ASBESTOS INSPECTION and ABATEMENT CERTIFICATION

Effective July 1, 1993, the Virginia Uniform Statewide Building code requires all buildings constructed before 1985 that are to be renovated or demolished be inspected for the presence of asbestos-containing materials with appropriate response actions undertaken, subject to exemptions. The following form is to be completed by all applicants for Building Permits for renovations, alterations, repairs, or demolition. A completed form will contain one of the areas checked below and must be signed by the owner or authorized owner's agent to be a part of the building permit application.

I _____ certify that the construction project located at
(Printed name of building owner or Agent)

(Building address, including floor, room and/or suite number)

I claim the following exemption as it relates to this project:

- The above building is a single family dwelling, or is a residential housing building containing four or fewer units, and is exempt from asbestos inspection requirements. **NOTE: This exemption does not apply if the proposed renovation or demolition is for commercial or public development purposes;** or
- The combined amount of regulated asbestos-containing material involved in the renovation or demolition is less than 260 linear feet on pipes, or less than 160 square feet on other facility components, or less than 35 cubic feet off facility components where length or area could not be measured previously, and is exempt from asbestos inspection requirements.
- This building is exempt from asbestos certification requirements as the original building permit was issued after January 1, 1985.

If the building permit application is for repair or replacement of roofing, floor covering, or siding materials and the use is not a school, the asbestos inspection requirements may be satisfied by checking one of the following:

- The materials to be repaired or replaced are assumed to contain asbestos and that appropriate response actions will be accomplished by a licensed asbestos contractor or a licensed RFS contractor; or
- An inspection of the materials to be removed was accomplished by an RFS inspector and analysis of the sample showed no asbestos to be present.

If none of the above applies, one of the remaining must be checked to complete this form:

- The affected area of the above building to be renovated or demolished has been inspected for the presence of asbestos by an individual licensed to perform such inspections and that no asbestos-containing materials were found; or
- Asbestos-containing materials in the affected areas of the above building to be renovated or demolished will be subject to appropriate response actions in accordance with all applicable laws related to asbestos abatement in accordance with §36-99.7,

I further certify that the abatement area will not be re-occupied until any required response actions have been completed and final clearances have been measured. By requesting a final in section for this permit, I certify that the final clearance levels for re-occupancy of the abatement area shall be 0.01 or fewer asbestos fibers per cubic centimeter if determined by Phase Contrast Microscopy analysis (PCM) or 70 or fewer structures per square millimeter if determined by Transmission Electron Microscopy analysis (TEM).
