Appendix A: Complete Survey Responses

Responses excluding “don’t know”

The following pages contain a complete set of responses to each question on the survey, excluding the “don’t know” responses. The percent of respondents giving a particular response is shown followed by the number of respondents (denoted with “N=”).

Table 1: Question 1

Please rate each of the following aspects of quality of life in Alexandria:	Excellent		Good		Fair		Poor		Total	
	%	N	%	N	%	N	%	N	%	N
Alexandria as a place to live	45%	N=260	46%	N=263	8%	N=47	1%	N=6	100%	N=576
Your neighborhood as a place to live	44%	N=254	38%	N=221	15%	N=86	3%	N=17	100%	N=577
Alexandria as a place to raise children	30%	N=126	47%	N=200	17%	N=73	6%	N=26	100%	N=425
Alexandria as a place to work	36%	N=141	47%	N=187	14%	N=57	3%	N=12	100%	N=396
Alexandria as a place to visit	47%	N=263	44%	N=249	7%	N=42	2%	N=9	100%	N=563
Alexandria as a place to retire	16%	N=67	30%	N=126	31%	N=129	24%	N=101	100%	N=423
The overall quality of life in Alexandria	28%	N=157	58%	N=331	12%	N=66	2%	N=12	100%	N=566

Table 2: Question 2

Please rate each of the following characteristics as they relate to Alexandria as a whole:	Excellent		Good		Fair		Poor		Total	
	%	N	%	N	%	N	%	N	%	N
Overall feeling of safety in Alexandria	31%	N=190	54%	N=338	14%	N=89	1%	N=6	100%	N=624
Overall ease of getting to the places you usually have to visit	24%	N=153	44%	N=275	25%	N=154	7%	N=46	100%	N=628
Quality of overall natural environment in Alexandria	21%	N=128	55%	N=338	22%	N=139	2%	N=15	100%	N=620
Overall “built environment” of Alexandria (including overall design, buildings, parks and transportation systems)	19%	N=119	52%	N=321	24%	N=150	5%	N=32	100%	N=623
Health and wellness opportunities in Alexandria	26%	N=146	49%	N=273	20%	N=113	4%	N=23	100%	N=555
Overall opportunities for education and enrichment	21%	N=114	51%	N=271	23%	N=123	5%	N=26	100%	N=534
Overall economic health of Alexandria	23%	N=130	54%	N=308	20%	N=117	3%	N=18	100%	N=573
Sense of community	19%	N=118	41%	N=251	33%	N=204	7%	N=45	100%	N=618
Overall image or reputation of Alexandria	33%	N=205	54%	N=332	11%	N=70	2%	N=9	100%	N=617
Historic character reflected in built environment, exhibits, and events	48%	N=294	40%	N=244	11%	N=69	1%	N=8	100%	N=615

Table 3: Question 3

Please indicate how likely or unlikely you are to do each of the following:	Very likely		Somewhat likely		Somewhat unlikely		Very unlikely		Total	
	%	N	%	N	%	N	%	N	%	N
Recommend living in Alexandria to someone who asks	55%	N=343	36%	N=225	5%	N=28	4%	N=26	100%	N=622
Remain in Alexandria for the next five years	42%	N=249	38%	N=228	10%	N=63	10%	N=60	100%	N=600

Table 4: Question 4

Please rate how safe or unsafe you feel:	Very safe		Somewhat safe		Neither safe nor unsafe		Somewhat unsafe		Very unsafe		Total	
	%	N	%	N	%	N	%	N	%	N	%	N
In your neighborhood during the day	72%	N=450	22%	N=140	4%	N=24	1%	N=9	0%	N=1	100%	N=625
In Alexandria’s downtown area (i.e., Old Town) during the day	77%	N=469	18%	N=109	3%	N=17	2%	N=10	0%	N=0	100%	N=605
In your neighborhood at night	42%	N=260	39%	N=240	10%	N=63	8%	N=50	1%	N=8	100%	N=621
In Alexandria’s downtown area (i.e., Old Town) at night	48%	N=282	39%	N=230	9%	N=53	4%	N=26	0%	N=2	100%	N=592

Appendix B: Benchmark Comparisons

Comparison Data

NRC’s database of comparative resident opinion is comprised of resident perspectives gathered in surveys from over 600 communities whose residents evaluated the same kinds of topics on The National Community Survey. The comparison evaluations are from the most recent survey completed in each community; most communities conduct surveys every year or in alternating years. NRC adds the latest results quickly upon survey completion, keeping the benchmark data fresh and relevant. The communities in the database represent a wide geographic and population range. The City of Alexandria chose to have comparisons made to the entire database and two subsets of similar jurisdictions from the database. The first subset included other jurisdictions near Washington, D.C. and the second subset consisted of jurisdictions across the nation with populations between 80,000 and 180,000 that were in close proximity to major metropolitan areas.

