

Speed Cushion Installation Guidelines and Considerations*

- Placement of a raised speed cushion shall be at least:
- 5 feet from any driveway or curb cut on a local street (additional clearance may be required for curb cuts utilized by trucks)
- 15 feet clearance from either side of a hydrant
- 150 feet from an intersection that is controlled by a stop sign or signal
- 75 feet from an uncontrolled intersection
- 150 feet from a curve in the roadway
- 250 feet minimum spacing between cushions
- 2 feet from a manhole or utility cover on approach or 6 feet after the cushion
- Approval required from Alexandria Fire Department

*Detailed engineering analysis will be conducted for each project per the City's engineering team

[NACTO Urban Street Design Guidelines](#)

Existing speed humps and tables are grandfathered into this program but will be replaced with speed cushions with roadway resurfacing.
