continues to be excluded from the service area and loading calculations since it is not within the delineated service area.

4. **Historical BMPs** – Please provide the list of Historical BMPs that are being submitted for credit towards the TMDL. The list should include the following for each BMP:
1. The date the BMP was installed
  2. The BMP type
  3. The method that was used to determine the BMP efficiency for each POC
  4. The BMP efficiency for each POC
  5. The reductions for each POC

**Response:** Historical BMP data was included in Appendix B of the Chesapeake Bay TMDL Action Plan dated June 30, 2015 that included #2 (VA Clearinghouse name), #4 (TP only) and #5 above. The table did not contain the date installed since it was given that the BMPs presented were indeed installed between January 1, 2006 and June 30, 2009. The table has been revised to include the requested information. 2006 – 2009 BMPs are presented here in Attachment 1A, and 2009 – 2014 BMP credits (see below for offsets) are presented in Attachment 1B

5. ***Lake Cook*** – *Please clarify if the lake is being expanded – it is unclear from the information provided how the lake is treating 15 acres in its present condition, but will treat 390 acres once it is upgraded.*

**Response:** Lake Cook is a fishing pond created prior to 1992 that was not built for water quality and quantity purposes and does not conform to any standard. As such, the pond provides no water quality benefit. The 15 acres assigned to the pond is associated with a water park that was constructed on City property. The Lake Cook Retrofit Project was awarded a Stormwater Local Assistance Fund (SLAF) grant in FY2014, and includes the installation of a sediment forebay, aquatic bench and capture volume to treat approximately 390 acres to the 1” water quality standard.

6. ***Eisenhower Pond 19*** – *The method the permittee used to determine the efficiencies used to determine the reductions for this pond is unclear from the information provided. Please provide the following information:*
1. *The project’s required reductions (total acres, percent impervious)*
  2. *The pond’s total reductions*
  3. *The RD value that was used to determine the BMP’s efficiencies*
  4. *The date the BMP was implemented.*

*In addition the TSS value provided in the description does not appear to match the value for TSS provided in Table 15. Please verify which value is correct.*

**Response:** This regional wet pond implemented in “Eisenhower Block 19” treats additional acreage than required to meet the project’s water quality requirements. The project is currently under construction (Site Plan DSP2012-00028) by a private developer and slated for completion Spring 2016, so the date of installation requested per #4 is not yet applicable. City staff negotiated with the developer to provide reductions beyond those required for the development project. The following provides project information:

- The RD value is 0.40” based on  $RD = (1.81 \text{ ac-ft.})(12) / 53.68 \text{ Ia}$ , using the Bay Curves for a Stormwater Treatment (ST) practice since this is a wet pond.
- Bay Curve efficiencies: TP = 38%, TN = 22.5%, TSS = 45%
- Pond drains a total of 67.1 acres (53.68 impervious acres)
- Project considered new development with 0% impervious existing and about 50% proposed. (see lines #3 and #4 below)
- Reductions required to meet the 16% land cover condition was calculated by subtracting #5 from #3.
- Total reductions in #2 minus the required reductions for the project #6 (old technical criteria requirements and offset to 16%) equals the additional credits in #7 beyond those required by the development and credited towards Bay TMDL reductions.

The following table provides the requested information summarized for Pond 19.

		<b>Total Area (ac)</b>	<b>Ia (ac)</b>	<b>TP (lbs/yr)</b>	<b>TN (lbs/yr)</b>	<b>TSS (lbs/yr)</b>
1.	Total Drainage Area	67.1	53.68	117.80	812.83	55272.12
2.	Total Reductions Provided (TP=38%, TN=22.5%, TSS=45%)			44.8	182.9	24,872.5
3.	Development Site Post Conditions	2.88	1.45	3.30	22.80	1550.11
4.	Existing Site Conditions	2.88	0	0.33	2.27	154.05
5.	16% Land Cover Condition	2.88	0.46	1.27	8.78	596.94
6.	Total Required Reductions to Meet 16% Land cover			2.03	14.02	953.17
<b>7.</b>	<b>Additional Credits Reductions (#2 - #6)</b>			<b>42.7</b>	<b>168.9</b>	<b>23,919.3</b>

7. **Cameron Station Pond** – Similarly to the Lake Cook project it is unclear to the Department why the pond is treating 94 acres prior to the ponds upgrade and 248.1 acres after the ponds upgrade if the facility’s footprint is not increasing. Please provide additional information concerning the change in the pond’s drainage area.

**Response:** The Cameron Station Pond was originally designed in the 1990’s as a Level 1 pond to the ½” standard for the Cameron Station project, which drained approximately 100 acres from the project and an additional 119.4 acres draining to the pond, equaling a total of 219.4 acres draining to the pond in this configuration. The proposed retrofit will enhance the pond to a Level 2 design standard, which will include increasing the size of the forebay, create two cells, and enhance the aquatic bench. Additionally, the project includes diverting an additional 33ac to the pond for treatment.

As stated in the action plan, this project will not likely be constructed before June 30, 2018 and were not included in summarized strategies to comply with the 5% target reductions of the current MS4 permit cycle. The information in the action plan was based on an outdated approach. The table below presents current information on this retrofit.

<b>Cameron Pond Specification (Note: Proposed conditions includes 33- acres of offsite area to be treated)</b>	<b>TP (lbs/yr)</b>	<b>TN (lbs/yr)</b>	<b>TSS (lbs/yr)</b>
Existing Level I Wet Pond, collects 137.3 acres impervious and 82.1 acres turf (total 219 acres)	169	727	79,294.8
Proposed Level II Wet Pond, which will collect 160.9 acres impervious and 91.9 acres turf (total 252.8 acres)	296	1,129	138,833.2
<b>Water Quality Treatment Achieved through this Retrofit (Proposed minus Existing Conditions)</b>	<b>127</b>	<b>402</b>	<b>59,588.4</b>

8. **Section 8.5** – Please provide the following information for each BMP summarized in Table 12:
1. The date the BMP was installed
  2. The BMP type
  3. The BMP efficiency for each POC

Please note the values in Table 12 do not appear to match the values in Table 15. Please verify which of the reported values are correct.

**Response:** The Table in question is related to the Retrofits on City Property that have already been implemented towards the target reductions. The requested information is included in Attachment 2. The revised Table 15 is provided below.