Interpreting the Results

Ratings are compared when there are at least five communities in which a similar question was asked. Where comparisons are available, four columns are provided in the table. The first column is Alexandria’s “percent positive.” The percent positive is the combination of the top two most positive response options (i.e., “excellent” and “good,” “very safe” and “somewhat safe,” etc.), or, in the case of resident behaviors/participation, the percent positive represents the proportion of respondents indicating “yes” or participating in an activity at least once a month. The second column is the rank assigned to Alexandria’s rating among communities where a similar question was asked. The third column is the number of communities that asked a similar question. The final column shows the comparison of Alexandria’s rating to the benchmark.

In that final column, Alexandria’s results are noted as being “higher” than the benchmark, “lower” than the benchmark or “similar” to the benchmark, meaning that the average rating given by Alexandria residents is statistically similar to or different (greater or lesser) than the benchmark. Being rated as “higher” or “lower” than the benchmark means that Alexandria’s average rating for a particular item was more than 10 points different than the benchmark. If a rating was “much higher” or “much lower,” then Alexandria’s average rating was more than 20 points different when compared to the benchmark.

Benchmark Database Characteristics	
Region	Percent
New England	3%
Middle Atlantic	5%
East North Central	15%
West North Central	13%

Appendix C: Detailed Survey Methods

The National Community Survey™ (The NCS™), conducted by National Research Center, Inc., was developed to provide communities an accurate, affordable and easy way to assess and interpret resident opinion about important local topics. Standardization of common questions and survey methods provide the rigor to assure valid results, and each community has enough flexibility to construct a customized version of The NCS.

Results offer insight into residents' perspectives about the community as a whole, including local amenities, services, public trust, resident participation and other aspects of the community in order to support budgeting, land use and strategic planning and communication with residents. Resident demographic characteristics permit comparison to the Census as well as comparison of results for different subgroups of residents. The City of Alexandria funded this research. Please contact Beth Murdock of the City of Alexandria at beth.murdock@alexandriava.gov if you have any questions about the survey.

Survey Validity

The question of survey validity has two parts: 1) how can a community be confident that the results from those who completed the questionnaire are representative of the results that would have been obtained had the survey been administered to the entire population? and 2) how closely do the perspectives recorded on the survey reflect what residents really believe or do?

To answer the first question, the best survey research practices were used for the resources spent to ensure that the results from the survey respondents reflect the opinions of residents in the entire community. These practices include:

- Using a mail-out/mail-back methodology, which typically gets a higher response rate than phone for the same dollars spent. A higher response rate lessens the worry that those who did not respond are different than those who did respond.
- Selecting households at random within the community to receive the survey to ensure that the households selected to receive the survey are representative of the larger community.
- Over-sampling multi-family housing units to improve response from hard-to-reach, lower income or younger apartment dwellers.
- Selecting the respondent within the household using an unbiased sampling procedure; in this case, the "birthday method." The cover letter included an instruction requesting that the respondent in the household be the adult (18 years old or older) who most recently had a birthday, irrespective of year of birth.
- Contacting potential respondents three times to encourage response from people who may have different opinions or habits than those who would respond with only a single prompt.
- Inviting response in a compelling manner (using appropriate letterhead/logos and a signature of a visible leader) to appeal to recipients' sense of civic responsibility.
- Providing a pre-addressed, postage-paid return envelope.
- Offering the survey in Spanish or other language when requested by a given community.
- Weighting the results to reflect the demographics of the population.

The answer to the second question about how closely the perspectives recorded on the survey reflect what residents really believe or do is more complex. Resident responses to surveys are influenced by a variety of factors. For questions about service quality, residents' expectations for service quality play a role as well as the "objective" quality of the service provided, the way the resident perceives the entire community (that is, the context in which the service is provided), the scale on which the resident is asked to record his or her opinion and, of course, the opinion, itself, that a resident holds about the service. Similarly a resident's report of certain behaviors is colored by what he or she believes is the socially desirable response (e.g., reporting tolerant behaviors toward "oppressed groups," likelihood of voting for a tax increase for services to poor people, use of alternative modes of travel to work besides the single occupancy vehicle), his or her memory of the actual behavior (if it is not a question speculating about future actions, like a vote), his or her confidence that he or she can be honest without suffering any negative consequences (thus the need for anonymity) as well as the actual behavior itself.