9. **Four Mile Run Stream Restoration** – Please note that it is not appropriate to apply the stream restoration protocols to streams that are tidally influenced. Based on the information provided in this section, it does not appear that the application of Protocol 3 is appropriate.

**Response:** The Four Mile Run Stream Restoration is a floodplain reconnection project that closely aligns with the goals of the Expert Panel’s protocol 3 for floodplain reconnection. This project meets all of the basic qualifying criteria and protocol-specific criteria set forth in the Expert Panel report. The tidal limit for Four Mile Run is approximately at the Mount Vernon Bridge, which is only about 500 feet upstream of this project. Because the primary goal of the project was floodplain reconnection and the project meets all of the basic and protocol specific qualifying conditions, we believe that protocol 3 does apply to this stream restoration project.

10. **Aggregate Method Applications** – Please note that the calculations the permittee provided in Table 7 do not appear to match the method provided in Guidance Memo 15-2005. The permittee should also take in to account the change in pervious acres when applying the aggregate accounting method. Please revise the provided calculations.

**Response:** The revised information is provided in Attachment 3.

11. **Grandfathered Projects** – Please provide the list of grandfathered projects summarized in Table 8. Also, please provide the same information as requested in comment 3 for the BMPs that were included in Table 8.

**Response:** The list of Grandfathered BMP Credits is proved in Attachment 4A and Grandfather Project Offsets is provided in Attachment 4B.

12. **Public Comment Period** – This process should have been completed prior to the Action Plan submittal. If the permittee has posted the plan and solicited comments, please let us know. If not, this process should be undertaken as soon as possible.

**Response:** The City provided for a public comment period on the draft Action Plan prior to finalizing on June 30, 2015. The below provides additional information on the process:

- A public notice was placed in the Alexandria Times/Gazette inviting the public to learn about and comment on the draft by attending the May 18, 2015 Environmental Policy Commission (EPC) Public Meeting.
- A presentation based on this draft will be provided during the May 18, 2015 EPC Public Meeting, inviting the EPC and members of the community to comment on the draft.
- Solicitation of public comment by posting the draft action plan on the City website with contact information for receipt of comment.
- Solicitation of public comment through posting in the June 5, 2015 City Manager's Report on the City's website online.
- Public comment period was picked up by AlexandriaNews.org (a very well-read online news source) and circulated on June 5, 2015 email alert and online posting.
- Finally, the Final action plan was placed on the City Council docket for September 8, 2015; where the recommendation to submit the June 30, 2015 action plan to DEQ was passed by consensus.

Please provide the above information no later than **December 14, 2015**. If there is information in the Action Plan that explains these issues that has been overlooked, please let me know.

Thanks for this opportunity to provide clarifying information for the action plan to facilitate your review. As presented in the action plan and here in this response to your request, the 5% goal of the action plan – including 2009-2014 offsets and grandfathered projects – is nearly achieved through credits from Post-2009 BMPs from redevelopment. Factoring in the reductions for 2006-2009 Historical BMPs exceeds the requirement by nearly 200%. Based on the above clarifications, the following table (revised from Table 15 in the action plan) summarizes the City's requirements and reductions:

Reduction Strategies	N (lbs)	100% Goal <sup>2</sup>	P (lbs)	100% Goal <sup>2</sup>	TSS (lbs/yr)	100% Goal <sup>2</sup>
2006-2009 BMPs	1305.10	17.2	158.00	15.48	150,452.00	8.69
Post-2009 BMPs	110.24	1.5	14.88	4.44	17,051.59	4.59
Regional Facilities – Lake Cook	1586.97	20.9	163.25	15.79	131,334.00	15.2
Regional Facilities – Pond 19	168.90	2.2	42.70	1.52	23,919.30	1.35
Retrofits on City Property	17.57	0.2	2.67	1.48	2,804.69	0.12
Urban Stream Restoration – Four Mile Run	194.80	2.6	40.00	3.87	14,914.00	1.73
<b>Total Proposed Reductions</b>	<b>3364.54</b>	<b>44.5</b>	<b>280.10</b>	<b>42.58</b>	<b>273,612.33</b>	<b>31.68</b>
<i>Total Required Reductions (3 permit cycles)</i>	<i>7,597.00</i>	<i>100%</i>	<i>1,004.40</i>	<i>100%</i>	<i>861,936.64</i>	<i>100%</i>

1. Assumes all grandfathered projects to be offset this permit cycle.
2. 100% goal is based on L2 scoping.

Please note that the City will provide annual compliance reporting on the implementation of strategies to meet the City’s Bay TMDL targets per the requirements of the MS4 general permit and DEQ’s Guidance. Please feel free to contact me at [jesse.maines@alexandriava.gov](mailto:jesse.maines@alexandriava.gov) or 703-746-4643 should you have any additional questions.

Sincerely,

Jesse E. Maines, MPA, CPESC

RE: Virginia Pollutant Discharge Elimination System (VPDES) MS4 Permit VAR040057, City of Alexandria, Chesapeake Bay TMDL Action Plan Approval

Dear Mr. Jinks:

The Department of Environmental Quality (DEQ) has reviewed the Chesapeake Bay TMDL Action Plan received on October 1, 2015 in accordance with Section I.C of the General VPDES Permit for Discharges of Stormwater from Small Municipal Separate Storm Sewer Systems (MS4). Based on this review, DEQ has determined that the items included in the Chesapeake Bay TMDL Action Plan are consistent with the permit requirements; however, additional information is required. Additional information was received on December 14, 2015.

**The Chesapeake Bay TMDL Action Plan is provisionally approved and is considered an enforceable part of the MS4 Program Plan.** This provisional approval is conditioned upon DEQ's receipt and review of requested revisions to the Chesapeake Bay TMDL Action Plan as communicated by DEQ staff (attached). Please submit the required revisions by January 12, 2016. After review DEQ will provide the final approval of the Chesapeake Bay TMDL Action Plan.

Thank you for your cooperation through the TMDL Action Plan review and approval process. Please contact Kelsey Brooks at (804) 698-4321 or at [kelsey.brooks@deq.virginia.gov](mailto:kelsey.brooks@deq.virginia.gov) if you have any questions.