How closely survey results come to recording the way a person really feels or behaves often is measured by the coincidence of reported behavior with observed current behavior (e.g., driving habits), reported intentions to behave with observed future behavior (e.g., voting choices) or reported opinions about current community quality

with objective characteristics of the community (e.g., feelings of safety correlated with rates of crime). There is a body of scientific literature that has investigated the relationship between reported behaviors and actual behaviors. Well-conducted surveys, by and large, do capture true respondent behaviors or intentions to act with great accuracy. Predictions of voting outcomes tend to be quite accurate using survey research, as do reported behaviors that are not about highly sensitive issues (e.g., family abuse or other illegal or morally sanctioned activities). For self-reports about highly sensitive issues, statistical adjustments can be made to correct for the respondents' tendency to report what they think the "correct" response should be.

Research on the correlation of resident opinion about service quality and "objective" ratings of service quality vary, with some showing stronger relationships than others. NRC's own research has demonstrated that residents who report the lowest ratings of street repair live in communities with objectively worse street conditions than those who report high ratings of street repair (based on road quality, delay in street repair, number of road repair employees). Similarly, the lowest rated fire services appear to be "objectively" worse than the highest rated fire services (expenditures per capita, response time, "professional" status of firefighters, breadth of services and training provided). Resident opinion commonly reflects objective performance data but is an important measure on its own. NRC principals have written, "If you collect trash three times a day but residents think that your trash haul is lousy, you still have a problem."

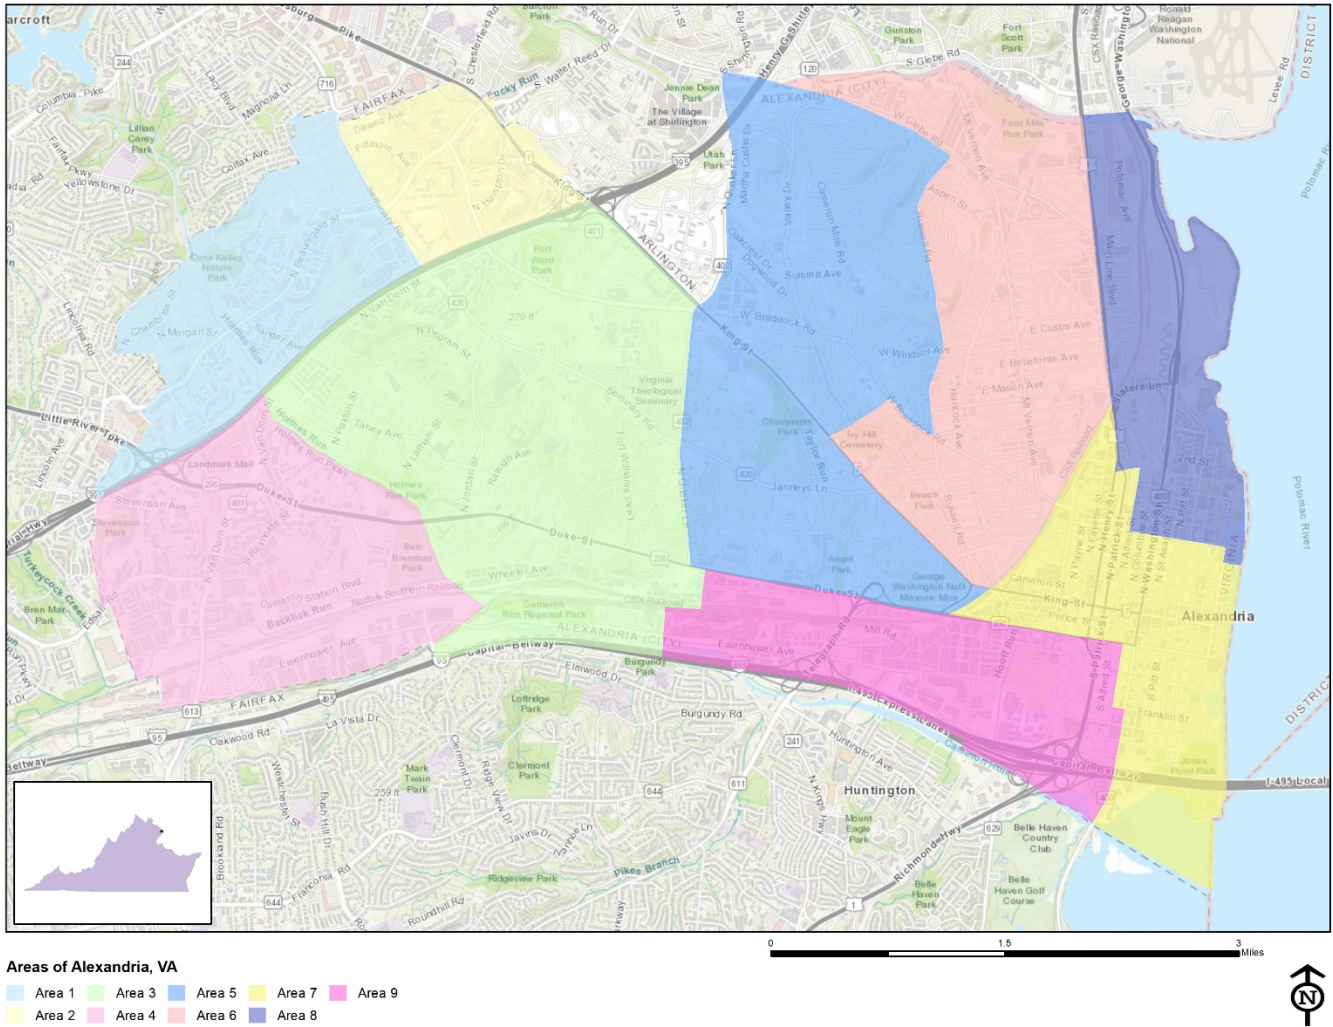

Selecting Survey Recipients

"Sampling" refers to the method by which households were chosen to receive the survey. All households within the City of Alexandria were eligible to participate in the survey. A list of all households within the zip codes serving Alexandria was purchased from Go-Dog Direct based on updated listings from the United States Postal Service. Since some of the zip codes that serve the City of Alexandria households may also serve addresses that lie outside of the community, the exact geographic location of each housing unit was compared to community boundaries using the most current municipal boundary file (updated on a quarterly basis) and addresses located outside of the City of Alexandria boundaries were removed from consideration. Each address identified as being within City boundaries was further identified as being within one of the nine areas.

To choose the 3,000 survey recipients, a systematic sampling method was applied to the list of households previously screened for geographic location. Systematic sampling is a procedure whereby a complete list of all possible households is culled, selecting every *N*th one, giving each eligible household a known probability of selection, until the appropriate number of households is selected. Multi-family housing units were selected at a higher rate as residents of this type of housing typically respond at lower rates to surveys than do those in single-family housing units. Figure 1 displays a map of the households selected to receive the survey. In general, because of the random sampling techniques used, the displayed sampling density will closely mirror the overall housing unit density (which may be different from the population density). While the theory of probability assumes no bias in selection, there may be some minor variations in practice (meaning, an area with only 15% of the housing units might be selected at an actual rate that is slightly above or below that).

An individual within each household was selected using the birthday method. The birthday method selects a person within the household by asking the "person whose birthday has most recently passed" to complete the questionnaire. The underlying assumption in this method is that day of birth has no relationship to the way people respond to surveys. This instruction was contained in the cover letter accompanying the questionnaire.

Figure 1: Location of Survey Recipients

Survey Administration and Response

Selected households received four mailings, one week apart, beginning on January 3, 2020. The first mailing was a prenotification postcard announcing the upcoming survey. The next mailing contained a letter from the City Manager inviting the household to participate, a questionnaire and a postage-paid return envelope. The third mailing contained a reminder letter, another survey and a postage-paid return envelope. The second cover letter asked those who had not completed the survey to do so and those who had already done so to refrain from turning in another survey. The final mailing was a reminder postcard. The survey was available in English, Spanish, Amharic and Arabic. Both cover letters and the reminder postcard contained paragraphs in Spanish, Amharic and Arabic instructing participants to complete the Spanish, Amharic or Arabic version of the survey online; respondents could opt to take the survey online in their language of preference. The City of Alexandria chose to augment their administration of The NCS with several additional services, including demographic subgroup comparisons, custom benchmark comparison and an expanded sample size. Completed surveys were collected over the following eight weeks.