Sincerely,

A handwritten signature in black ink that reads 'Allan Brockenbrough II'.

Allan Brockenbrough II, P.E.  
Manager, Office of VPDES Permits

**From:** Brooks, Kelsey (DEQ)  
**Sent:** Tuesday, December 29, 2015 1:33 PM  
**To:** Jesse Maines  
**Subject:** RE: VAR040057 Chesapeake Bay TMDL Action Plan - Additional Info Required

Hi Jesse,

Thank you for sending this additional information. We have a few follow up questions/comments:

1. As I mentioned in an email sent earlier today, the submission appears to be missing attachment 3. Please send that attachment.
2. We are unable to recreate the values in the summary table. If we add the reductions for each strategy provided in the table, we calculate the following values:

	TN (lbs/yr)	TP (lbs/yr)	TSS (lbs/yr)
Total Reductions	3383.58	421.5	340475.58

Please clarify whether the total proposed reductions provided in the addendum are correct or need to be updated.

If you have any questions, please let me know. Please provide this information no later than **January 12, 2016**.

Thank you,  
Kelsey

**To:** Jesse Maines  
**Subject:** VAR040057 Chesapeake Bay TMDL Action Plan - Additional Info Required

Hello Jesse,

The Chesapeake Bay TMDL Action Plan for the City of Alexandria is currently under review. However, the following supplemental and/or clarifying information is necessary before the review of the Action Plan can be completed:

1. **Current Program and Legal Authority** – Please provide an affirmative statement that the permittee has sufficient legal authorities in place to meet the requirements of the TMDL.
2. **Service Area Delineation** – Please provide additional information on the method the permittee used to verify the forested acres that were excluded from the service area are greater than or equal to 900m<sup>2</sup> contiguous and are otherwise undeveloped.
3. **Gordon Recycling Limited Liability Corporation** – Our records indicate this facility is no longer active. The permittee should not exclude the lands draining from this site from its service area. Please revise the loading calculations appropriately.
4. **Historical BMPs** – Please provide the list of Historical BMPs that are being submitted for credit towards the TMDL. The list should include the following for each BMP:
  1. The date the BMP was installed
  2. The BMP type
  3. The method that was used to determine the BMP efficiency for each POC
  4. The BMP efficiency for each POC
  5. The reductions for each POC
5. **Lake Cook** – Please clarify if the lake is being expanded – it is unclear from the information provided how the lake is treating 15 acres in its present condition, but will treat 390 acres once it is upgraded.
6. **Eisenhower Pond 19** – The method the permittee used to determine the efficiencies used to determine the reductions for this pond is unclear from the information provided. Please provide the following information:
  1. The project's required reductions (total acres, percent impervious)
  2. The pond's total reductions
  3. The RD value that was used to determine the BMP's efficiencies
  4. The date the BMP was implemented.

In addition the TSS value provided in the description does not appear to match the value for TSS provided in Table 15. Please verify which value is correct.

7. **Cameron Station Pond** – Similarly to the Lake Cook project it is unclear to the Department why the pond is treating 94 acres prior to the ponds upgrade and 248.1 acres after the ponds upgrade if the facility's footprint is not increasing. Please provide additional information concerning the change in the pond's drainage area.
8. **Section 8.5** – Please provide the following information for each BMP summarized in Table 12:
  1. The date the BMP was installed
  2. The BMP type
  3. The BMP efficiency for each POC

Please note the values in Table 12 do not appear to match the values in Table 15. Please verify which of the reported values are correct.

9. **Four Mile Run Stream Restoration** – Please note that it is not appropriate to apply the stream restoration protocols to streams that are tidally influenced. Based on the information provided in this section, it does not appear that the application of Protocol 3 is appropriate.
10. **Aggregate Method Applications** – Please note that the calculations the permittee provided in Table 7 do not appear to match the method provided in Guidance Memo 15-2005. The permittee should also take in to account

the change in pervious acres when applying the aggregate accounting method. Please revise the provided calculations.

11. **Grandfathered Projects** – Please provide the list of grandfathered projects summarized in Table 8. Also, please provide the same information as requested in comment 3 for the BMPs that were included in Table 8.
12. **Public Comment Period** – This process should have been completed prior to the Action Plan submittal. If the permittee has posted the plan and solicited comments, please let us know. If not, this process should be undertaken as soon as possible.

Please provide the above information no later than **December 14, 2015**. If there is information in the Action Plan that explains these issues that has been overlooked, please let me know.

If you have any questions, please contact me at **804-698-4321** or [kelsey.brooks@deq.virginia.gov](mailto:kelsey.brooks@deq.virginia.gov).

Thank you,  
Kelsey Brooks

RE: City of Alexandria Response to DEQ Additional Information Request: MS4 VAR040057  
Chesapeake Bay TMDL 5% Action Plan

Ms. Brooks:

The City received an electronic letter regarding the “Virginia Pollutant Discharge Elimination System (VPDES) MS4 Permit VAR040057, City of Alexandria, Chesapeake Bay TMDL Action Plan Approval” dated December 29, 2015 and signed by Allan Brockenbrough II, P.E. This letter was in response to the City’s “Chesapeake Bay TMDL Action Plan for 5% Compliance” and the December 14, 2015 submittal of additional information based on a request from the Virginia Department of Environmental Quality (DEQ). The letter provided provisional approval of the City’s Chesapeake Bay TMDL Action Plan conditioned upon DEQ’s receipt and review of requested information, which is provided herein.

The responses below are provided to address the additional information and/or clarifications requested by DEQ staff in the December 29, 2015 provisional approval letter and will be considered as an addendum to the Action Plan. Your request is provided in italics below in its entirety, along with the City’s responses in non-italics. With this additional information and clarification, we look forward to receiving DEQ’s Final Approval of the Chesapeake Bay TMDL Action Plan.

*Hi Jesse,*

*Thank you for sending this additional information. We have a few follow up questions/comments.*

- 1. As I mentioned in an email I sent earlier today, the submission appear to be missing attachment 3. Please send the attachment.*

**Response:** Attachment 3 was inadvertently left off the previous response and is attached to this letter.

- 2. We are unable to recreate the values in the summary table. If we add the reductions for each strategy provided in the table, we calculate the following values:*

	TN (lbs/yr)	TP (lbs/yr)	TSS (lbs/yr)
Total Reductions	3383.58	421.5	340475.58

*Please clarify whether the proposed reductions provided in the addendum are correct or need to be updated.*

**Response:** The proposed reductions provided in the December 14, 2015 response letter needed to be updated. The table below has been updated and the values match the total proposed reductions you outlined above.