About 3% of the 3,000 surveys mailed were returned because the housing unit was vacant or the postal service was unable to deliver the survey as addressed. Of the remaining 2,912 households that received the survey, 634 completed the survey, providing an overall response rate of 22%. Of the 634 completed surveys, all were completed in English and 277 were completed online. Additionally, responses were tracked by area; response rates by area ranged from 12% to 32%. The response rates were calculated using AAPOR’s response rate #2¹ for mailed surveys of unnamed persons.

¹ See AAPOR’s Standard Definitions here: [http://www.aapor.org/Standards-Ethics/Standard-Definitions-\(1\).aspx](http://www.aapor.org/Standards-Ethics/Standard-Definitions-(1).aspx) for more information

The National Community Survey™

Table 109: Survey Response Rates by Area

	Area 1	Area 2	Area 3	Area 4	Area 5	Area 6	Area 7	Area 8	Area 9	Overall
Total sample used	430	375	400	470	250	350	225	250	250	3,000

NE=Not eligible	11	16	6	13	4	10	11	6	11	88
Response rate: (I+P)/(I+P) + (R+NC+O) + (UH+UO)	15%	12%	21%	19%	32%	25%	32%	30%	22%	22%

Confidence Intervals

It is customary to describe the precision of estimates made from surveys by a “level of confidence” and accompanying “confidence interval” (or margin of error). A traditional level of confidence, and the one used here, is 95%. The 95% confidence interval can be any size and quantifies the sampling error or imprecision of the survey results because some residents’ opinions are relied on to estimate all residents’ opinions.²

The margin of error for the City of Alexandria survey is no greater than plus or minus four percentage points around any given percent reported for all respondents (634 completed surveys).

For subgroups of responses, the margin of error increases because the number of respondents for the subgroup is smaller.

Survey Processing (Data Entry)

Upon receipt, completed surveys were assigned a unique identification number. Additionally, each survey was reviewed and “cleaned” as necessary. For example, a question may have asked a respondent to pick two items out of a list of five, but the respondent checked three; in this case, NRC would use protocols to randomly choose two of the three selected items for inclusion in the dataset.

All surveys then were entered twice into an electronic dataset; any discrepancies were resolved in comparison to the original survey form. Range checks as well as other forms of quality control were also performed.

NRC used SurveyGizmo, a web-based survey and analytics platform, to collect the online survey data. Use of an online system means all collected data are entered into the dataset when the respondents submit the surveys. Skip patterns are programmed into system so respondents are automatically “skipped” to the appropriate question based on the individual responses being given. Online programming also allows for more rigid control of the data format, making extensive data cleaning unnecessary.

A series of quality control checks were also performed in order to ensure the integrity of the web data. Steps may include and not be limited to reviewing the data for clusters of repeat IP addresses and time stamps (indicating duplicate responses) and removing empty submissions (questionnaires submitted with no questions answered).

Survey Data Weighting

The demographic characteristics of the survey respondents were compared to those found in the 2010 Census and American Community Survey estimates for adults in the City of Alexandria. The primary objective of weighting survey data is to make the survey respondents reflective of the larger population of the community. The

² A 95% confidence interval indicates that for every 100 random samples of this many residents, 95 of the confidence intervals created will include the “true” population response. This theory is applied in practice to mean that the “true” perspective of the target population lies within the confidence interval created for a single survey. For example, if 75% of residents rate a service as “excellent” or “good,” then the 4% margin of error (for the 95% confidence interval) indicates that the range of likely responses for the entire community is between 71% and 79%. This source of uncertainty is called sampling error. In addition to sampling error, other sources of error may affect any survey, including the non-response of residents with opinions different from survey responders. Though standardized on The NCS, on other surveys, differences in question wording, order, translation and data entry, as examples, can lead to somewhat varying results.

The National Community Survey™

characteristics used for weighting were housing tenure, housing unit type, race, ethnicity and sex and age. No adjustments were made for design effects. The results of the weighting scheme are presented in the following table.

Table 110: Alexandria, VA 2020 Weighting Table

Characteristic	Population Norm	Unweighted Data	Weighted Data
Housing			
Rent home	57%	33%	51%
Own home	43%	67%	49%
Detached unit*	15%	21%	18%
Attached unit*	85%	79%	82%

Survey Data Analysis and Reporting

The survey dataset was analyzed using the Statistical Package for the Social Sciences (SPSS). For the most part, the percentages presented in the reports represent the “percent positive.” The percent positive is the combination of the top two most positive response options (i.e., “excellent” and “good,” “very safe” and “somewhat safe,” “essential” and “very important,” etc.), or, in the case of resident behaviors/participation, the percent positive represents the proportion of respondents indicating “yes” or participating in an activity at least once a month.