<b>Reduction Strategies</b>	<b>N (lbs)</b>	<b>100% Goal<sup>2</sup></b>	<b>P (lbs)</b>	<b>100% Goal<sup>2</sup></b>	<b>TSS (lbs/yr)</b>	<b>100% Goal<sup>2</sup></b>

RE: Virginia Pollutant Discharge Elimination System (VPDES) MS4 Permit  
VAR040057, City of Alexandria, Chesapeake Bay TMDL Action Plan Approval

Dear Mr. Jinks:

The Department of Environmental Quality (DEQ) has reviewed the Chesapeake Bay TMDL Action Plan received on October 1, 2015 in accordance with Section I.C of the General VPDES Permit for Discharges of Stormwater from Small Municipal Separate Storm Sewer Systems (MS4). Additional information was received November 19, 2015 and January 7, 2016.

As submitted, the action plan will result in the following annual reduction of pollutants of concern in the Potomac River Basin:

Pollutant of Concern	Annual Load Reduction (lb/yr)	Percentage of L2 Reduction Achieved After Implementation	Percentage of New Source Reduction Achieved After Implementation
Total Nitrogen	3,383.58	44.44%	5%
Total Phosphorus	421.50	39.01%	5%
Total Suspended Solids	340,475.58	39.24%	5%

***The Chesapeake Bay TMDL Action Plan is hereby approved and is an enforceable part of the MS4 Program Plan.*** The approved action plan is based on the 2000 Urbanized Area as designated by the U.S. Census Bureau; and reductions were calculated based on land use data from 2009. Please note that additional reductions may be required to address loads from expanded urbanized area as a result of the 2010 Census in accordance with Section II.C.5 of the MS4 General Permit.

Please note any modifications to the Chesapeake Bay TMDL Action Plan shall be made in accordance with the Program Plan Modification Section of the MS4 General Permit (Section II.F).

As provided by Rule 2A:2 of the Supreme Court of Virginia, you have thirty (30) days from the date you received this decision within which to appeal this decision by filing a notice of appeal in accordance with the Rules of the Supreme Court of Virginia with the Director, Virginia Department of Environmental Quality.

Please contact Kelsey Brooks at (804) 698-4321 or at [kelsey.brooks@deq.virginia.gov](mailto:kelsey.brooks@deq.virginia.gov) if you have any questions.

Sincerely,

Allan Brockenbrough II, P.E.  
Manager, Office of VPDES Permits

RE: City of Alexandria Response to Calculation Table in DEQ Approval Letter: MS4 VAR040057  
Chesapeake Bay TMDL 5% Action Plan

Ms. Brooks:

The City received an electronic letter regarding the “Virginia Pollutant Discharge Elimination System (VPDES) MS4 Permit VAR040057, City of Alexandria, Chesapeake Bay TMDL Action Plan Approval” dated January 12, 2016 and signed by Allan Brockenbrough II, P.E. This letter provided approval of the City’s “Chesapeake Bay TMDL Action Plan for 5% Compliance.”

We revisited the calculations related to the grandfathered projects and realized that the required pollutant reductions needed to be updated based on each project situation. The updated grandfathered calculations are attached. As a result, values for the “Percentage of L2 Reduction Achieved” also changed (see table below). This table follows the format and calculation methods that you previously provided.

Please keep in mind that the City’s requirement for projects to meet the Water Quality Volume Default (1/2” treatment over the site’s entire impervious surface) is a more stringent requirement beyond the application of the average land cover condition. Because of this, grandfathered projects achieved more reductions than would be expected if only the average land cover condition were applied.

***Summary - Annual Reduction of Pollutants of Concern (lb/yr)***

<b>Pollutant of Concern</b>	<b>Total Reductions from BMPs</b>	<b>Special Condition 6 Req'd Reductions - Table 3b</b>	<b>Total Req'd Reductions - All Cycles</b>	<b>Special Condition 7 New Sources Reductions</b>	<b>Special Condition 8 Grandfathered Reductions</b>	<b>BMP Removal to Meet L2</b>	<b>Percent of L2 Achieved</b>
Total Nitrogen	3,383.58	379.85	7,597.03	1.63	72.79	3,309.16	43.56%
Total Phosphorus	421.50	50.22	1,004.40	0.29	-12.61	433.81	43.19%
Total Suspended Solids	340,475.58	43,096.83	861,936.64	238.92	-19,327.02	359,563.68	41.72%

As noted in our January 8, 2016 response letter, the City will provide annual compliance reporting on the implementation of strategies to meet the City's Bay TMDL targets per the requirements of the MS4 general permit and DEQ's Guidance.

I agree that the best way to proceed is with a revised approval letter with an updated calculation table. Please feel free to contact Joni Calmbacher at [joni.calmbacher@alexandriava.gov](mailto:joni.calmbacher@alexandriava.gov) or 703-746-4174 should you have any additional questions.

Sincerely,

A handwritten signature in blue ink, appearing to read "Jesse E. Maines".

Re: Review of VAR040057 Municipal Separate Storm Sewer System (MS4) Chesapeake Bay Total Maximum Daily Load (TMDL) Action Plan for Achieving 40% Reduction Requirements

*Transmitted electronically:* [mark.jinks@alexandriava.gov](mailto:mark.jinks@alexandriava.gov)

Dear Mr. Jinks:

The Department of Environmental Quality (DEQ) has completed the review of the Chesapeake Bay TMDL action plan submitted in accordance with 9VAC25-890-40 Part II.A.11 of the MS4 General Permit. DEQ has no additional questions at this time.

Please note that permittees utilizing street cleaning as part of their Chesapeake Bay TMDL action plan should be aware of new pollution reduction calculation requirements that will take effect after June 30, 2022 in accordance with Guidance Memo No, GM-20-2003 (Appendix V.G).

Also, note that any modifications to the Chesapeake Bay TMDL Action Plan shall be summarized in your annual report in accordance with Part I.C.4 of the MS4 General Permit.

If you have any questions please contact me at [Jeffrey.selengut@deq.virginia.gov](mailto:Jeffrey.selengut@deq.virginia.gov) or (804) 698-4265.

Sincerely,

RE: Chesapeake Bay TMDL Phase 3 Action Plan

Dear Ms. Hagerdon,

The City of Alexandria is pleased to submit the *Phase 3 Chesapeake Bay Total Maximum Daily Load (TMDL) Action Plan* in accordance with the City's Municipal Separate Storm Sewer System (MS4) General Permit. The Action Plan is publicly available on the City's Chesapeake Bay webpage at [www.alexandriava.gov/stormwater-management/chesapeake-bay](http://www.alexandriava.gov/stormwater-management/chesapeake-bay).

Per the requirements of the MS4 General Permit, the City provided public notice from August 29 to September 16, 2024, and incorporated feedback into the Action Plan. The City advertised for public notice in the August 29 – September 4, 2024, edition of the Alexandria Gazette Packet. Staff presented the Action Plan to the Environmental Policy Commission on September 16, 2024, and to the Mayor and City Council during the October 22, 2024, Legislative session where it received unanimous approval for submission.

Please contact me or Jesse Maines at [jesse.maines@alexandriava.gov](mailto:jesse.maines@alexandriava.gov) or 703.746.4643 with any questions.

Sincerely,

City Council Submission Approval**

**From:** [Alexandria eNews](#)  
**To:** [Jessica Lassetter](#)  
**Subject:** City Invites Public Comment on Chesapeake Bay Action Plan for Stormwater Pollution Reduction Targets  
**Date:** Thursday, August 22, 2024 1:41:34 PM

---

The City of Alexandria invites the public to provide comments on the Draft Phase 3 Chesapeake Bay Total Maximum Daily Load (TMDL) Action Plan (Bay Action Plan). The Bay Action Plan contains strategies for the City to meet stormwater pollution reduction targets to help clean up the Chesapeake Bay.

Bay cleanup targets are mandated through the [City's Municipal Separate Storm Sewer System \(MS4\) General Permit](#), which regulates discharges of stormwater from the City's storm sewer system. The General Permit requires the development and implementation of a Bay Action Plan which includes strategies to reduce pollution entering the Bay from stormwater runoff. The General Permit is issued in five-year cycles by the [Virginia Department of Environmental Quality \(VDEQ\)](#).

The current General Permit requires the development and implementation of a Phase 3 Chesapeake Bay TMDL Action Plan to meet 100 percent of the pollution reduction targets on or before June 31, 2028.

Beginning Thursday, August 29, public comments can be made via email to [MS4ProgramPlan@alexandriava.gov](mailto:MS4ProgramPlan@alexandriava.gov) or online using the form available on the [City's Chesapeake Bay webpage](#).

Comments may also be dropped off or mailed to:

Transportation and Environmental Services  
Stormwater Management Division  
Attn: Chesapeake Bay TMDL Action Plan  
2900-B Business Center Drive  
Alexandria, VA, 22314.

The deadline for public comment is September 16, 2024.

Once reviewed, the Phase 3 Bay Action Plan will be finalized and posted to the [City's Chesapeake Bay webpage](#) by November 1, 2024.

To request reasonable disability accommodation, contact [Jessica.lassetter@alexandriava.gov](mailto:Jessica.lassetter@alexandriava.gov) or call 703.746.6499, Virginia Relay 711

**City of Alexandria  
Public Notice**

**City Invites Public Comment on the Phase 3 Chesapeake Bay TMDL  
(Total Maximum Daily Load) Action Plan**

The City's Municipal Separate Storm Sewer System (MS4) General Permit regulates discharges of stormwater from the City's system and is issued by the Virginia Department of Environmental Quality (VDEQ). The permit requires the development and implementation of a Phase 3 Chesapeake Bay Total Maximum Daily Load (TMDL) Action Plan to reach pollution reduction targets to help clean up the Bay.

While the Phase 2 Action Plan focused on strategies to meet 40% of the nitrogen and phosphorus pollution reduction targets by June 30, 2024, the Phase 3 Action Plan includes additional strategies to meet 100% of the target dates no later than June 30, 2028.

The Draft Phase 3 Chesapeake Bay TMDL Action Plan is available to view at alexandriava.gov/go/2873.

The public is invited to comment in writing on the Draft Phase 3 Chesapeake Bay TMDL Action Plan via email to MS4ProgramPlan@alexandriava.gov or online at alexandriava.gov/go/2873. Comments may also be dropped off or mailed to:

Transportation and Environmental Services  
Stormwater Management Division  
Attn: Chesapeake Bay TMDL Action Plan  
2900-B Business Center Drive  
Alexandria, VA 22314

The deadline for public comment is September 16, 2024. Comments submitted by mail must be postmarked on or before this deadline.

Following receipt and incorporation of public comment, the Phase 3 Chesapeake Bay TMDL Action Plan will be finalized and posted to the City website by November 1, 2024.

For more information about this and other TMDLs, visit the City's Total Maximum Daily Loads webpage at alexandriava.gov/Stormwater

News

Tons of Trucks

The popular City of Alexandria event "Tons of Trucks" returns on Saturday, Sept. 21, from 10 a.m. to 2 p.m. at Chinquapin Park, 3210 King St. This event will occur rain or shine.

Attendees of all ages are invited to explore and get behind the wheel of their favorite City vehicles, meet the staff who help build, maintain, serve, and protect the community, and learn about the vehicles they use. Other activities include an art project with the City's Mobile Art Lab, giveaways, photo opportunities, and food truck vendors.

Visitors are invited to take free DASH Bus transportation or use Capital Bikeshare to get to the event. Onsite valet services will be provided to attendees looking to park their bikes, scooters, and strollers.

Visit alexandriava.gov/GOAlex for more information on alternative transit options.

Driving to the event? Parking is available at Alexandria City High School, 3330 King St.; the First Baptist Church, 2932 King St.; and Oakland Baptist Church, 3408 King St.

New this year and in celebration of the City's 275th anniversary, admission is now FREE. The City will also provide a sensory-friendly hour for the first 60 minutes of the event, 10 a.m.-11 a.m.