On many of the questions in the survey respondents may answer “don’t know.” The proportion of respondents giving this reply is shown in the full set of responses included in Appendix A. However, these responses have been removed from the analyses presented in the reports. In other words, the tables and graphs display the responses from respondents who had an opinion about a specific item. When a table for a question that only permitted a single response does not total to exactly 100%, it is due to the common practice of percentages being rounded to the nearest whole number.

Appendix D: Survey Materials

Dear Alexandria Resident,
It won't take much of your time to make a big difference!
Your household has been randomly selected to participate in a survey about your community. Your survey will arrive in a few days or you can complete the survey online here:

www.alexandriava.gov/ARS

and enter your unique password. Your password can be found above your address.

Thank you for helping create a better city!

Sincerely,

<p>La Municipalidad de Alexandria le invita a participar en esta encuesta comunitaria. Su hogar ha sido seleccionado al azar para contestarla y sus respuestas son completamente anónimas. Su encuesta llegará en unos días o puede contestarla en línea en: www.alexandriava.gov/ARS e ingresar su contraseña exclusiva. Puede hallar su contraseña arriba de su dirección. ¡Su opinión es muy importante para nosotros! ¡Gracias!</p>
<p>تدعوك مدينة الإسكندرية للمشاركة في هذا الاستقصاء المجتمعي. وقد تم اختيار منزلك عشوائياً للمشاركة مع العلم أن إجاباتك ستكون مجهولة الهوية تماماً. سيصلك نسخة من الاستقصاء في غضون أيام قليلة أو يمكنك إكمالها عبر الإنترنت من خلال زيارة الرابط www.alexandriava.gov/ARS وإدخال كلمة المرور الفريدة الخاصة بك. يمكن العثور على كلمة مرورك فوق عنوانك. رأيك مهم جداً بالنسبة لنا! شكراً جزيلاً!</p>

January 2020

Dear City of Alexandria Resident:

Please help us shape the future of Alexandria! You have been selected at random to participate in the 2020 Alexandria Community Survey.

Please take a few minutes to fill out the enclosed survey. Your participation in this survey is very important – especially since your household is one of a representative number of households being surveyed. Your feedback will help Alexandria make decisions that affect our city.

A few things to remember:

- **Your responses are completely anonymous.**
- In order to hear from a diverse group of residents, the adult 18 years or older in your household who most recently had a birthday should complete this survey.
- **You may return the survey by mail in the enclosed postage-paid envelope, or you can complete the survey online. Just go to: www.alexandriava.gov/ARS and enter your unique password. Your password can be found in the upper right-hand corner of this page.**

If you have any questions about the survey please call 703-746-4357.

To request a reasonable accommodation in completing this survey, due to limited English proficiency or disability, please call 703.746.4357.

Thank you for your time and participation!

Alexandria le invita a participar en esta encuesta comunitaria. Su hogar ha sido seleccionado al azar para contestarla y sus respuestas son completamente anónimas. ¡Su opinión es muy importante para nosotros! Para contestar la encuesta en línea en español, vaya al enlace siguiente y seleccione su idioma en el menú desplegable en el lado derecho de la encuesta. Puede hallar su contraseña en la esquina superior derecha de esta página. Para solicitar una adaptación razonable a fin de contestar este cuestionario, debido a que no domina bien el idioma inglés o tiene alguna discapacidad, llame al (703) 746-4357. ¡Muchas gracias!

The City of Alexandria 2020 Resident Survey

Please complete this survey if you are the adult (age 18 or older) in the household who most recently had a birthday. The adult's year of birth does not matter. Your responses are anonymous and will be reported in group form only. The City of Alexandria complies with Title VI of the Civil Rights Act of 1964 and Title II of the Americans with Disabilities Act, as amended. For an accommodation in completing this survey, please call the City at 703.746.4357.

1. Please rate each of the following aspects of quality of life in Alexandria:

	<i>Excellent</i>	<i>Good</i>	<i>Fair</i>	<i>Poor</i>	<i>Don't know</i>
Alexandria as a place to live.....	1	2	3	4	5