For additional information, visit alexandriava.gov/rpca/tons-of-trucks-20

**Mentors Wanted.** Two creative programs that help transform the lives of Alexandria's preteens are seeking volunteer mentors. SOHO, which stands for "Space of Her Own," and "Space of His Own," serves vulnerable fifth graders in Alexandria. The programs pair men and women with youth in need of positive adult role models, to help support and guide youth in making healthy choices and succeeding in school and in life. Visit [www.spaceofherown.org](http://www.spaceofherown.org) and [www.spaceofhisown.org](http://www.spaceofhisown.org). For more information on how to become a SOHO mentor, contact Sarah Maroney at [sarah.maroney@alexandriava.gov](mailto:sarah.maroney@alexandriava.gov) or phone at 703-746-4687.

**Farmer's Market Volunteers Needed.** To volunteer for the Farmer's Markets, email Brian Morreale, [brianmorreale@gmail.com](mailto:brianmorreale@gmail.com)

**SUPPORT GROUPS**  
Postpartum Support Virginia sponsors a free, bi-monthly support group for women suffering depression and/or anxiety during pregnancy or in the first year following

**EPC REGULAR MEETING**  
**City Hall, Conference Room 2000**  
**September 16, 2024, 7:30 – 9:30 PM**

- 7:30 – 7:35 Welcome & Introductions
- 7:35 – 7:45 Public Comment
- 7:45- 8:05 CB TMDL Action Plan, Stormwater presentation
- 8:05-8:25 OCA Community Engagement/Comms update presentation – Yulia Fernandez Marcos
- 8:25-9:15 FY25 Legislative Priority Discussion
- Review - League of Conservation Voters 2025 Leg Agenda
  - Review - Last year’s EPC Leg Priorities
  - Del Alfonso Lopez conversation
  - TBD – Alx City Lobbyist perspective
- 9:15-9:30 Administrative Items
- **Approval** of Meeting Minutes for June 17, 2024
  - **Reports** from Commissioners/Staff
  - **EAP SteerCo Subgroup** update
  - **EPC Chair’s** update on meetings with parallel orgs across NoVa and relevant Alx Commissions/Boards
  - **Approval of** EPC FY25 Calendar
- 9:30 Adjourn

# City of Alexandria

*301 King St., Room 2400  
Alexandria, VA 22314*

## **Action Docket - Final**

**Tuesday, October 22, 2024**

**7:00 PM**

**Council Chamber**

**City Council Legislative Meeting**

The October 22, 2024 Legislative Meeting of the Alexandria City Council is being held in the Council Chamber (301 King Street, Alexandria, Virginia, 22314) and electronically. Members of the City Council and staff are participating either in-person or from a remote location through a video conference call on Zoom webinar. The meeting can be accessed by government channel 70, streaming on the City's website, and can be accessed via Zoom by the following link:

**Webinar ID: 992 8230 9630**

**Webinar Passcode: 230062**

**Dial-in number: 301-715-8592**

**Registration :**

**[https://zoom.us/webinar/register/WN\\_3r5rSHffTDKWSDayd55Wwg](https://zoom.us/webinar/register/WN_3r5rSHffTDKWSDayd55Wwg)**

If you use the Zoom webinar application, please be sure you have updated the application to the latest version for the best results. If you are unable to access the Zoom webinar, please use the Dial-In number to access the meeting.

**\*\*\*PLEASE LOG-IN EARLY IF POSSIBLE\*\*\***

**Links:**

**Meeting Agenda and Live Webcast**

The meeting will be webcast live and video and audio recordings will be available a few days after the meeting.

**Zoom Registration Form**

If you wish to use Zoom to watch the meeting or to address Council, you must register first.

Submission of written statements is encouraged. Please verify the meeting date on the City's website. If you have prepared statement or written comments for the record you may email it to the City Clerk at [CouncilComment@alexandriava.gov](mailto:CouncilComment@alexandriava.gov).

**\*\*\*\*\***

Individuals requiring translation services should contact the City Clerk and Clerk of Council at [gloria.sitton@alexandriava.gov](mailto:gloria.sitton@alexandriava.gov) or at 703.746.4550. We request that you provide a 48-hour notice so that the proper arrangements may be made. Please specify the language for translation when you make the request.

**Las personas que requieran servicios de traducción deben comunicarse con**

el Secretario de la Ciudad y el Secretario del Consejo en gloria.sitton@alexandriava.gov o al 703.746.4550. Le solicitamos que proporcione un aviso de 48 horas para que se puedan hacer los arreglos necesarios. Por favor, especifique el idioma de traducción cuando realice la solicitud.

\*\*\*\*\*

## I. OPENING

### 1. Calling the Roll.

*Mayor Wilson called the meeting to order and City Clerk called the roll. All members of City Council were present.*

### 2. Approval of Electronic Participation Resolution (if needed).

### 3. Closed Session (if needed).

### 4. Moment of Silence and Pledge of Allegiance

*City Council observed a moment of silence and recited the Pledge of Allegiance.*

## II. PROCLAMATIONS AND RECOGNITIONS

### 5. [25-2479](#) Presentation of a Proclamation Recognizing Red Ribbon Week in the City of Alexandria.

*City Council endorsed the proclamation.*

### 6. [25-2509](#) Presentation of a Proclamation Recognizing October as Cybersecurity Awareness Month.

*City Council endorsed the proclamation.*

## III. Oral Reports from Members of Council on Boards, Commissions, and Committees.

### [25-2537](#)

- Council of Governments (COG) Transportation Planning Board (TPB) (Councilman Aguirre)
- Commission on Aging (Councilman Aguirre)
- Library Board (Councilman Aguirre)
- Alexandria Campaign on Adolescent Pregnancy (ACAP)(Councilmember Bagley and Councilman Aguirre)
- Virginia Railway Express (VRE) (Councilmember Bagley)

*City Council gave the reports.*

#### IV. Oral Report from the City Manager.

7. [25-2475](#) Fall 2024 City Council Priorities Initiatives Updates

*City Council received updates on the five priorities.*

#### V. ACTION DOCKET

##### Regular Consent Calendar (8-9)

8. [25-2465](#) Consideration of a Grant Application to the Supreme Court of Virginia (Specialty Dockets) on behalf of the Alexandria Recovery Court

9. [25-2466](#) Consideration of a Grant Application to the Substance Abuse and Mental Health Services Administration on behalf of the Alexandria Recovery Court

*City Council approved the consent calendar. The approval was as follows:*

*8. City Council: (1) retroactively approved a grant application up to \$75,000 for the Alexandria Recovery Court ("ARC"); and (2) authorized the City Manager to execute all necessary documents that may be required.*

*9. City Council: (1) approved a grant application up to \$126,225 for program supplies, client funds (transportation, medical services, housing, etc.), and drug testing at the Alexandria Recovery Court; and (2) authorized the City Manager to execute all necessary documents that may be required.*

#### VI. ACTION MATTERS

10. [25-2460](#) Consideration of a Request to Approve the Phase 3 Chesapeake Bay Total Maximum Daily Load Action Plan for 100% Compliance for Submittal to Virginia Department of Environmental Quality.

*10. City Council: (1) approved the submission of the Phase 3 Chesapeake Bay Total Maximum Daily Load 100% Action Plan; and (2) authorized the City Manager to execute the necessary documents that may be required.*

#### VII. ORDINANCES AND RESOLUTIONS

11. [25-2513](#) Consideration of a Resolution to Support a Grant Application to the Virginia Community Flood Preparedness Fund Program to implement the Valley Drive Storm Drain Improvements Flood Action Alexandria capital project.  
[ROLL-CALL VOTE]

*City Council adopted: (1) the resolution to support a Round 5 Virginia Community Flood Preparedness Fund (CFPF) grant application; and (2) authorized the City Manager to*

*submit this resolution and enter into any agreements that may be required to receive these funds should the requested be approved. (RES. NO. 3251)*

## **VIII. OTHER**

### **12. Oral Reports and Oral Presentations by Members of City Council.**

- 1. Councilman Chapman reported that the Deputy Mayor from Caen, Frances visited Alexandria to meet with officials and attend the event honor General Lafayette's visit to City 250 years ago.*
- 2. Councilman Aguirre reported that Trevon Jenifer, Paralympic medalist visited the Dunbar Alexandria Boys and Girls Club recently.*
- 3. Councilman Aguirre reported that visited a kindergarten class at Jefferson-Houston Elementary School and read a book during Hispanic Heritage Month.*
- 4. Councilman Aguirre reported that Mayor Wilson participated in a panel at George Mason University as part of initiative looking regional elected officials.*
- 5. Councilman Aguirre reported that the attended a celebration at Patrick Henry Elementary School recognizing Hispanic Heritage Month. He also attended an event at Beatley Library honoring Hispanic Heritage Month.*
- 6. Councilman Aguirre reported that he attended an event at the Charles Houston Recreation Center honoring Alexandria native Lucky Elliott.*
- 7. Councilman Aguirre reported that attended book debut event featuring Supreme Court Justice Katanji Brown Jackson.*
- 8. Councilman Aguirre reported that he attended the Annual Conference for Virginia Municipal League in Virginia Beach.*
- 9. Councilman Aguirre reported that at the WMATA headquarters hosted the Board for MWAA at the Metro integrated command center.*
- 10. Councilman Aguirre reported that he participated on a panel at American University discussing the upcoming election and the atmosphere around the current election.*
- 11. Councilman Aguirre reported that he attended the Community Foundations Rise the Region Gala last week.*
- 12. Councilman Aguirre reported that he and Vice Mayor Jackson attended the Spooky Mad Science fest at Patrick Henry Elementary School, focusing on STEM education.*
- 13. Vice Mayor Jackson reported that MakerFaire was held on Sunday at Alexandria City High School.*
- 14. Vice Mayor Jackson reported that the Torpedo Factory Arts Center is holding the CyberArts exhibit focusing on cyber security through arts.*
- 15. Vice Mayor Jackson reported that she and her colleagues attended a reception*

*honoring Lafayette and there will be a historical marker placed at 301 South St. Asap.*

*16. Vice Mayor Jackson reported that the Carpenter's Shelter held its 20th Anniversary chili off at the Birchmere.*

*17. Vice Mayor Jackson reported that Paws in the Park was held at Oronoco Bay Park to raise money and awareness for the work of the Alexandria Welfare League.*

*18. Vice Mayor Jackson recognized those who were honored at the reception held by the Chamber of Commerce at their recent Best in Business Awards ceremony.*

*19. Vice Mayor Jackson also reported the Beautification Commission held their annual Beautification Awards ceremony at the Garden Alexandria.*

*20. Councilman Chapman reported that he attended the African Impact Awards held in New Carrollton, MD, with the 5K Run taking place in the City.*

**13. [25-2492](#)**

Consideration of City Council Schedule.

*City Council: (1) received the updated City Council Look Ahead Schedule which includes: the Joint City Council/School Board CIP Work Session will be held Monday, November 25 at 6:00 p.m. at the ACPS headquarters, 1340 Braddock Place, School Board Room; and (2) approved the City Council Calendar from October 2024 through July 2025.*

**IX. ADJOURN.**

\*\*\*\*\*

*The meeting was as adjourned at 8:26 p.m.*

\*\*\*\*\*

*NOTE: The action docket is a summary of Council's meeting deliberations prepared largely for staff follow up. Formal minutes of the meeting, when approved by Council become the official record of the meeting of Council decisions made at the meeting.*

City of Alexandria, Virginia

---

MEMORANDUM

**DATE:** OCTOBER 16, 2024

**TO:** THE HONORABLE MAYOR AND MEMBERS OF CITY COUNCIL

**THROUGH:** JAMES F. PARAJON, CITY MANAGER /s/

**FROM:** ADRIANA CASTAÑEDA, DIRECTOR, TRANSPORTATION AND ENVIRONMENTAL SERVICES

**DOCKET TITLE:**

Consideration of a Request to Approve the Phase 3 Chesapeake Bay Total Maximum Daily Load Action Plan for 100% Compliance for Submittal to Virginia Department of Environmental Quality.

---

**ISSUE:** The City of Alexandria is required to submit the Phase 3 Chesapeake Bay Total Maximum Daily Load (TMDL) 100% Action Plan to the Virginia Department of Environmental Quality (VDEQ) by November 1, 2024, to comply with the City's Municipal Separate Storm Sewer System (MS4) general permit.

**RECOMMENDATION:** That City Council:

1. Approve the submission of the Phase 3 Chesapeake Bay TMDL 100% Action Plan; and
2. Authorize the City Manager to execute the necessary documents that may be required.

**BACKGROUND:** In an effort to clean up the Chesapeake Bay, localities such as the City of Alexandria have been given targets for reducing nitrogen, phosphorus, and sediment. These goals are enforced through the City's General Virginia Pollution Discharge Elimination System (VPDES) Permit for Discharges of Stormwater from Small Municipal Separate Storm Sewer Systems (MS4) through the implementation of Water Quality Best Management Practices (BMPs) within three, five-year cycles beginning with the 2013 - 2018 MS4 general permit. The 2013 - 2018 MS4 general permit required the City to meet 5% of the targeted reduction. The subsequent 2018 - 2023 MS4 general permit required an additional 35% be met of the targets for a total 40%. Given the increasing requirements in these successive permits, the City adopted an internal policy to exceed the early requirements to be ahead of the mandatory targets for each cycle, including this last permit cycle. As a result, the City achieved the 40% reduction requirements in the 2018 - 2023 MS4 general permit well ahead of

schedule, and met over 70% of the reduction targets by the end of the 2018 - 2023 MS4 general permit cycle. In September 2019, City Council approved submission of the City's Phase 2 Chesapeake Bay TMDL 40% Action Plan.

The City's current 2023 - 2028 MS4 general permit requires the City to develop and implement the "Chesapeake Bay Total Maximum Daily Load (TMDL) Action Plan for the remaining 60% Compliance" to meet 100% of the reduction targets by June 30, 2028. This Phase 3 Action Plan must be submitted to VDEQ by November 1, 2024.

**DISCUSSION:** Given the City's more aggressive internal goals to outpace the targets in the MS4 general permit, the City has already exceeded 100% of the required phosphorus reduction targets and reached 80% of the nitrogen reduction targets. The Phase 3 Action Plan considers the completion of the Landmark Mall Redevelopment, the North Potomac Yard Redevelopment, and the typical annual redevelopment that would be completed prior to June 30, 2028, to meet the Phase 3 deadline. By taking into consideration these redevelopment projects, only 8% of the nitrogen target remains to be achieved using the specific strategies discussed below. This will include implementation of BMPs and the application of pollution reduction credits through bi-lateral trading for any remaining gap. Sediment reduction targets were removed from the 2023 - 2028 MS4 general permit VDEQ; therefore, is not included as part of the Phase 3 Chesapeake Bay TMDL Action Plan. However, the City has also surpassed 100% of the sediment reduction target with current reductions.

The Phase 3 Chesapeake Bay TMDL Action Plan is cumulative and builds on the 5% reductions required in Phase 1 Action Plan and the 35% reductions required in Phase 2 Action Plan to require 100% of the target reductions by June 30, 2028. The Phase 3 Chesapeake Bay TMDL Action Plan identifies strategies to comply with 100% of the pollution reduction targets for nitrogen and phosphorus in the MS4 general permit reductions. Similar to Phase 1 and Phase 2 Action Plans, the Phase 3 Action Plan includes potential strategies to take advantage of changes in technologies, site conditions, and emerging opportunities that form a comprehensive, "all of the above" approach.

The City's primary strategies to meet the Phase 3 requirements include:

- **Redevelopment:** Projects must implement stormwater BMPs to meet the state requirements, as incorporated into the City's Zoning Ordinance, as well as the City's more stringent stormwater quality requirements in the Zoning Ordinance. Because of these requirements, the City has made great strides in exceeding the target reductions for each phase. While all redevelopment counts towards the required target reductions, two noteworthy redevelopment projects scheduled to be completed for Phase 3 will have a significant impact in these reductions, the projects include the Landmark Mall Redevelopment and North Potomac Yard Redevelopment.
- **BMP Retrofits:** Identification of opportunities to install Green Infrastructure BMPs on City property and within the City Right-of-Way, and potential regional facilities that treat multiple properties.
- **Urban Stream Restoration:** In December 2023 the Lucky Run Stream Restoration project reached substantial completion. The pollution reduction credits achieved through this project are included in the Phase 3 Chesapeake Bay TMDL Action Plan which covers FY24 - FY28. This project helps to reduce nitrogen and phosphorous from entering the Chesapeake Bay, provides bank stabilization, protects an exposed sanitary sewer pipe, and includes native plantings to help further stabilize the area and create habitat.

- **Bi-Lateral Trading:** The City and Alexandria Renew Enterprises (Alex Renew) entered into an agreement (the “Outfall Transfer Agreement”) which state that any annual reductions in nitrogen, phosphorus, and sediment achieved with the River Renew project above annual reductions needed by Alex Renew may be used by the City towards Chesapeake Bay TMDL targets in the City’s MS4 general permit. Integrating these two water quality efforts will create efficiencies for capital investments and facilitate the use of sustainable and comprehensive solutions to minimize the overall additive cost to the City ratepayers that bear sanitary sewer costs to implement the RiverRenew project and pay the Stormwater Utility fee.

Per the MS4 2023-2028 General Permit (Part II, Section 13), the City is required to provide an opportunity for public comment on the additional BMPs proposed in Phase 3. The City complied with this permit requirement by advertising the draft Phase 3 Chesapeake Bay TMDL Action Plan for 100% Compliance for public comment from August 29, 2024, to September 16, 2024, and responses submitted during that period were considered and incorporated into the plan as applicable.

**FISCAL IMPACT:** As noted above, the City has surpassed the cumulative Phase 3 target reduction goals for phosphorus and about 8% of the goal remaining for nitrogen. Prior year funding and funding in the currently approved 10 Year (FY 2025 to FY 2034) Capital Improvement (CIP) derived from the City’s Stormwater Utility Fee revenues as well as potential State grant revenues will allow the City to achieve the remaining reductions by the end of Phase 3 (June 30, 2028). No additional funding beyond what is already in the City’s 10 CIP is contemplated at present to meet the Action Plan goals and pollution reduction compliance targets in the City’s MS4 general Permit.

**ATTACHMENTS:**
